

# DESIGN LOAD FOR WATER SUPPLY IN BUILDINGS

FUMITOSHI KIYA

SABURO MURAKAWA

1989

A.A. BALKEMA/ROTTERDAM

# Contents

PREFACE .....	vii
LIST OF SYMBOLS .....	xiii
CHAPTER 1. INTRODUCTION .....	1
1.1. Traditional Methods of Determining Design Load .....	1
1.2. New Ideas in Europe and the USA .....	6
1.3. Concepts in New Methods of Determining Design Load .....	15
1.4. Applications and Problems of Data .....	22
CHAPTER 2. BASIC THEORY OF DESIGN METHODS .....	25
2.1. Water Usage Behavior and Fixture Parameters .....	25
2.2. Probability Theory and Distribution Function .....	28
2.3. Queuing Theory .....	33
2.4. Monte Carlo Method and Simulation .....	38
CHAPTER 3. EVALUATION OF DESIGN LOAD BY THE SIMULATION METHOD .....	43
3.1. Optimum Number and Usage of Fixtures .....	43
3.2. Pattern of Water Usage .....	48
3.3. Simulation of Water Usage .....	52
3.4. Results of Calculations and their Applications .....	55
CHAPTER 4. DETERMINATION OF DESIGN LOAD BY THE PROBABILITY METHOD .....	65
4.1. Pattern of Water Usage .....	65

4.2.	Probability of Simultaneous Use .....	67
4.3.	Instantaneous Water Supply Load and Number of Simultaneous Uses .....	73
1)	Method of Calculation .....	73
2)	Number of simultaneous water uses .....	77
3)	Optimum number of sanitary fixtures .....	77
4)	Ratio of simultaneous use .....	81
5)	Instantaneous water supply load .....	84
4.4.	Hourly Water Supply Load .....	90
1)	Method of calculation .....	90
2)	Hourly water supply load .....	91
CHAPTER 5.	DATA NECESSARY FOR METHODS TO DETERMINE LOAD .....	95
5.1.	Outline of Data .....	95
5.2.	Office Buildings .....	95
5.3.	Apartment Buildings .....	103
5.4.	Theaters and Schools .....	107
CHAPTER 6.	WATER CONSUMPTION .....	142
6.1.	Object of Investigation .....	142
6.2.	Method of Investigation .....	143
1)	Planning the measurement .....	143
2)	Measurement methods .....	144
3)	Conclusions .....	147
6.3.	Results of Investigations on Water Consumption .....	158
1)	Office buildings .....	158
2)	Apartment buildings .....	161
3)	Hotels .....	169
4)	Shops .....	182
5)	Hospitals .....	184

6)	Universities, Junior colleges .....	184
7)	Theaters, cinema halls, etc. ....	185
6.4.	Results of the Investigations Regarding Hot Water Consumption .....	201
1)	Office buildings.....	201
2)	Apartment houses .....	215
3)	Hotels .....	216
4)	Shops .....	217
<b>CHAPTER 7. EXPERIMENTS ON WATER CONSUMPTION .....</b>		<b>231</b>
7.1.	Hydraulic Studies .....	231
7.2.	Factors Affecting Water Consumption .....	231
1)	Hydraulic parameters of water supply load .....	231
2)	Pattern of water discharge .....	236
7.3.	Discharge from Sanitary Fixtures and Coefficient of Resistance .....	244
1)	Method of experiment .....	244
2)	Discharge properties of fixtures .....	245
3)	Coefficient of resistance of fixtures .....	246
4)	Relative area of opening of a fixture .....	252
7.4.	Variation in Water Discharge due to Simultaneous Use .....	255
1)	Experiments on simultaneous use .....	255
2)	Variation in discharge quantity due to simultaneous use .....	258
<b>CHAPTER 8. IMPLICATIONS OF THE NEW DESIGN METHOD AND POSSIBILITIES .....</b>		<b>269</b>
8.1.	Design Load and System Design .....	269
8.2.	Problems of Water Saving .....	272
8.3.	Water Drainage Problem .....	274

8.4. Problems in Water Recycling .....	274
REFERENCES .....	279
INDEX .....	283
