CUR

Manual on the use of rock in coastal and shoreline engineering

CIRIA SPECIAL PUBLICATION 83

CUR REPORT 154

A.A.BALKEMA / ROTTERDAM / BROOKFIELD / 1991

Contents

List of Figures	xi
List of Tables	xxi
List of Boxes	xxiii
Glossary	xxv
Notation	xxix
1 INTRODUCTION	1-6
1.1 Background, use and approach	1
1.2 Use of the manual	2-6
1.2.1 Design process	2
1.2.2 Structure and contents of this manual	4
1.3 Structure types covered by this manual	6
2 PLANNING AND DESIGNING	7-66
2.1 Design process	7-31
2.1.1 Problem identification	7
2.1.2 Boundary conditions	7
2.1.3 Functional Analysis	12
2.1.4 Generation of alternative solutions	14
2.1.5 Comparison and selection	18
2.1.6 Final design and detailing	21
2.1.7 Cost Assessment	22
2.1.8 Quality Assurance	26
2.2 Structure types and failure modes	31-45
2.2.1 Structure types	31
2.2.2 Principal failure modes	33
2.2.3 Fault tree analysis	38
2.2.4 Risk-level assessment	44
2.3 Design approach	45-56
2.3.1 Deterministic approach	47
2.3.2 Probabilistic approach	48
2.4 Environmental assessment	56-66
2.4.1 Reasons for carrying out EA	56
2.4.2 EA as an integral part of the design process	56
2.4.3 Method of assessment	59
2.4.4 Additional sources of information	59
2.4.5 Assessing the impacts of the proposed works	61
2.4.6 Impacts from the choice of materials and construction	64
2.4.7 The Environmental Statement (ES)	66
3 MATERIALS	67-182
3.1 Rock types	68-76
3.1.1 Generation considerations	68

3.1.2	Evaluation of rock types at source	68
3.1.3	Alluvial, glacial and marine sources of rock materials	75
3.2	Properties and functions	76–113
3.2.1	Intrinsic properties	78
3.2.2	Production-affected properties	86
3.2.3	Execution-induced properties	101
3.2.4	Durability and armourstone degradation rates	106
3.3	Testing and evaluation	114–134
3.3.1	Size and weight gradations	115
3.3.2	Shape	117
3.3.3	Petrographic examination	118
3.3.4	Density and water absorption	118
3.3.5	Intact strength	122
3.3.6	Resistance to weathering	128
3.3.7	Block integrity	133
3.4	Production and handling	134–155
3.4.1	Resource appraisal	135
3.4.2	Production	136
3.4.3	Transportation	148
3.5	Other materials	155–169
3.5.1	Concrete	155
3.5.2	Industrial by-products	156
3.5.3	Grouts	157
3.5.4	Geotextiles	160
3.5.5	Composite materials	167
3.6	Quality control	169–182
3.6.1	Objective	169
3.6.2	Quality control in the quarry and during transportation	169
3.6.3	Quality control during construction	179
4	PHYSICAL SITE CONDITIONS AND DATA COLLECTION	183–233
4.1	Bathymetry and morphology	186
4.2	Hydraulic boundary conditions and data collection	186–227
4.2.1	Water levels	186
4.2.2	Deep-water wave conditions	194
4.2.3	Transformation of waves in shallow water	207
4.2.4	Seabottom orbital velocities	220
4.2.5	Currents	220
4.2.6	Ship-induced water movements	221
4.2.7	Joint probabilities	222
4.2.8	Modelling	226
4.3	Geotechnical boundary conditions and data collection	227–233
4.3.1	General aspects of planning a soil-investigation programme	228
4.3.2	Desk studies	229
4.3.3	Preliminary soil investigations	230
4.3.4	Detailed soil investigations	230
5	PHYSICAL PROCESSES AND DESIGN TOOLS	235–350
5.1	Hydraulic interactions	237–306
5.1.1	Governing parameters	237
5.1.2	Hydraulic response	246
5.1.3	Structural response	261
5.1.4	Physical and numerical modelling	304

5.2 Geotechnical interactions	307-350
5.2.1 Approach	307
5.2.2 Parameters	308
5.2.3 Scope of geotechnical aspects	313
5.2.4 Physical background	314
5.2.5 Modelling and simulation	319
5.2.6 Computer model types	325
5.2.7 Computer model applications	325
5.2.8 Practical formulae and engineering experience	327
5.2.9 Application of probabilistic analysis	348
6 STRUCTURES	351-478
6.1 Rubble-mound breakwaters	351-395
6.1.1 Definitions	352
6.1.2 Layout	354
6.1.3 General design considerations for breakwater cross-section	358
6.1.4 Structure-specific design aspects	361
6.1.5 Construction aspects	373
6.1.6 Cost aspects and project optimisation	383
6.2 Seawalls and shoreline protection structures	395-443
6.2.1 Definitions	396
6.2.2 Plan layout and overall concept selection	397
6.2.3 General considerations for cross-section design of rock coastal structures	413
6.2.4 Structure-specific design aspects	420
6.2.5 Construction aspects	440
6.3 Dam-face protection	443-453
6.3.1 Protection concept selection	443
6.3.2 General design considerations	445
6.3.3 Special design considerations	449
6.3.4 Special construction aspects	451
6.3.5 Measurement and cost aspects	452
6.3.6 Maintenance aspects	452
6.4 Gravel beaches	453-463
6.4.1 Design process	454
6.4.2 Coastal processes	455
6.4.3 Gravel beach profile	456
6.4.4 Construction and cost aspects	457
6.4.5 Monitoring and renourishment	460
6.4.6 Cost optimisation	461
6.5 Rockfill in offshore engineering	463
6.5.1 Principal design considerations	465
6.5.2 Construction aspects	476
6.5.3 Cost aspects	478
7 MAINTENANCE	479-487
7.1 Monitoring	479-484
7.1.1 Types of monitoring	480
7.1.2 Frequency of monitoring	481
7.2 Appraisal of structure performance	484-485
7.3 Repair/replacement construction methods	486-487

Appendices	
1 Model specification for quarried rock applications in coastal and shoreline engineering	489–507
2 Standards for quarried rock materials applications in coastal and shoreline engineering	509–530
3 Measurement of quarried rock in coastal and shoreline engineering	531–542
4 Hydraulic data measurement and instrumentation	543–550
5 Instrumentation for geotechnic data collection	551–570
6 Structure-monitoring techniques	571–583
7 European, British and Dutch legislation/authorities/designated sites relevant to environmental assessment of projects involving the use of rock in coastal and shoreline engineering	585–587
