

# **Water Supply Systems**

**State of the art and future trends**

*Edited by:*

**E. Cabrera and F. Martínez**

**Fluid Mechanics  
Group**

**Universidad Politecnica  
de Valencia (Spain)**

**Computational Mechanics Publications  
Southampton Boston**

## Contents

---

### I. FUNDAMENTALS

- |   |   |    |
|---|---|----|
| 1 | General overview of the problems in water supply systems.<br>The case of Spain<br><i>E. Cabrera, V. Espert. Polytechnic University of Valencia. Spain</i> | 3  |
| 2 | Demand forecasting in water supply systems<br><i>R. Gistau, M. García-Poveda. Canal Isabel II. Madrid. Spain</i>  | 21 |
| 3 | Hydraulic analysis of water distribution systems<br><i>D. J. Wood, J. E. Funk. University of Kentucky. USA</i>  | 41 |

### II. DESIGN

- |   |  |     |
|---|--|-----|
| 4 | Optimal design of water distribution networks<br><i>G. A. Walters. University of Exeter. U.K.</i><br><i>R. G. Cembrowicz. University of Karlsruhe. Germany</i>           | 89  |
| 5 | Modern concepts of a water distribution system. Policies for improvement of networks with shortcomings<br><i>I. Goulter. University of Central Queensland. Australia</i> | 119 |

### III. MODELS

- |   |   |     |
|---|---|-----|
| 6 | Mathematical modelling of water distribution systems in service<br><i>F. Martínez, J. García-Serra. Polytechnic University of Valencia. Spain</i> | 141 |
| 7 | Use and benefits of water distribution models<br><i>M. J. Stimson, M. R. Gwynne. Severn Trent Water Ltd. England</i>                              | 175 |

#### **IV. UNSTEADY STATE AND APPLICATIONS**

- |    |  |     |
|----|--|-----|
| 8  | Transient analysis of water supply networks<br><i>M. H. Chaudhry. Washington State University. USA</i>   | 197 |
| 9  | New trends in distribution research. Dynamic calculation and monitoring<br><i>J. Cohen. Amsterdam Municipal Waterworks. Holland</i>                | 211 |
| 10 | Network monitoring and the algorithmic location of leaks under steady and unsteady conditions<br><i>J. A. Liggett. Cornell University. NY. USA</i> | 251 |

#### **V. MONITORING AND AUTOMATION**

- |    |  |     |
|----|--|-----|
| 11 | Selection and use of control devices in water distribution networks<br><i>J. P. Tullis. Utah State University Foundation. USA</i>  | 273 |
| 12 | Automation levels in water supply systems. Measurement and control variables<br><i>E. Koelle. University of Sao Paulo. Brazil</i>  | 297 |
| 13 | Optimal control of water distribution networks. Technical survey and practical applications<br><i>P.A. Jarrige. SAFEGE. France</i> | 317 |

#### **VI. MANAGEMENT**

- |    |  |     |
|----|--|-----|
| 14 | Rehabilitation of potable water mains<br><i>L. Maine. British Gas plc, Newcastle. U.K.</i>   | 343 |
| 15 | GIS technology for management of water distribution networks<br><i>G. Tsakiris, M. Salahoris.<br/>Laboratory of Rural Technology. Athens. Greece</i>                     | 359 |
| 16 | Water losses versus optimal life of a water distribution system's network<br><i>M. Andrés. Aguas de Valencia, S.A. Spain<br/>F. Planells. Council of Valencia. Spain</i> | 379 |
| 17 | The cost of water. Different policies for determining water prices<br><i>F. Porta. Sociedad General de Aguas de Barcelona, S.A. Spain</i>                                | 411 |
