## PREFACE

CHAPTER 1. FROZEN GROUND	1
1.1 Frozen ground support systems <i>Frozen earth wall, 1; Design considerations, 3</i>	1
1.2 Seasonally and perennially frozen ground <i>Cold regions: definition, 4; Subsurface temperatures, 4; Active layer, 7; Permafrost, 8</i>	4
1.3 Terrain features in permafrost areas <i>Ground ice features, 10; Patterned ground, 14</i>	10
1.4 Engineering considerations <i>Freezing process, 16; Thawing of frozen ground, 17; Frost action, 18; Useful aspects of frozen ground, 19; Ice as a construction material, 20; Problems</i>	16
	22
CHAPTER 2. PHYSICAL AND THERMAL PROPERTIES	23
2.1 Composition and structure of frozen ground <i>Soil types, 23; Phase relationships, 24; Ice phase, 27; Particle size and size distribution, 28; Consistency of cohesive soils, 30</i>	23
2.2 Soil classification <i>Unified soil classification system, 31; Frozen soil classification, 35</i>	31
2.3 Water–ice phase relationships <i>Unfrozen water in frozen soil, 40; Effect of solutes on freezing, 42</i>	40
2.4 Soil frost action <i>Frost action process, 43; Frost susceptibility of soils, 45; Frost-heave forces, 50; Freeze-thaw effects on permeability, 51</i>	43

2.5 Thermal properties <i>Thermal conductivity, 52; Heat capacity, 57; Thermal diffusivity, 59; Latent heat of fusion, 60; Thermal expansion (or contraction), 60 Problems</i>	52 62	CHAPTER 6. CONSTRUCTION GROUND FREEZING	151 151
<b>CHAPTER 3. HEAT FLOW IN SOILS</b>	<b>64</b>		
3.1 Heat transfer at the ground surface <i>Climatic factors, 64; Freezing (or thawing) indices, 66; Surface n-factor, 67</i>	64		
3.2 Seasonal ground freezing (or thawing) <i>Frost depth, 69; Thawing of frozen soil, 72; Design implications, 76</i>	69		
3.3 Temperature below cooled (or heated) areas <i>Steady state heat flow, 82; Transient temperatures, 90; Periodic heat flow, 90</i>	82		
3.4 Thermal analysis: frozen ground support systems <i>Single freeze pipe, 93; Wall formation, 97; Multiple rows of freeze pipes, 98 Problems</i>	93 98		
<b>CHAPTER 4. THAW BEHAVIOR OF FROZEN GROUND</b>	<b>102</b>		
4.1 Thaw settlement	102	7.1 General considerations <i>Foundations in seasonally frozen ground, 182; Foundations in permafrost, 183</i>	182 182
4.2 Consolidation of thawing soils <i>Thaw consolidation, 105; Residual stress in thawing soils, 108</i>	105	7.2 Shallow foundations <i>Selection of foundation method, 187; Design of shallow foundations, 190; Bearing capacity, 191; Settlement considerations, 195</i>	187
4.3 Thaw-consolidation in some layered systems <i>Two layer soil problems, 113; Compressible soil over discrete ice layers, 115 Problems</i>	113 119	7.3 Pile foundations <i>Pile types, 201; Pile placement, 201; Pile freezeback, 202; Axially loaded piles, 209; Laterally loaded piles, 219; Anchors in frozen ground, 220</i>	201 201
<b>CHAPTER 5. MECHANICAL PROPERTIES OF FROZEN SOILS</b>	<b>121</b>	7.4 Frost-heave forces on foundations <i>Tangential forces on a vertical surface, 222; Design for frost heave, 223 Problems</i>	222 223
5.1 Stress-strain-time and strength behavior <i>Hydrostatic pressure effect on frozen soil behavior, 121; Shear stress effect on frozen soil behavior, 122</i>	121	<b>CHAPTER 8. STABILITY OF SOIL MASSES IN COLD REGIONS</b>	225
5.2 Factors influencing creep and strength <i>Creep of frozen soil under constant stress, 123; Stress-strain behavior under constant strain rate, 125; Ice content effect on strength, 126; Normal pressure effect on strength, 127; Strain rate effect on strength, 128; Temperature effect on strength, 130; Frozen soil behavior at cryogenic temperatures, 132</i>	123	8.1 Landslides in permafrost: classification	225
5.3 Analytical representation of creep and strength data <i>General creep equation, 133; Strength of frozen soils, 137; Comparison with Vyalov's creep and strength equations, 139; Normal pressure effect on creep and strength, 139; Salinity effect on frozen soil creep and strength, 143</i>	132	8.2 Slopes in thawing permafrost <i>Low-angle planar flows, 227; Slides, 228</i>	227
5.4 Frozen soil behavior in uniaxial tension	144	8.3 Slopes in frozen soils	230
5.5 Deformability of frozen soils	146	8.4 Slope stabilization methods <i>Construction and design techniques, 232; Stabilization of planar slides, 232; Stabilization of cut slopes, 232 Problems</i>	231 236
5.6 Compressibility of frozen soils <i>Problems</i>	148 148	<b>CHAPTER 9. EARTHWORK IN COLD REGIONS</b>	237
		9.1 Site considerations <i>Drainage, 237; Thermal and frost action factors, 239; Subsurface conditions, 240; Material sources, 240</i>	237

9.2	Excavation and transport <i>Mechanical excavation, 243; Drilling and blasting, 248; Thawing frozen soil, 249; Hydraulic dredging, 254</i>	242
9.3	Field placement <i>Compaction, 255; Placement in water, 256</i>	254
9.4	Water-retaining embankments on permafrost <i>Unfrozen embankments, 258; Frozen embankments, 259; Maintaining the frozen state, 259; Thermal and stability considerations, 260</i>	257
9.5	Embankment performance <i>Frost heave, 261; Settlement, 262; Stability, 263; Artificial islands, 264</i>	261
<b>CHAPTER 10. FIELD INVESTIGATIONS</b>		<b>266</b>
10.1.	Sampling frozen ground <i>Sampling methods, 267; Sample protection, 268</i>	266
10.2	Ground-temperature measurement <i>Temperature sensors and measuring equipment, 270</i>	269
10.3	Field testing of frozen soils <i>Field test methods, 271; Pressuremeter test, 272; Deep static cone penetration test, 282; Other types of field tests, 284</i>	271
10.4	Geophysical methods <i>Seismic velocities in frozen ground, 287; Electrical properties of frozen ground, 288; Geophysical techniques used in frozen ground, 288; High-frequency electrical methods, 292; Borehole logging in permafrost, 294</i>	284
<b>APPENDIX A. SYMBOLS</b>		<b>298</b>
<b>APPENDIX B. SI UNITS</b>		<b>304</b>
<b>APPENDIX C. LABORATORY AND FIELD TESTS ON FROZEN SOILS</b>		<b>307</b>
C.1	Handling, storage, and machining of specimens prior to testing	307
C.2	Uniaxial compression test	310
C.3	Uniaxial tensile test	311
C.4	Salinity of soil pore water	313
C.5	Thermosiphon	316
C.6	Pile load test in permafrost	319
