| Acknowledgements | xiii |

Ecosystem Impacts:

| | |
|---|-----------|
| 1. Instream Flow Incremental Methodology (IFIM) for Modelling Fish Habitat | |
| <i>Navarro, McCauley & Blystra</i> | 1 |
| 1.1 Study sites | 3 |
| 1.2 Methods | 5 |
| 1.3 Results | 8 |
| 1.4 Discussion | 14 |
| 1.5 Management implications | 18 |
| 2. Development of Bioretention Practices for Storm-water Management | |
| <i>Coffman, Green, Clar & Bitter</i> | 23 |
| 2.1 Bioretention practices for graded areas | 24 |
| 2.2 Hydrology and hydraulics of bioretention areas | 28 |
| 2.3 Water quality | 35 |
| 2.4 Soil interaction | 37 |
| 2.5 Kettering case study | 38 |
| 2.6 Conclusions | 40 |
| 3. Ecologically Sensitive Channel Design for Urban Receivers: Case Studies | |
| <i>Scheckenberger & Portt</i> | 43 |
| 3.1 Preamble | 44 |
| 3.2 Introduction | 45 |
| 3.3 Impacts on aquatic ecosystems | 45 |
| 3.4 Case studies | 47 |
| 3.5 Conclusions | 63 |

Water Quality Modelling

| | |
|---|------------|
| 4. Predicting In-stream Water Quality from Watershed Characteristics | |
| <i>Huebner & Soutter</i> | 65 |
| 4.1 Introduction | 66 |
| 4.2 Methodology | 68 |
| 4.3 Results | 69 |
| 4.4 Conclusions | 72 |
| 5. BMP Planning Utilizing Knowledge Engineering Techniques | |
| <i>Goyen, Thompson and James</i> | 75 |
| 5.1 Proposed system | 76 |
| 5.2 System description | 76 |
| 5.3 Conclusions | 83 |
| 6. Environmental Concentrations of Urban Pesticides | |
| <i>Struger, Boyter, Licsko & Johnson</i> | 85 |
| 6.1 Introduction | 86 |
| 6.2 Pesticide questionnaire | 87 |
| 6.3 Field sampling | 90 |
| 6.4 Conclusions | 97 |
| 6.5 Recommendations | 97 |
| 7. Long Term Performance Modelling of Stormwater Quality Ponds | |
| <i>Guo & Adams</i> | 99 |
| 7.1 Introduction | 99 |
| 7.2 Principles of the statistical approach | 101 |
| 7.3 Statistical analysis of dry ponds | 103 |
| 7.4 Statistical analysis of wet ponds | 107 |
| 7.5 Results and Comparisons | 110 |
| 7.6 Conclusions | 116 |
| 8. Performance Analysis of Urban Runoff Quality Control Ponds by Continuous Simulation | |
| <i>Gordine & Adams</i> | 121 |
| 8.1 Introduction | 122 |
| 8.2 Continuous simulation models | 122 |
| 8.3 Facilities analyzed by simulation | 124 |
| 8.4 Retention basin (infiltration facility) | 125 |
| 8.5 Extended detention pond | 126 |

| | | |
|------------|---|------------|
| 8.6 | Sedimentation pond with displacement..... | 127 |
| 8.7 | Wet settling pond/tank..... | 128 |
| 8.8 | Conclusions..... | 138 |
| 9. | Characterization of Stormwater Runoff from Highways | |
| | <i>Thomson, McBean, Snodgrass & Mostrenko.....</i> | 141 |
| 9.1 | Introduction..... | 141 |
| 9.2 | Background..... | 142 |
| 9.3 | Runoff quality monitoring..... | 145 |
| 9.4 | Methodology..... | 146 |
| 9.5 | Minnesota data set..... | 147 |
| 9.6 | First flush..... | 150 |
| 9.7 | Surrogate water quality parameters..... | 151 |
| 9.8 | Summary..... | 155 |
| 10. | Stormwater Pollution Control at a Major Highway Interchange | |
| | <i>Parente & Hulley.....</i> | 159 |
| 10.1 | Methodology..... | 161 |
| 10.2 | Runoff pollutant source..... | 166 |
| 10.3 | Stormwater modelling..... | 167 |
| 10.4 | Results..... | 169 |
| 10.5 | Costing..... | 171 |
| 10.6 | Recommended drainage scheme..... | 171 |
| 11. | The Use of HSP-F in Subwatershed Planning | |
| | <i>Scheckenberger & Kennedy.....</i> | 175 |
| 11.1 | Introduction..... | 176 |
| 11.2 | The model..... | 177 |
| 11.3 | Continuous simulation vs. continuous analysis..... | 180 |
| 11.4 | Results..... | 185 |
| 11.5 | Conclusions..... | 186 |
| 11.6 | Discussion..... | 187 |
| 12. | Hydraulic and Pollutant Modeling of CSOs Using SWMM's EXTRAN Block | |
| | <i>O'Connor, Apicella, Schuepfer, Zaccagnino & Kloman.....</i> | 189 |
| 12.1 | Newton Creek planning project..... | 190 |
| 12.2 | SWMM and the pollutant post-processor..... | 190 |
| 12.3 | Calibration and verification..... | 194 |
| 12.4 | CSO projections and abatement modelling..... | 195 |
| 12.5 | Conclusions..... | 203 |

| | |
|---|------------|
| 13. Modelling Solar Thermal Enrichment of Urban Stormwater | |
| <i>Xie & James</i> | 205 |
| 13.1 Introduction..... | 205 |
| 13.2 Background review..... | 206 |
| 13.3 Recommended modelling procedures..... | 212 |
| 13.4 Discussion..... | 217 |
| 13.5 Conclusions..... | 217 |

New Methods and Modelling

| | |
|---|------------|
| 14. Integration of Probabilistic and Physically-Based Modelling with Optimization Methods for Stormwater Infrastructure Rehabilitation | |
| <i>Medina & Jacobs</i> | 221 |
| 14.1 Introduction..... | 222 |
| 14.2 Analysis of the rainfall time series..... | 223 |
| 14.3 Model development..... | 223 |
| 14.4 Explicit finite-difference solution for overland flow..... | 224 |
| 14.5 Kinematic channel flow..... | 226 |
| 14.6 Finite-difference linear scheme..... | 227 |
| 14.7 Optimization..... | 227 |
| 14.8 Application to study area..... | 229 |
| 14.9 Summary and conclusion..... | 239 |
| 15. Discharge Characterization of Urban Stormwater Runoff Using Continuous Simulation | |
| <i>Bumgardner, Ruby, Walker & Brent</i> | 243 |
| 15.1 Methodology..... | 244 |
| 15.2 Results..... | 251 |
| 15.3 Conclusions..... | 255 |
| 16. Weather Radar and Flood Forecasting | |
| <i>Kouwen & Soulis</i> | 257 |
| 16.1 Weather radar..... | 257 |
| 16.2 Hydrology..... | 262 |
| 16.3 Applying radar: case studies..... | 263 |
| 16.4 New directions..... | 266 |
| 16.5 Summary and conclusions..... | 268 |

Data Management

| | |
|---|------------|
| 17. A Time Adaptive Grid on the QUAL2E Water Quality Model | |
| <i>Jin & Hasson</i> | 271 |
| 17.1 Water quality model equations | 272 |
| 17.2 Dynamic adaptive grid generator | 273 |
| 17.3 Results of unsteady simulations | 276 |
| 17.4 Conclusions and discussion | 278 |
| 18. Real Time Flood Forecasting with GIS | |
| <i>Roberts & Anderson</i> | 281 |
| 18.1 Study background | 283 |
| 18.2 Study approach | 284 |
| 18.3 Tools and resources | 284 |
| 18.4 Validation | 288 |
| 18.5 Other applications | 288 |
| 18.6 Conclusions | 291 |
| 19. GIS Based Urban Drainage Modelling | |
| <i>Shamsi & Fletcher</i> | 293 |
| 19.1 Introduction | 293 |
| 19.2 The pilot project case study | 295 |
| 19.3 Hydraulic model: SWMM | 296 |
| 19.4 CSO Area GIS (CAGIS) | 300 |
| 19.5 Results and discussion | 302 |
| 19.6 Conclusions | 307 |

Current Practice

| | |
|--|------------|
| 20. Comparison of Two Methods of End-of-pipe Control for CSO and Stormwater | |
| <i>Conetta, Wichmann & Parente</i> | 309 |
| 20.1 Introduction | 310 |
| 20.2 Criteria | 312 |
| 20.3 Alternative control schemes | 312 |
| 20.4 Characteristics of storage tunnel & tanks | 313 |
| 20.5 Level of effectiveness | 316 |
| 20.6 Environmental impacts | 318 |
| 20.7 Capital cost | 320 |
| 20.8 Treatment flexibility | 320 |
| 20.9 Operation & maintenance requirements | 321 |
| 20.10 Conclusions | 322 |

| | |
|--|-----|
| 21. Modified Low Flow Frequency Analysis Applied to a Wastewater Allocation Study | |
| <i>Hulley, Dagg-Foster & Rowney</i> | 323 |
| 21.1 Hydrology | 324 |
| 21.2 Application of flow estimates to wastewater allocation | 333 |
| 22. Toward Cost Effective Planning and Management of Water Quality | |
| <i>Day</i> | 335 |
| 22.1 Remedial action plans in the Great Lakes | 337 |
| 22.2 Summary: regional example | 340 |
| 22.3 The Fox/Wolf River, Green Bay Watershed | 341 |
| 22.4 Improved approach to analysis and planning | 350 |
| 22.5 Conclusions and Recommendations | 353 |
| 23. Computerized Analysis of Rainfall Records to Determine Design Storm for CSO Abatement | |
| <i>Dillard, Kurz, Crane, & Maarfi</i> | 357 |
| 23.1 Background | 358 |
| 23.2 Design storm selection | 359 |
| 23.3 Future applications of methodology | 369 |
| 23.4 Summary | 371 |
| 24. A Methodology for Calibrating SWMM Models | |
| <i>Sangal & Bonema</i> | 375 |
| 24.1 Calibration process | 376 |
| 24.2 Good data..... | 377 |
| 24.3 Examples | 378 |
| 25. Guide to the 485 papers of the Kentucky Symposia, 1975-1985 | |
| <i>James</i> | 389 |
| 25.1 Introduction | 389 |
| Glossary | 413 |
| Acronyms | 433 |
| Programs and Models | 437 |
| Index | 439 |
| Index of authors cited | 469 |
