# Contents

1. DEVELOPMENT OF EMBANKMENT DAM ENGINEERING AND BASIC DESIGN CONSIDERATIONS	
1.1 Introduction: Historical Development	1
1.2 Future Prospects	3
1.3 Selection of Dam Site	4
1.4 Choice of Type of Dam	8
1.5 Classification of Embankment Dams	11
1.6 Criteria for Safe Design of Embankment Dams	13
1.7 Typical Sections	15
1.8 Layout of Dam and Appurtenances	16
1.9 Freeboard	17
1.10 Crest Width	20
1.11 Slope Protection	21
1.12 Protection of Upstream Slope	21
1.13 Protection of Downstream Slope	26
1.14 Development of Surface Water Resources in India	26
2. FOUNDATION EXPLORATION FOR EARTH AND ROCKFILL DAMS AND TREATMENT OF ROCK FOUNDATIONS	29
2.1 Foundation Investigations	29
2.2 Geophysical Methods of Subsurface Exploration	34
2.3 In-situ Measurements	40
2.4 Use of Rock Parameters to Decide Type of Dam	47
2.5 Laboratory Tests	48
2.6 Criteria for Acceptability of Foundation Rock Surface	48
2.7 Foundation Excavation: Jointed and Weak Foundations	50
2.8 Dams on Fault Zones	51
2.9 Core Contact Treatment	66
2.10 Drainage	69
2.11 Grouting	70
2.12 Dams on Karstic Foundations	84
3. SEEPAGE THEORY	88
3.1 Fundamentals of Seepage Flow	88
3.2 Permeability	91
3.3 Laplacian Equation and Flow Net	95

3.4	Determination of Free Surface and Discharge Through Dam	101
3.5	Anisotropic Seepage	110
3.6	Flow Net for Earth Dam Under Steady Seepage Condition	114
3.7	Top Flow Line in Slanting Cores	116
3.8	Methods Commonly Available for Drawing Flow Nets	118
3.9	Seepage Force and Its Effects	121
4.	CONTROL OF SEEPAGE THROUGH EMBANKMENT DAMS	132
4.1	Adverse Effect of Seepage	132
4.2	Methods of Seepage Control	133
4.3	Core	133
4.4	Drainage of Embankments	155
4.5	Design of Transition Filter	161
4.6	Use of Geotextiles as Filter Material	170
5.	TREATMENT OF FOUNDATIONS FOR EMBANKMENT DAMS	177
5.1	Rock Foundations	177
5.2	Alluvial Foundations	177
5.3	Pervious Foundations	177
5.4	Seepage Curtailment	178
5.5	Upstream Impervious Blanket	195
5.6	Foundations of Clayey Soils	203
5.7	Downstream Drainage of Foundations	207
5.8	Problem of Impervious Layer Overlying Pervious Stratum	217
5.9	Treatment of Sandy Deposits Susceptible to Liquefaction	219
6.	CRACKING OF EARTH DAMS	223
6.1	Introduction—Hydraulic Fracturing	223
6.2	Some Instructive Case Studies	224
6.3	Causes of Cracking	228
6.4	Laboratory Studies on Cracking Potential	237
6.5	Influence of Soil Type	237
6.6	Finite Element Analysis	239
6.7	Hydraulic Fracturing	241
6.8	Preventive and Remedial Measures	249
6.9	Dispersive Soils	249
7.	SHEAR STRENGTH OF SOILS	254
7.1	Introduction	254
7.2	Stresses on a Plane	254
7.3	Nature of Shear Strength of Soils	256
7.4	Mohr Strength Theory	258
7.5	Shear Testing of Soils	260
7.6	Shear Characteristics of Non-cohesive Soils	263

7.7	Shearing Strength of Rockfill Material	271
7.8	Shear Strength of Cohesive Soils	276
7.9	Shearing Strength of Compacted Clays	281
7.10	Dynamic Strength of Cohesive Soils	284
8.	CRITICAL STAGES AND PORE PRESSURES IN EARTH DAMS	287
8.1	Critical Stages	287
8.2	End of Construction Condition	288
8.3	Steady Seepage Pore Pressures	308
8.4	Rapid Drawdown Condition	310
9.	STABILITY ANALYSIS—THE LIMIT-EQUILIBRIUM APPROACH	328
9.1	Introduction	328
9.2	Effective and Total Stress Approach	329
9.3	Shape of the Slip Surface	330
9.4	Method of Slices	330
9.5	Graphic Methods	342
9.6	Location of the Critical Circle	346
9.7	Wedge Analysis	346
10.	FINITE-ELEMENT METHOD OF STABILITY ANALYSIS	362
10.1	Introduction	362
10.2	The Method	363
10.3	Material Non-linearity	367
10.4	Constitutive Laws	372
10.5	Analysis of Dams by Finite-Element Method	374
10.6	Three-dimensional Analysis	384
11.	STABILITY DURING EARTHQUAKES	394
11.1	Introduction	394
11.2	Recorded Damages and Failures	394
11.3	Types of Damage or Failure	398
11.4	Earthquakes	398
11.5	Response Analysis of Embankment Dams	407
11.6	Finite-Element Approach	419
11.7	Development of Deformation Analysis	421
11.8	Summary and Design Recommendation	429
11.9	Indian Standard for Earthquake-Resistant Design	431
11.10	Other Precautions	432
12.	ROCKFILL DAMS	439
12.1	Introduction	439
12.2	General Characteristics of Rockfill Dams	444
12.3	Material for Rockfill Dams	447
12.4	Testing of Rockfill Material	448

12.5	Foundations of Rockfill Dams	451
12.6	Design of Dam Section	452
12.7	Membrane or Facing	456
12.8	Rubble Cushion or Zone of Selected, Compacted Material Behind the Membrane	461
12.9	Rockfill Placement	462
12.10	Examples of Modern Concrete-faced Rockfill Dams	463
12.11	Deformation of Rockfill Dams	469
12.12	Flow Through and Over Rockfill Dams	477
12.13	Underwater Placement	478
13.	QUALITY CONTROL IN CONSTRUCTION OF EMBANK- MENTS—MONITORING OF POST-CONSTRUCTION BEHAVIOUR	482
	PART I: QUALITY CONTROL	
13.1	General	482
13.2	Borrow Area Control	483
13.3	Compaction of Cohesive Soils	485
13.4	Mechanics of Compaction of Soils	489
13.5	Influence of Method of Compaction	489
13.6	Mechanics of Compaction of Cohesionless Soils	491
13.7	Compaction in the Field: Cohesive Soils	491
13.8	Compaction of Non-cohesive Soils	495
13.9	Control of Compaction	497
13.10	Placement Control in the Field	498
13.11	Compaction Control of Core Materials Containing Gravels	502
13.12	Frequency of Testing	503
13.13	Specifications and Statistical Control of Density and Moisture Content	504
13.14	Treatment of Contact Services	506
	PART II: INSTRUMENTATION	
13.15	Purpose and Types of Instruments	509
13.16	Piezometers	510
13.17	Installation	516
13.18	Measurement of Horizontal Embankment Movement	519
13.19	Foundation Settlement	521
13.20	Vertical Embankment Compression	521
13.21	Surface Monuments	526
13.22	Strain Meters	527
13.23	Stress Meters	528
13.24	Earthquake Recorders	529
13.25	Observation and Measurement of Leakage	529
13.26	Planning for Instrument Installation	531

14. SOME IMPORTANT EMBANKMENT DAMS	523
14.1 Chicoasen Dam (Mexico)	533
14.2 Oroville Dam (USA)	536
14.3 Tehri Dam (India)	539
14.4 Nurek Dam (Russia)	542
14.5 Mica Dam (Canada)	545
14.6 High Aswan Dam (Egypt)	548
15. CASE STUDIES OF DAM FAILURES	552
15.1 Failure of Teton Dam (USA)	552
15.2 Failure of Panshet Dam (India)	558
15.3 Failure of Nanak Sagar Dam (India)	563
15.4 Waco Dam Slide (USA)	566
15.5 Drawdown Slope Failure of Sampna Dam (India)	569
15.6 Overtopping Failure of Machhu Dam II (India)	571
16. RIVER DIVERSION DURING CONTRUCTION	576
16.1 General	576
16.2 Diversion Stage	577
16.3 Diversion Capacity	579
16.4 Diversion Methods	580
16.5 Diversion Through or Over Permanent Works	588
16.6 River Closure for Diversion	591
16.7 Coffor Dams	594
16.8 Final Closure of Diversion Works	603
17. SPILLWAYS FOR EMBANKMENT DAMS	606
17.1 General: Factors Affecting Design	606
17.2 Components of Spillways	607
17.3 Types of Spillways	607
17.4 Design Principles of Ogee or Overflow Spillway	614
17.5 Side-Channel Spillway	625
17.6 Chute Spillway	625
17.7 Shaft Spillway	629
17.8 Tunnel Spillway	640
17.9 Use of Hydraulic Models in Design of Spillway and Energy Dissipators	652
17.10 Dam Heightening and Spillways	655
18. ENERGY DISSIPATORS	657
18.1 General-Energy Dissipators	657
18.2 Design Criteria of Various Energy Dissipators	660
19. ENVIRONMENTAL IMPACT OF DAMS	683
APPENDIX	696
