New York • Albany • Bonn • Boston • Cincinnati • Detroit • Madrid • Melbourne
Mexico City • Pacific Grove • Paris • San Francisco • Singapore • Tokyo • Toronto • Washington

Contents

<i>Preface</i>	xiii
Chapter 1 An Introduction to Tunnel Engineering	1
<i>Elwyn H. King and Thomas R. Kuesel</i>	
Tunnel elements	1
Details	2
Chapter 2 Tunnel Layout	4
<i>Elwyn H. King and Thomas R. Kuesel</i>	
Clearances for highway tunnels	4
Alignment and grades for highway tunnels	4
Clearances for railroad tunnels	5
Alignment and grades for railroad tunnels	5
Clearances for rapid transit tunnels	6
Alignment and grades for rapid transit tunnels	6
Controls on layout of underwater transportation tunnels	8
Chapter 3 Tunnel Surveys and Alignment Control	13
<i>William S. Robinson</i>	
Current state of surveying technology	13
General surveying requirements and procedures	16
Tunnel geometry	23
Survey work during construction	25
Survey for construction of immersed tubes	34
Tunnel monitoring surveys	36
Representative projects	40
Chapter 4 Geotechnical Investigations	46
<i>Harvey W. Parker</i>	
Geotechnical approach to tunnel design	46
Geotechnical challenges of the underground	47
Importance of geology	48
Phasing and timing	48
Teamwork, communications, and training	50
Soil classification for tunnels	51
Rock classification	54
Description of investigation techniques	59
Developing the investigation program	65
Tunnel monitoring and instrumentation	69
Guidelines for level of geotechnical effort	69
Geotechnical Reports	74
Chapter 5 Tunnel Stabilization and Lining	80
<i>Thomas R. Kuesel</i>	
Classifications	80
Principles of ground-structure interaction	84
Design considerations	86
Lining behavior under ground loads	87
Performance criteria for flexible ring design	87
Behavior of two-stage linings	89
Lining analysis	90
Behavior of rock reinforcement systems	91

Tandem linings	94
Relation of design and analysis	95
Principles of tunnel stabilization and lining design	95
Chapter 6 Soft Ground Tunneling	97
<i>James E. Monsees</i>	
Geotechnical investigations	97
Anticipated ground behavior	97
Soil stabilization and groundwater control	98
Grouting	101
Soft ground tunneling machines	107
Selection of soft ground tunneling machine	108
Soft ground tunnel support and lining	111
Surface effects of tunnel construction	111
Building protection methods	115
Practicalities of tunnel engineering	116
Seismic design of soft ground tunnels	118
Chapter 7 Rock Tunnels	122
<i>Elwyn H. King</i>	
Classical concept	122
Changing concepts	125
Rock discontinuities	126
Rock movement	127
Water	128
Formation grouting	129
Rock reinforcement	130
Current concepts	131
Rock mass rating (rmr)	134
Excavation methods	139
Effect of excavation method on design	141
Seismic effects	142
Use of explosives	143
Cast-in-place linings	145
Caverns	148
Leakage	151
Chapter 8 Tunneling in Difficult Ground	153
<i>Terrence G. McCusker</i>	
Instability	153
Heavy loading	164
Drill-and-blast tunneling	166
TBM tunneling	168
Swelling	172
Obstacles and constraints	172
Physical conditions	174
Observations	175
Chapter 9 Shafts	177
<i>Robert J. Jenny</i>	
Shaft excavation in soft ground	177
Excavation in soft, wet ground	181
Shaft excavation in rock	184
Lining of shafts	185
Chapter 10 Deep Shafts	187
<i>Maurice Grieves</i>	
Shafts for tunnels and caverns	187
Alternatives to conventional drill-and-blast methods	188
Construction sequence	188
Conventional sinking equipment	191
The shaft sinking cycle	193

Shaft equipping	196
Ground stabilization	198
Blast design and the use of explosives	201
Raise drilling, blind drilling, and other alternatives	202
Chapter 11 Tunnel Boring Machines	203
<i>Harry Sutcliffe</i>	
Historical development	203
Excavation under external water pressure	205
Components of a modern TBM	205
Operation of the TBM	207
The TBM, temporary support, and permanent lining	209
The decision to use a TBM	209
Selecting a soft ground TBM	210
Measuring TBM performance	210
The learning curve	212
Variability in ground	213
Noncircular tunnels	214
Chapter 12 Shotcrete	220
<i>Elwyn H. King</i>	
History	220
Quality assurance	223
Materials	223
Engineering properties	225
Wet or dry?	226
Preparation, mix, shoot, and cure	227
Testing	228
Design considerations	229
Chapter 13 Materials Handling and Construction Plant	231
<i>A. A. Mathews</i>	
Basic transportation systems	231
Special muck transporting systems	239
Supplemental material handling systems	244
Vertical transport	248
Hoisting	252
Vertical conveyors	254
Utilities	255
Surface plant	262
Concrete plant	264
Shotcrete plant	266
Chapter 14 Immersed Tube Tunnels	268
<i>Ahmet Gursoy</i>	
General description	268
Conceptual considerations	269
Steel shell tubes	273
Concrete tubes	279
Weight control of tubes	280
Preparation of trench	281
Tube foundations	282
Joints between tubes	285
Backfill	289
Design of tubes	289
Chapter 15 Water Conveyance Tunnels	298
<i>David E. Westfall</i>	
Friction losses	298
Drop shafts for vertical conveyance	298
Air removal	302
Gas buildups in sewer tunnels	304

Control of infiltration and exfiltration	304
Lake taps and connections to live tunnels	308
Tunnel maintenance	309
Chapter 16 Small-Diameter Tunnels	311
<i>David E. Westfall and Glenn M. Boyce</i>	
Basic procedure	311
Site investigations	313
Pits and shafts	313
Leading edge	314
Jacking pipes	316
Applications	318
Chapter 17 Cut-and-Cover Tunnel Structures	320
<i>James L. Wilton</i>	
Tunnel design—structural	322
Shoring systems	329
Common types of shoring walls	329
Common types of shoring wall support	332
Design of shoring systems	335
Performance of shoring systems	346
Decking	348
Excavation and groundwater control	349
Permanent shoring walls and support	352
Reinforced concrete materials and construction	353
Watertightness	357
Chapter 18 Safety Provisions	360
<i>Robert J. Jenny</i>	
General safety rules	360
Localized operational hazards	361
First aid station	362
Fire hazards	363
Ventilation during construction	363
Handling and storage of explosives	364
Inactive headings	364
Compressed-air work	364
Decompression table explanation	367
Chapter 19 Fire Life Safety	369
<i>Norman H. Danziger</i>	
Background	369
BART	369
Highway tunnels	372
Rapid transit tunnels	378
Mainline railroad tunnels	381
Fire suppression systems	382
Sprinkler systems	382
Chapter 20 Tunnel Ventilation	384
<i>Arthur G. Bendelius</i>	
Highway tunnels	384
Railroad tunnels	406
Rapid transit systems	414
Simulation	421
Test program	422
Equipment and facilities	424
Control and monitoring systems	435
Ventilation during construction	436

Chapter 21 Tunnel Lighting	439
<i>Peter A. Mowczan</i>	
Lighting of highway tunnels	439
Definition of terms	439
Tunnel lighting nomenclature	440
Tunnel classification	441
Physiological considerations in tunnel lighting design	441
Entrance lighting	443
Luminance level in the tunnel interior	444
Exit lighting	445
Lighting of short tunnels	445
Lighting of long tunnels	446
Tunnel lining	451
Tunnel lighting luminaires	451
Maintenance	452
Emergency lighting	453
Lighting of transit tunnels	453
Lighting of railway tunnels	453
Design computations	454
Chapter 22 Power Supply and Distribution	455
<i>Eliel Elrove</i>	
Peculiar electrical requirements of tunnels	455
Types of tunnels	456
Electrical loads	456
Lighting load	456
Power load	457
Tunnel ventilation fan load	457
Miscellaneous loads	457
Voltage selection	457
Distribution voltage	458
Primary distribution systems	458
Service bus arrangements	459
Secondary distribution system	460
Standby power supply	460
Uninterruptible power systems (UPS)	461
Standby power distribution system	461
Supervisory control and data acquisition (SCADA)	461
Data transmission system (DTS)	462
Auxiliary systems	462
Grounding and bonding	462
System grounding	462
Equipment grounding	462
Grounding electrodes	463
Stray current and cathodic protection	463
Raceway systems	463
Design	463
Materials	463
Major equipment	464
Chapter 23 Water Supply and Drainage Systems	467
<i>Arthur G. Bendelius</i>	
Water supply system	467
Water supply design criteria	467
Water source	467
Water mains	468
Hose stations	470
Protection of exhaust fans	470
Fire pumps	471
Drainage system	473
Drainage design criteria	474

Open approach drainage	475
Tunnel drainage	476
Drainage pump stations	476
Drainage pumps	477
Water treatment	480
Flood protection	481
Drainage of rail tunnels	482
Chapter 24 Surveillance and Control Systems for Highway Tunnels	485
<i>Richard J. Naish</i>	
Surveillance and control systems	485
Overview of available technology	485
Traffic control concepts	487
Field hardware	490
Control center	493
System selection	496
Design and implementation	496
Operation and maintenance	497
Chapter 25 Tunnel Finish	499
<i>Stanley Lorch</i>	
Suspended ceiling systems	500
Ceiling veneers	504
Tunnel sidewall finishes	505
Sidewalks	506
Equipment niches and doors	508
Roadway design	508
Tunnel finish materials	508
Chapter 26 Service Buildings and Ancillary Spaces	512
<i>Stanley Lorch and Hanan Kivett</i>	
Ventilation buildings for ducted tunnels	512
Program requirements	514
Underground rail transit stations	517
Chapter 27 Tunnel Rehabilitation	520
<i>Henry A. Russell</i>	
Tunnel rehabilitation inspection methods	520
Tunnel rehabilitation repairs	528
Concrete repair	528
Crack repair	534
Metal repairs	536
Brick masonry repair	537
Segmental tunnel liners	537
Construction costs	538
Chapter 28 Tunnel Construction Contracting	541
<i>Thomas R. Kuesel</i>	
Differing site conditions clause	542
