

Sedimentation problems in river basins

Project 5.3 of the
International Hydrological
Programme

Report prepared under the
Chairmanship of A. Sundborg
Edited by W. R. White

Contents

Foreword	10
Introduction	11
PART 1 INFLUENCE OF MAN'S ACTIVITIES ON SEDIMENTATION PROCESSES	13
1.1 Interfluvial Areas	13
1.1.1 Introduction	13
1.1.2 Rural Environment	15
1.1.2.1 Land Use and Planning	15
1.1.2.2 Agricultural Practices	15
1.1.2.3 Forestry	16
1.1.2.4 Grazing	16
1.1.3 Urban and Industrial Environment	20
1.1.3.1 Mining	20
1.1.3.2 Road and Building Construction	20
1.1.3.3 Urban Development	21
1.1.4 Sedimentation Processes and Ecological Changes	22
1.1.5 Arid and Semi-arid Environment	25
1.2 Watercourses	26
1.2.1 Introduction	26
1.2.2 Changes in Flow Regime and Sediment Input	26
1.2.3 Engineering Structures	29
1.2.3.1 Local effects	29
1.2.3.2 Overall Effects	30
PART 2 EROSION AND SEDIMENTATION PROCESSES	33
2.1 General Concepts	33
2.1.1 Types of Erosion and Deposition	33
2.1.2 Catchment Characteristics	34
2.2 Interfluvial Areas	34
2.2.1 Weathering Processes	34
2.2.2 Climatological Influences	37
2.2.3 Topographical Factors	37
2.2.4 Geological and Soil Factors	38
2.2.5 Vegetative Cover	38
2.2.6 Land Use	38
2.3 Water Courses	39
2.3.1 Sediment Movement	39
2.3.1.1 Sediment Characteristics	39
2.3.1.2 Fall Velocity	41
2.3.1.3 Threshold of Movement	41

2.3.1.4	Bedload	42
2.3.1.5	Suspended Bed Material Load	42
2.3.1.6	Fine Material Load	42
2.3.1.7	Bed Features	45
2.3.1.8	Armouring of the Bed	45
2.3.2	Channel Characteristics	45
2.3.2.1	The Geometry of Stable Channels	45
2.3.2.2	Factors Affecting Channel Geometry	46
2.3.3	Deposition and Erosion	47
PART 3	THE PREDICTION OF THE EFFECTS OF MAN'S ACTIVITIES	51
3.1	Acquisition of Data	51
3.1.1	Reconnaissance	51
3.1.1.1	Review of Existing Data	51
3.1.1.2	Ground Inspection	53
3.1.1.3	Aerial Photography	53
3.1.1.4	Remote Sensing	53
3.1.2	Field Investigations	53
3.1.2.1	Investigation of Erosion Processes on Small Watersheds and Runoff Plots	53
3.1.2.2	Investigation of Sediment Transport in Rivers	59
3.1.2.3	Investigations of Sediments in Ponds and Reservoirs	66
3.2	Analysis of Data	68
3.2.1	Evaluation of Accuracy and Reliability of Data	68
3.2.2	Methods for Analysis	71
3.2.2.1	Analysis of Sediment Data	71
3.2.2.2	Fluvial Morphology	72
3.2.2.3	Reservoir Resurvey Data	72
3.3	Prediction Methods	77
3.3.1	Empirical Methods	77
3.3.1.1	Sediment Yields from Water Course Data	77
3.3.1.2	Sediment Yields from Interfluvial Data	78
3.3.1.3	Field Experiments	78
3.3.2	Calculation Methods	82
3.3.2.1	Water Courses	85
3.3.3	Modelling Methods	87
3.3.3.1	Mathematical Modelling as Applied to Interfluvial Areas	87
3.3.3.2	Mathematical Modelling of Water Courses	89
3.3.3.3	Scale Modelling	92
PART 4	METHODS TO CONTROL EROSION AND SEDIMENTATION	99
4.1	River Basins	99
4.1.1	Introduction	99
4.1.2	Agrotechnical Measures	99
4.1.3	Forest Reclamation	100
4.1.4	Hydrotechnical Measures	100
4.1.5	General Conclusions	103
4.2	Water Courses	103
PART 5	CASE STUDIES	109
5.1	Sediment Study of Wet Tropical Area in Puerto Rico	109
5.1.1	Introduction	109
5.1.2	Sediment Data	109
5.1.3	Sediment Rating Curve Method	109
5.1.4	Reservoir Survey Method	112
5.1.4.1	Guayabal Reservoir Survey	114
5.1.5	Conclusion	114
5.2	Soil Erosion, Sediment Transport and Sedimentation Problems Related to the Creation of a Medium Sized Man-Made Lake in a Semi-Arid Area	117

5.2.1	Introduction	117
5.2.2	Study Programme	117
5.2.3	Land Systems Mapping	118
5.2.4	Geomorphological Mapping of the Reservoir Area	118
5.2.5	Rainfall, Vegetation and Soil Erosion	118
5.2.6	Evaluation of Present Soil Erosion Processes	120
5.2.7	Sediment Transport and Probable Future Sedimentation in the Reservoir	121
5.2.8	Main Conclusions from the Sedimentation Studies	121
5.3	The Use of a Mathematical Model to Simulate Long-Term Changes in Bed Levels in Estuaries	121
5.3.1	Introduction	121
5.3.2	Great Ouse Estuary	121
5.3.3	The Model	122
5.3.4	Results	122
5.4	The Use of a Scale Model to Study Engineering Problems Associated with the Construction of a Large Dam	126
5.4.1	Introduction	126
5.4.2	Description of the Model	126
5.4.3	Protection of Cofferdams during Construction	126
5.4.4	River Diversion	129
5.4.5	Spillway	129
5.5	Quantification of Soil Erosion or Sediment Transport Caused by Isolated Storms in a Semi-Arid Region	129
5.5.1	Available Data	130
5.5.2	Results	130
5.5.3	Conclusions	133
PART 6	BIBLIOGRAPHY	135
PART 7	APPENDICES	137
7.1	Calculation Techniques for Interfluvial Areas	137
7.1.1	Objective	137
7.1.2	Predicting Sheet and Rill Erosion	137
7.1.3	Solution	142
7.2	List of Terms and Definitions	143
