Contents

CHAPTER 1	Introduction	1
1.1	References	4
CHAPTER 2	The Governing Equations for Multiphase Flow in a Deforming Porous Medium	6
2.1	Introduction	6
2.2	Solid-phase Behaviour	6
2.3	Fluid Phase Behaviour in a Deforming Porous Medium	8
2.4	The Fluid Pressure in a Multiphase Flow Regime	13
2.5	Flow Equation for a Single Phase in a Deforming Porous Medium	16
2.6	Saturated–Unsaturated Flow in Porous Media	17
2.7	Summary	19
2.8	References	19
CHAPTER 3	Solution Procedures	21
3.1	Introduction	21
3.2	Uncoupled Solutions	21
3.3	Coupled Solution—Saturated One-phase Flow in a Deforming Porous Medium	24
3.4	Boundary Value Solution	24
3.5	Application of the Finite Element Method	25
3.6	Discretization in Time	28
3.7	Oscillation and Stability	30
3.8	A Coupled Solution for the Settlements in Hydrocarbon Reservoirs	31
3.9	The Numerical Solution of Saturated–Unsaturated Flow in Porous Media	35
3.10	Summary	37
3.11	References	37

CHAPTER 4 Constitutive Relationships and Variable

Permeabilities	39
4.1 Introduction	39
4.2 Stress Invariants	40
4.3 Linear Elastic Analysis	42
4.4 Variable Elastic Analysis	44
4.4.1 Bilinear Models	44
4.4.2 Variable Elastic Model	46
4.4.2.1 Hyperbolic Model	46
4.4.2.2 $E-v$ and $K-G$ Variable Elastic Model	47
4.4.2.3 Spline Functions	47
4.4.3 Solution Procedures	48
4.5 Elastoplastic Models	50
4.5.1 Constitutive Law	50
4.5.2 Solution Procedures	52
4.5.3 Mohr–Coulomb Yield Surface	53
4.5.4 Critical State Model	56
4.5.4.1 Modified Cam Clay Model	57
4.5.4.2 $p-q-\theta$ Critical State Model	60
4.5.5 Corners of Yield and Potential Surfaces	63
4.6 Variation of Permeability	63
4.7 Conclusions	66
4.8 References	66

CHAPTER 5 Validation of Elastic and Elastoplastic Consolidation Programs

5.1 Introduction	69
5.2 Elastic Solutions for Drained and Undrained Conditions	69
(a) Fully Drained, Steady-State Conditions	71
(b) Instantaneous Load (Undrained Conditions)	71
5.2.1 Plane Strain, Uniform Loading	74
5.2.2 Radially Symmetric, Uniform Loading	74
5.3 Elastic Analysis of Consolidation Under Strip and Circular Uniform Loading	79
5.4 Elastoplastic Solutions	80
5.4.1 Undrained Triaxial Test on Normally Consolidated Soil	80
(a) Mohr–Coulomb Analysis	80
(b) Critical State Ellipse Analysis	81
5.4.2 Drained and Undrained Analyses of Strip Loading	83
(a) Mohr–Coulomb Analysis	83
(b) Critical State Ellipse Analysis	85

	(c) Analysis by Means of a Critical State Ellipse with Mohr-Coulomb Cutoff ($c=0$)	85
5.5	Elastoplastic Analysis of Consolidation Under Uniform Loading and Strip Loading	86
	5.5.1 One-Dimensional Consolidation	86
	5.5.2 Two-Dimensional Consolidation	89
5.6	Linear and Non-Linear Elastic Consolidation with Variable Permeability	90
	5.6.1 Consolidation of Swansea Blue Clay in a Rowe Consolidation Cell	91
	5.6.2 Consolidation of Kaolin in a Rowe Consolidation Cell	93
5.7	Summary	96
5.8	References	96
CHAPTER 6	Modelling of Subsidence	98
6.1	Introduction	98
6.2	The Subsidence of Venice	100
	6.2.1 Background	100
	6.2.2 The Mathematical Model	104
	6.2.3 Results	110
6.3	Subsidence in the PO Delta and the Polesine	116
	6.3.1 Background	116
	6.3.2 The Bosaro Model	119
	6.3.2.1 Available Data and Modelling	119
	6.3.2.2 Results and Comparison with Field Observations	121
	6.3.3 The Contarina Model	127
	6.3.3.1 Available Data	127
	6.3.3.2 Parametric Investigations	131
	6.3.3.3 Subsidence Rebound	141
6.4	Subsidence Above Gas Reservoirs—the Ravenna Case	144
	6.4.1 Background	144
	6.4.2 Results	147
	6.4.3 Comparison Between a Volumetric and a Waterdrive Gas Reservoir	156
6.5	Conclusions	160
6.6	References	162
CHAPTER 7	Heat and Fluid Flow in Deforming Porous Media	165
7.1	Introduction	165
7.2	Governing Equations	167
	7.2.1 Non-isothermal Solid-phase Behaviour	167

7.2.2	Flow Equation for a Single Phase in a Deforming Non-isothermal Porous Medium	168
7.2.3	Energy Transport Through a Deforming Porous Medium	170
7.2.4	Finite Element Discretization of the Governing Equations in Space	171
7.3	Solution Procedures	175
7.3.1	Monolithic Augmentation Approach	175
7.3.2	The Partitioned Solution Procedure	176
7.3.2.1	Stability Analysis	177
7.4	Non-isothermal Elastoplastic Models and Temperature- and Pressure-dependent Parameters	179
7.4.1	Constitutive Law	179
7.4.2	Temperature- and Pressure-dependent Parameters	181
7.5	Examples	182
7.5.1	Thermo-elastic Consolidation	183
7.5.2	Thermo-elastoplastic Consolidation	187
7.5.3	Thermo-elastic Consolidation Around a Cylindrical Heat Source	189
7.6	Conclusions.	191
7.7	References	191
CHAPTER 8	Secondary Consolidation—Creep in Soils	194
8.1	Introduction	194
8.2	Formulation of Secondary Consolidation	195
8.3	Application of the Creep Model.	197
8.3.1	Background.	197
8.3.2	Mathematical Modelling	200
8.3.3	Results	202
8.4	References	206
CHAPTER 9	Two-dimensional, Non-linear Thermo-elastoplastic Consolidation Program Plascon (With C. E. Majorana)	207
9.1	Introduction	207
9.2	Particular Features of Plascon	208
9.3	Explanation of the Routines and Variables	209
9.3.1	Definition of the Variables Contained in the Common Blocks	211
9.3.2	Definition of the Vectors and Matrices Used in the Program	218
9.3.3	Semi-dynamic Dimensioning	222
9.4	Program Listing	230

9.5 Linear Elastic Isothermal Version	304
9.6 Conclusions	305
9.7 References	305
APPENDIX 1 Conversion From Global to Local Coordinate System.	307
APPENDIX 2 User's Manual	309
Author Index	334
Subject Index	337
