

# Fundamentals of Rock Mechanics

J. C. Jaeger

*Emeritus Professor of Geophysics in the  
Australian National University*

N. G. W. Cook

*Professor of Mining Engineering  
University of California*

THIRD EDITION

LONDON

CHAPMAN AND HALL

# Contents

Foreword	page xiii
Preface to the First Edition	xv
Preface to the Second Edition	xvii
Preface to the Third Edition	xix
Notation	xxi
<b>1. Rock as a material</b>	<b>1</b>
1.1 Introduction	1
1.2 Joints and faults	2
1.3 Rock-forming minerals	5
1.4 The fabric of rocks	6
1.5 The mechanical nature of rock	7
<b>2. Analysis of stress and infinitesimal strain</b>	<b>9</b>
2.1 Introduction	9
2.2 Definition of stress	9
2.3 Stress in two dimensions	11
2.4 Stress in three dimensions	17
2.5 Stress calculations in three dimensions	24
2.6 Mohr's representation of stress in three dimensions	27
2.7 The use of the stereographic projection	30
2.8 Stress deviation	32
2.9 Displacement and strain	33
2.10 Infinitesimal strain in two dimensions	37
2.11 Infinitesimal strain in three dimensions	41
2.12 Strain deviation	44
2.13 Determination of principal stresses or strains from measurements	45
2.14 Matrices and change of axes	47
2.15 Stress and strain in polar and cylindrical coordinates	50
<b>3. Friction</b>	<b>53</b>
3.1 Introduction	53
3.2 Amonton's law	53
3.3 Friction of rocks	57
3.4 Phenomena with smooth surfaces	61
3.5 Stick-slip oscillations	63
3.6 Sliding on a plane of weakness: two-dimensional theory	65
3.7 The study of friction in triaxial apparatus	68
3.8 Sliding on a plane of weakness: three-dimensional theory	70
3.9 The effects of time and relative displacement on rock friction	73

<b>4. Elasticity and strength of rock</b>	<b>77</b>
4.1 Introduction	77
4.2 The stress-strain curve	78
4.3 The effects of confining pressure and temperature	86
4.4 Failure under polyaxial stresses	88
4.5 Types of fracture	91
4.6 The Coulomb criterion	95
4.7 Mohr's hypothesis	99
4.8 The plane Griffith criterion	101
4.9 Murrell's extension of the Griffith criterion	103
4.10 The effect of anisotropy on strength	106
<b>5. Linear elasticity</b>	<b>109</b>
5.1 Introduction	109
5.2 The stress-strain relations for an isotropic linearly elastic solid	109
5.3 Special cases	113
5.4 Stress-strain relations in terms of stress and strain deviations	116
5.5 The equations of equilibrium	116
5.6 The equations of equilibrium in cylindrical coordinates	120
5.7 Compatibility conditions for stress and the Airy stress function	122
5.8 Strain energy	123
5.9 Torsion of circular cylinders	127
5.10 Bending and buckling	129
5.11 Hollow cylinders with internal or external pressure	134
5.12 Stress-strain relations for anisotropic materials	137
<b>6. Laboratory testing</b>	<b>143</b>
6.1 Introduction	143
6.2 Uniaxial compression	144
6.3 Uniaxial tension	147
6.4 Triaxial compression	147
6.5 Extension in the triaxial test	150
6.6 Results of triaxial tests	151
6.7 Tests with homogeneous polyaxial stress	158
6.8 Hollow cylinders	160
6.9 Torsion	166
6.10 Bending	167
6.11 Diametral compression of cylinders	169
6.12 Other tests	173
6.13 Stiff and servo-controlled testing machines	177
6.14 Dynamic methods	183
6.15 Comparison of results	189
<b>7. Effects of size and stress gradient</b>	<b>195</b>
7.1 Introduction	195
7.2 The influence of size on strength	196
7.3 The influence of stress gradient on strength	197
7.4 Weibull's discussion of tensile strength	199
7.5 Bending	201

7.6	Hollow cylinders	203
7.7	Biaxial stresses and torsion	204
<b>8.</b>	<b>Fluid pressure and flow in rocks</b>	<b>208</b>
8.1	Introduction	208
8.2	Porosity and permeability	209
8.3	Flow of fluid through a porous medium	210
8.4	The macroscopic stress-strain relations	211
8.5	The equations of equilibrium, flow, and consolidation	214
8.6	Consolidation and water movement in one dimension	215
8.7	Simplified equations of consolidation	217
8.8	Effective stress	219
8.9	The effect of pore-pressure on the strength of rocks	223
8.10	Hydraulic fracturing	226
<b>9.</b>	<b>Behaviour of ductile materials</b>	<b>228</b>
9.1	Introduction	228
9.2	Yield criteria	229
9.3	The equations of plasticity	232
9.4	Elastic-plastic solutions in cylindrical coordinates	235
9.5	Flow between flat surfaces	237
<b>10.</b>	<b>Further problems in elasticity</b>	<b>241</b>
10.1	Introduction	241
10.2	Complex variable theory in two dimensions	241
10.3	Simple special cases	246
10.4	The region outside a circular hole of radius $R$ with given principal stresses at infinity	249
10.5	Solutions in the form of infinite series	254
10.6	Stress applied to the surface of a circular hole	255
10.7	Stress applied to the surface of a solid cylinder	258
10.8	The circular ring stressed over parts of its outer or inner surfaces	260
10.9	Inclusions in an infinite region	261
10.10	Curvilinear coordinates	264
10.11	The infinite region with an elliptic hole	266
10.12	Stresses near the tip of a crack	273
10.13	Griffith theory in two dimensions	277
10.14	The effect of friction between crack surfaces	280
10.15	The nearly rectangular hole and openings of other shapes	282
10.16	Surface loads on a semi-infinite region: two-dimensional theory	285
10.17	Surface loads on a semi-infinite region: three-dimensional theory	290
10.18	Anisotropic materials	297
10.19	Photoelasticity	299
10.20	Finite element methods	302
10.21	Finite difference methods	304
10.22	Integral methods	305
<b>11.</b>	<b>Time-dependent effects</b>	<b>308</b>
11.1	Introduction	308
11.2	Empirical laws of creep	311

11.3	Simple rheological models	314
11.4	Behaviour of more complicated systems	320
<b>✓ 12.</b>	<b>Crack phenomena and the mechanism of fracture</b>	<b>326</b>
12.1	Introduction	326
12.2	The strain energy associated with a crack	327
12.3	The effect of cracks on elastic properties	329
12.4	Energy theories of failure	337
12.5	Elementary theory of crack propagation	342
12.6	The dynamics of crack propagation	345
12.7	Disruption of rock by crack propagation	347
<b>13.</b>	<b>Strain waves</b>	<b>351</b>
13.1	Introduction	351
13.2	Elastic waves	352
13.3	Energy, particle velocity, and stress	355
13.4	Reflection and refraction at an interface	357
13.5	Seismic location of failures	359
13.6	Seismic measurements	362
13.7	Inelastic waves	367
<b>✓ 14.</b>	<b>The state of stress underground</b>	<b>371</b>
14.1	Introduction	371
14.2	Stresses due to gravity	372
14.3	Results of stress measurements	374
14.4	Tectonic, structural, and residual stresses	381
<b>15.</b>	<b>Underground measurements</b>	<b>384</b>
15.1	Introduction	384
15.2	Flat-jack measurements	384
15.3	Stressing of the interior of a borehole	388
15.4	Borehole deformation	390
15.5	Measurements at the end of a borehole	391
15.6	Inclusion stressmeters	393
15.7	Plate-bearing tests	394
15.8	Large-scale compression and shear tests	396
15.9	Measuring bolts	399
15.10	Gross displacements in the rock mass from precise levelling	402
15.11	Longitudinal displacements in long boreholes	403
<b>16.</b>	<b>Granular materials</b>	<b>405</b>
16.1	Introduction	405
16.2	The stress-strain curve for weathered rock and aggregate	405
16.3	Triaxial tests on soil and aggregate	407
16.4	Finely cracked rock	411
16.5	The Coulomb material: theoretical solutions	414
<b>✓ 17.</b>	<b>Geological and geophysical applications</b>	<b>425</b>
17.1	Introduction	425
17.2	Faulting	425

17.3 Geological stress systems	434
17.4 Overthrust faulting and sliding under gravity	440
17.5 The mechanics of intrusion	444
17.6 Finite strain	447
17.7 Finite homogeneous strain in two dimensions	450
17.8 Finite homogeneous strain in three dimensions	456
17.9 Joint and fault sets in sedimentary basins	459
17.10 Tectonophysics	461
17.11 Earthquake mechanics	465
<b>18. Mining and other engineering applications</b>	<b>470</b>
18.1 Introduction	470
18.2 Criteria for the design and support of underground excavations	471
18.3 The energy released by making an underground excavation	476
18.4 Tabular excavations	483
18.5 An analogue for determining displacements and stresses around tabular excavations	486
18.6 Digital methods for the analysis of three-dimensional excavations	489
18.7 Pillars and ribs	491
18.8 Support	497
18.9 Multiple excavations	501
18.10 Delineation of regions of failure	503
18.11 Rockbursts	505
18.12 Determination of rock quality for engineering purposes	515
18.13 Rock-slope stability	517
18.14 Rock breaking	521
18.15 Blasting	529
18.16 Vibration damage due to blasting	534
