# BED-LOAD TRANSPORT

## Theory and Practice

By

K. Stelczer

WATER RESOURCES PUBLICATIONS

## TABLE OF CONTENTS

<u>Chapter</u>		<u>Page</u>
1	INTRODUCTION . . . . .	1
2	DEFINITION OF BED-LOAD TRANSPORT . . . . .	19
	2.1 Sediment in Streams . . . . .	19
	2.2 Bed-Load Transport . . . . .	22
3	FACTORS AFFECTING BED-LOAD MOVEMENT . . . . .	29
	3.1 Physical Parameters Accessible to Measurement . . . . .	29
	3.1.1 Bed-load characteristics . . . . .	29
	3.1.1.1 The particle diameter [m] . . . . .	29
	3.1.1.2 Particle size distribution . . . . .	36
	3.1.1.3 Settling velocity . . . . .	38
	3.1.1.4 The particle shape . . . . .	40
	3.1.1.5 The density of bed-load particles [kg/m <sup>3</sup> ] . . . . .	42
	3.1.2 The stream characteristics . . . . .	43
	3.1.2.1 The velocity of flow . . . . .	43
	3.1.2.2 The pulsation of velocity [m/s] . . . . .	50
	3.1.2.3 The density of water . . . . .	51
	3.1.2.4 The kinematic viscosity of water missing . . . . .	53
	3.1.2.5 The depth of flow . . . . .	54
	3.1.2.6 Thickness of the laminar boundary layer . . . . .	57
	3.1.2.7 The surface slope of flow . . . . .	57
	3.1.2.8 The bottom slope . . . . .	58
	3.1.2.9 The quality of the bed material (bottom condition) . . . . .	59
	3.1.2.10 The bed roughness . . . . .	64
	3.2 Parameters not Accessible to Measurement . . . . .	70
4	DETERMINATION OF THE CRITICAL CONDITION . . . . .	71
	4.1 Description of the Critical Condition by Deterministic Relations . . . . .	72
	4.1.1 Interpretation of the critical condition . . . . .	74
	4.1.2 Forces tending to displace the particle . . . . .	78
	4.1.3 Force resisting displacement . . . . .	81
	4.1.4 Deterministic relations . . . . .	82
	4.1.4.1 "Impact theory" formulae . . . . .	82

## TABLE OF CONTENTS (CONTINUED)

<u>Chapter</u>		<u>Page</u>
	4.1.4.2 "Frictional drag theory" formulae . . . . .	128
4.2	Description of the Critical Condition by Stochastic Relations . . . . .	151
	4.2.1 A uniform definition of the critical condition . . . . .	151
	4.2.2 Probability distribution function of the critical condition . . . . .	152
	4.2.3 Effect of the primary transport parameters on the critical condition . . . . .	164
	4.2.4 Numerical examples for determining the critical condition . . . . .	168
5	DETERMINATION OF THE VIRTUAL RATE OF TRAVEL . . . . .	175
	5.1 The Results of Einstein . . . . .	176
	5.2 Results of Hubbel and Sayre . . . . .	180
	5.3 Results of Rossinskiy . . . . .	182
	5.4 Estimation of Virtual Rate of Travel by Stochastic Relations . . . . .	188
	5.4.1 Development of the stochastic relationship . . . . .	189
	5.4.2 Distribution function of step lengths . . . . .	191
	5.4.3 Single step length as a function of flow velocity . . . . .	194
	5.4.3.1 Numerical example for estimating the single step length . . . . .	205
	5.4.4 Distribution function of step number during the time interval t . . . . .	211
	5.4.4.1 Numerical example for estimating the step number . . . . .	213
	5.4.5 Distribution function of the virtual rate of travel . . . . .	214
	5.4.6 Bottom velocity vs. virtual rate of travel velocity . . . . .	219
	5.4.6.1 Numerical examples of calculating the virtual rate of travel . . . . .	222
	5.4.7 Bottom velocity vs. actual rate of bed-load travel . . . . .	227
	5.4.7.1 Numerical example of estimating the actual rate of bed-load travel . . . . .	229

<u>Chapter</u>		<u>Page</u>
6	BED-LOAD WEAR . . . . .	231
	6.1 Introduction . . . . .	231
	6.1.1 Changes in hydrodynamic conditions . . . . .	231
	6.1.2 Mechanical effects . . . . .	231
	6.1.2.1 Intermittent mechanical effects . . . . .	231
	6.1.2.2 Gradual mechanical effects . . . . .	231
	6.1.2.3 Chemical effects . . . . .	231
	6.2 Interpretation of Wearing . . . . .	232
	6.3 Factors Affecting Wear . . . . .	234
	6.3.1 Mineralogical-petrographical composition . . . . .	235
	6.3.2 Friction force . . . . .	235
	6.3.3 Impact force . . . . .	236
	6.3.4 Unit bed-load discharge . . . . .	237
	6.4 Mathematical Models of Bed-Load Wear . . . . .	238
	6.4.1 Wearing of moving particles . . . . .	238
	6.4.1.1 Wearing of prismatic particles . . . . .	238
	6.4.1.2 Wearing of spherical particles . . . . .	240
	6.4.2 Wearing of immobile particles . . . . .	241
	6.4.2.1 Wearing of prismatic particles . . . . .	241
	6.4.2.2 Wearing of spherical particles . . . . .	242
	6.5 The Wear Formula . . . . .	244
	6.5.1 Analytical expressions . . . . .	244
	6.5.2 Determination of the wearing coefficients . . . . .	246
	6.5.3 Determination of periods of movement and rest . . . . .	255
	6.5.4 Estimation of unit bed-load transport . . . . .	255
	6.6 Numerical Examples for Estimating Bed-Load Wear . . . . .	255
7	GENERAL CONCLUSIONS . . . . .	259
8	LITERATURE . . . . .	263
	APPENDIX 1 . . . . .	273
	APPENDIX 2 . . . . .	293
	APPENDIX 3 . . . . .	295
