Series Preface	xvii
Preface	xix
Acknowledgements	xxi
Chapter 1 Strategies for Classification of Landslides	1
<i>Moira J. Hansen</i>	
1.1 Introduction	1
1.2 Terminology	2
1.2.1 Bedrock	3
1.2.2 Soil	4
1.2.3 Creep	4
1.2.4 Falls	4
1.2.5 Slides	4
1.2.6 Flows	4
1.3 Classifications	5
1.4 Basic discriminating factors	8
1.4.1 Age of movement	8
1.4.2 Degree of activity	8
1.4.3 Geographic type	8
1.4.4 Geographic location	9
1.4.5 Climatic type	9
1.4.6 Type and size of material moved	10
1.4.7 Underlying geology	11
1.4.8 Type of movement	14
1.4.9 Velocity of movement	15
1.4.10 Water content, air or ice	16
1.4.11 Causes of movement and triggering mechanisms	16

1.4.12 Morphology of deposited material and of failure surface	18
1.4.13 Geotechnical properties	23
1.5 Conclusions	23
Chapter 2 Properties and Behaviours of Soils Relevant to Slope Instability	27
<i>C. Kenney</i>	
2.1 Introduction	27
2.2 Soil composition	27
2.3 Phase relationships	29
2.4 Inherent properties of soils and minerals	32
2.4.1 Mineralogy	32
2.4.2 Particle-size distribution	34
2.4.3 Plasticity and activity	36
2.5 Fluid flow and the principle of effective stress	39
2.5.1 Head and pressure	39
2.5.2 Principle of effective stress	41
2.5.3 Permeability	43
2.5.4 Flow nets	45
2.6 Compressibility and stress history of soil	49
2.7 Shear strength	52
2.7.1 Friction: basic strength property	53
2.7.2 Effective-stress shear strength properties of sands ..	55
2.7.3 Triaxial compression test	58
2.7.4 Effective-stress shear strength properties of clays	61
2.7.5 Undrained shear strength	63
Chapter 3 Ground Investigation, Sampling and Testing for Studies of Slope Instability	67
<i>D. J. Petley</i>	
3.1 Introduction	67
3.2 Ground investigation	68
3.2.1 Introduction	68
3.2.2 Aims of ground investigation	68
3.2.3 Organization of ground investigation	69
3.3 Sampling	77
3.3.1 Introduction	77
3.3.2 Sampling in soils	77
3.3.3 Sampling of rocks	81
3.4 Laboratory testing	81
3.4.1 Introduction	81
3.4.2 Measurement of shearing resistance of soils	81

3.4.3 Shear box tests	82
3.4.4 Triaxial tests	84
3.4.5 Measurement of residual shear strength	85
3.4.6 Difficulties in laboratory measurements of the shear strength of soils	89
3.4.7 Shear strength of rocks	91
3.5 <i>In situ</i> testing of soils and rocks	93
3.5.1 Introduction	93
3.5.2 <i>In situ</i> tests in clays	93
3.5.3 <i>In situ</i> tests in sands	97
3.5.4 <i>In situ</i> tests in rock	97
Chapter 4 Field Assessment of Slope Instability	103
<i>M. J. Crozier</i>	
4.1 Introduction	103
4.2 Stability assessment	103
4.2.1 Stability criteria	104
4.2.2 Classification of stability criteria	104
4.3 Recognition of instability	121
4.3.1 Identification of landslides	121
4.3.2 Identification of potential instability	137
4.4 Conclusions	140
Chapter 5 Slope Instrumentation and Monitoring	143
<i>J. A. Franklin</i>	
5.1 Introduction	143
5.1.1 Remedial works to stabilize an active landslip	144
5.1.2 Precautionary monitoring where critical slopes could become unstable	146
5.2 Types of instrument	148
5.2.1 Movement monitoring	148
5.2.2 Groundwater instrumentation	158
5.2.3 Soil and rock pressures and loads on supports	161
5.2.4 Monitoring of ground vibrations	164
5.3 Planning and design of the monitoring system	164
5.3.1 Preliminary studies	165
5.3.2 Instrument selection and locations	165
5.3.3 Installation and readings	166
Chapter 6 Methods of Stability Analysis	171
<i>J. Graham</i>	
6.1 Introduction	171
6.2 Historical Development	172

6.3	Introductory Analysis	174
6.3.1	Infinite slope analysis	175
6.3.2	' $\phi_u = 0$ ' analysis	177
6.3.3	'Ordinary' slices method	179
6.3.4	Sliding block analysis	180
6.4	General statement of limit equilibrium of the slices method	183
6.5	Safety factor	184
6.6	General development of safety factor equations	186
6.6.1	Simplified Bishop's method	189
6.6.2	Janbu's simplified method	191
6.6.3	Janbu's rigorous method	192
6.6.4	Spencer's method	193
6.6.5	Morgenstern-Price method	194
6.6.6	Comparison of the various methods	197
6.7	Library solutions	199
6.7.1	The Taylor (1948) solution	199
6.7.2	Bishop and Morgenstern (1960)	201
6.7.3	Computer methods	203
6.8	Discussion and conclusions	206
6.8.1	First-time slides in intact clays	207
6.8.2	Movements on pre-existing failure surfaces	208
6.8.3	Rolled-filled embankments	208
6.8.4	River banks in sensitive clays	209
6.8.5	River banks in varved plastic clays	209
6.8.6	Permanent cuttings in stiff fissured clays	209
6.8.7	Progressive failures in stiff clays and clay shales	210
6.8.8	Embankments on soft ground	210
6.9	Conclusions	211
Chapter 7 Rockfalls		217
<i>W. B. Whalley</i>		
7.1	Introduction	217
7.2	Problems of definition	217
7.2.1	Morphology and materials	220
7.3	Previous geomorphological studies	222
7.3.1	Qualitative descriptions and catalogues	223
7.3.2	Engineering geological aspects of rockfalls	224
7.3.3	Quantitative data	225
7.3.4	Magnitude-frequency inferences from rockfall data	227
7.4	Rockfall as a weathering process	230
7.4.1	Freeze-thaw	231
7.4.2	Crack propagation	234

7.4.3	Exfoliation and parallel jointing	236
7.5	Approaches through rock mechanics	238
7.5.1	Progressive failure of slopes and rockfalls	238
7.5.2	The role of water in cliff instability	239
7.6	Localised conditions on a rock face and mountain morphology	241
7.7	Rockfall control by environmental factors	245
7.8	Conclusions	247
Chapter 8 Debris Flow		257
<i>A. M. Johnson with contributions by J. R. Rodine</i>		
8.1	Introduction	257
8.2	Morphologic features of debris-flow deposits	263
8.2.1	Introduction	263
8.2.2	West arm of 1917 Surprise Canyon debris-flow deposit	266
8.2.3	Debris-flow deposits at Klare Springs	274
8.3	Properties of debris	277
8.4	Field methods of estimating properties of debris	290
8.4.1	Introduction	290
8.4.2	Measurement of density	292
8.4.3	Measurement of shear strength k	292
8.4.4	Measurement of cohesion C and friction ϕ	297
8.4.5	Discussion of measurements of strength parameters	299
8.4.6	Measurement of shear strength k , viscosity μ_b , and flow rate of moving flows	302
8.4.7	Calculation of mean velocity of debris flow by measuring tilt of flow	305
8.4.8	Summary of methods	311
8.5	Source areas and processes of initiation of debris flows	311
8.5.1	Introduction	311
8.5.2	Initiation by landsliding—single sources	318
8.5.3	Initiation by landsliding—multiple sources	329
8.5.4	Initiation by 'firehose effect'	331
8.5.5	Idealization of the mobilization processes	333
8.6	Analysis of the potential for debris flow	333
8.6.1	Introduction	335
8.6.2	Potential for debris flow	
8.6.3	Comparison of water contents of flowing debris and <i>in situ</i> soil—the mobility index	341
8.6.4	Mobility indices for selected debris-flow source areas	347
8.6.5	Ability to estimate potential of debris flow	355

Chapter 9 Mudslides	363
<i>D. Brunsten</i>	
9.1 Introduction	363
9.2 Terminology	363
9.3 Morphology	366
9.3.1 Source	366
9.3.2 Track	372
9.3.3 Accumulation zone	377
9.4 Mudslide materials and geotechnical properties	383
9.5 The nature of mudslide movements	387
9.5.1 Measurement	387
9.5.2 Surface movements	387
9.5.3 Edge displacement	397
9.5.4 Sub-surface measurement	399
9.6 Movement patterns—results	401
9.6.1 Velocities	401
9.6.2 Edge displacements	401
9.6.3 Sub-surface profiles	403
9.6.4 Temporal patterns	407
9.7 Mechanisms of mudslide movements	410
Chapter 10 Submarine Slope Instability	419
<i>D. B. Prior and J. M. Coleman</i>	
10.1 Introduction	419
10.2 Early concepts	420
10.3 Modern sea floor survey methods	421
10.3.1 Navigation	422
10.3.2 Echo-sounding	422
10.3.3 Side-scan sonar	422
10.3.4 Continuous seismic profiling	425
10.4 Types of instability	426
10.4.1 Submarine falls	427
10.4.2 Slides	427
10.4.3 Flows	432
10.5 Factors responsible for submarine slope instability	439
10.5.1 Stresses	440
10.5.2 Sediment strength	444
10.6 Magnitude and frequency considerations	447
10.7 Conclusions	449
Chapter 11 Landslips in Sensitive Clays	457
<i>S. P. Bentley and I. J. Smalley</i>	
11.1 Introduction	457

11.2 Geotechnical properties	460
11.3 Mineralogy	462
11.4 Soil structure	463
11.5 Morphology	465
11.6 Failure mechanisms	466
11.6.1 Initial failure	467
11.6.2 Rotational failure	467
11.6.3 Earthflows	469
11.7 Frequency	469
11.8 Geochemical processes relating to sensitivity	470
11.9 Geological factors relating to landslips in sensitive clay ..	474
11.10 Stabilization and hazard-zone mapping	475
11.11 The St. Jean Vianney landslide of 4 May 1971	476
11.11.1 Geological features of the site	478
11.11.2 An ancient landslide at St. Jean Vianney	479
11.11.3 Geotechnical properties	479
11.11.4 Meteorological data	481
11.11.5 Pre-slide events	481
11.11.6 The landslide	484
11.11.7 Final state of the crater	484
11.11.8 Summary	485
Chapter 12 Flowslides	491
<i>W. Colin Rouse</i>	
12.1 Morphology and description	491
12.2 Materials: properties and resulting structures	492
12.3 Mechanics of failure	496
12.4 Pattern and rates of movement	504
12.5 Case study: Blackhawk, USA	510
12.5.1 Morphology	511
12.5.2 Internal structure	512
12.5.3 Mechanics of the Blackhawk flowslide	513
12.6 Importance of flowslides	516
Chapter 13 Landslide Hazard Analysis	523
<i>A. Hansen</i>	
13.1 Introduction: natural hazards	523
13.2 General considerations	527
13.3 Hazard and risk probabilities	530
13.4 Data sources for background information	532
13.5 Data collection	535
13.5.1 Parameters	535
13.5.2 Geomorphological or grid units	537

13.5.3	Checklists, inventories and data banks	539
13.6	Outline of methods of analysis	543
13.7	Direct mapping	545
13.7.1	Inventory maps	545
13.7.2	Geomorphological maps	547
13.7.3	Maps of linear constructions	563
13.7.4	Mapping proofs of stability	564
13.8	Indirect mapping	564
13.8.1	Land systems	565
13.8.2	Landslide isopleths	565
13.8.3	Multivariate analysis: simple statistical techniques	568
13.8.4	Multivariate complex statistical techniques	584
13.9	Present trends in landslide hazard analysis	588
13.10	Responses to the landslide hazard	590
13.10.1	Consequences of failures	591
13.10.2	Pre-failure strategies	592
	Subject Index	603
