TABLE OF CONTENTS

PART I: MODELING

1. INTRODUCTION		1
1.1. Diaphragm Walls		1
1.2. Current Design Practice		3
1.3. Objective and Scope of Study		4
2. METHODOLOGY OF PROPOSED ANALYTICAL MODEL		5
2.1. Model Generation		5
2.2. Soil Material Modeling		5
3. COMPARISON WITH OTHER MODELING TECHNIQUES		10
3.1. Soil Spring Modeling		10
3.2. SOILSTRUCT Modeling		18
3.3. Generalized Effective Stress Modeling		22
3.4. Summary		33

PART II: PARAMETRIC STUDIES

4. PARAMETRIC STUDIES USING THE PROPOSED ANALYTICAL MODEL		36
4.1. Objective and Scope		36
4.2. Parameters Investigated		36
4.3. The Base Model		36
4.3.1. Geometry, Soil Profile and Other Characteristics		36
4.3.2. Stages of Excavation and Construction		40
4.3.3. Displacement Contours		40
4.3.4. Wall Displacements, Bending Moments, Ground Movement, and Strut Forces		55
4.4. Effect of Soil Profile		60
4.5. Effect of Tunnel Depth		69
4.6. Effect of Tunnel Width		76
4.7. Effect of Wall Stiffness		83
4.8. Effect of Strut Vertical Spacing		90
5. SUMMARY AND CONCLUSION		97
6. REFERENCES		98
