

Building response to tunnelling

Case studies from construction of the Jubilee Line Extension, London

VOLUME 1 PROJECTS AND METHODS

The results of the collaborative research project Subsidence damage to buildings: prediction, protection and repair, carried out by Imperial College with the sponsorship of London Underground Limited, CIRIA, the Geotechnical Consulting Group and other industry organisations, under the DETR-EPSRC LINK Construction Maintenance and Refurbishment Programme.

VOLUME 1 PROJECTS AND METHODS

Summary.....	iii
Foreword.....	iv
Acknowledgements.....	v
Glossary.....	xv
Acronyms.....	xvii
Notation.....	xix
1 Introduction.....	1
2 Structures and contracts of the Jubilee Line Extension.....	9
3 Assessment methods used in design.....	23
4 The LINK CMR research project.....	45
5 Geology and geotechnical properties.....	57
6 St James's and St James's Park: a brief history of their development.....	83
7 Westminster and Waterloo areas.....	95
8 The London Bridge station area.....	103
9 Bermondsey and Rotherhithe.....	115
10 Tunnelling methods.....	127
11 Protective measures.....	135
12 Finite element analysis of St James's Park greenfield reference site.....	177
13 Finite element analyses of ground movements from tunnelling below Southwark Park.....	185
14 Elizabeth House: settlement predictions.....	195
15 Settlement predictions for Neptune, Murdoch, and Clegg Houses and adjacent masonry walls.....	217
16 JLE construction works at London Bridge station.....	229
17 Some aspects of construction on JLEP Contracts 105 and 106.....	249
18 Measuring techniques and their accuracy.....	273
19 Data handling and storage.....	301
20 Grout intensities.....	311
21 Results of the research.....	315
