Contents

Preface	ix
Notation	xiii
PART ONE: INTRODUCTION	1
1 Materials and Scales	3
1.1 Governing Laws and Principles	3
1.2 Materials and Internal Spatial Scales	6
1.3 Temporal Scales	14
1.4 Waves and Scales	15
1.5 Relative Scales	16
1.6 Waves and Particulate Materials	16
1.7 Final Comments	20
1.8 Suggested Reading	21
PART TWO: PARTICULATE MATERIALS	23
2 Characterization of Particles and Particulate Media	25
2.1 Continuous and Discrete Media	25
2.2 Grain Formation and Soil Deposits	26
2.3 A Single Particle – Characteristics	30
2.4 Particulate Media – Characteristics	45
2.5 Soil Classification	54
2.6 Final Comments	56
2.7 Suggested Reading	57
3 Particle-Fluid Interactions	59
3.1 Water and Electrolytes	59
3.2 Particle-Fluid Interactions	62
3.3 Interparticle Forces	71
3.4 Effective Stress	82
3.5 Fabric	88

3.6	Fine or Coarse?	98
3.7	Final Comments	101
3.8	Suggested Reading	102
4	Load-Deformation Behavior	103
4.1	Stiffness	103
4.2	Strain Regimes and Thresholds	117
4.3	Stress-Dependent Volume Change	122
4.4	Fabric Evolution	126
4.5	Shear Strength	131
4.6	K_0 -Loading – Memory	142
4.7	Yield Surface – Critical State Soil Mechanics	143
4.8	Undrained Response	149
4.9	Drained and Undrained Load-Deformation Behavior	152
4.10	Localization	155
4.11	Final Comments	157
4.12	Suggested Reading	158
5	Conduction and Diffusion – Soil Behavior Revisited	159
5.1	Conduction and Diffusion Phenomena	159
5.2	Energy Coupling	165
5.3	Drying – Unsaturated Soils	169
5.4	Cementation	172
5.5	Thixotropy	173
5.6	Soil Behavior Revisited	175
5.7	Suggested Reading	182
PART THREE: ELASTIC WAVES AND SOILS		183
6	Elastic Waves in the Continuum	185
6.1	Concepts in Continuum Mechanics	185
6.2	Wave Equation – Body Waves in an Infinite Space	187
6.3	Solution to the Wave Equation – Spectrum	191
6.4	Wave and Particle Velocity – Mechanical Impedance	191
6.5	Propagation in Bounded Media	193
6.6	Wave Phenomena in Media with Interfaces or Inclusions	195
6.7	Lossy Media	200
6.8	Total Attenuation	204
6.9	Phase and Group Velocities in Dispersive Media	205
6.10	Velocity and Attenuation – Different Propagation Modes	207
6.11	Anisotropy and Quasi-Propagation	209
6.12	Large-Amplitude Excitation	213
6.13	Final Comments	213
6.14	Suggested Reading	215

7	Elastic Waves in Particulate Media	217
7.1	Viscoelastic Models	217
7.2	Short Wavelength: Dispersion	224
7.3	Dry Particulate Media	226
7.4	Unsaturated Particulate Media	232
7.5	Saturated Media: Low Frequency Parameters	233
7.6	Spectral Response in Saturated Media – Biot's Theory	238
7.7	Large-Amplitude Excitation	245
7.8	Final Comments	246
7.9	Suggested Reading	248
8	Velocity and Attenuation: Data and Empirical Relations	249
8.1	Continuous Media – Fluid and Solids	249
8.2	Degree of Saturation	249
8.3	Isotropic State of Stress – Porosity	254
8.4	Stress Anisotropy and Inherent Anisotropy	260
8.5	Strain Effects	264
8.6	Contact-Level Electrical Forces	264
8.7	Cementation – Decementation	266
8.8	Time-Dependent Effects	269
8.9	Final Comments	272
8.10	Suggested Reading	274
9	Laboratory Measurement Methods	275
9.1	Preliminary Measurement Concepts	275
9.2	Soil Cells	276
9.3	Peripheral Electronics and Transducers	278
9.4	Signals – Different Excitation Modes	284
9.5	Near and Far Field – Directivity	296
9.6	Final Comments	298
9.7	Suggested Reading	299
	PART FOUR: ELECTROMAGNETIC WAVES AND SOILS	301
10	Electromagnetism	303
10.1	Charge – Conservation	303
10.2	Static Charges in Free Space	304
10.3	Moving Charges in Free Space	308
10.4	Time-Varying Fields in Free Space	310
10.5	Material Medium – Constitutive Equations	311
10.6	Electromagnetism – Maxwell's Equations	315
10.7	Wave Equation – Electromagnetic Spectrum	316
10.8	Constitutive Parameters – Complex Quantities	318
10.9	Propagation Parameters	319
10.10	Wave Propagation in Heterogeneous Media	321
10.11	Forces and Torques – Dynamics	325

10.12	Final Comments	326
10.13	Suggested Reading	327
11	Electromagnetic Properties: Physical Description and Analytical Models	329
11.1	Magnetic Permeability	329
11.2	Conductivity	336
11.3	Polarization	341
11.4	Magnetization, Polarization, and Conduction	359
11.5	Final Comments	362
11.6	Suggested Reading	364
12	Electromagnetic Properties: Data and Empirical Relations	365
12.1	Magnetic Permeability	365
12.2	Conductivity	368
12.3	Complex Permittivity	374
12.4	Final Comments	387
12.5	Suggested Reading	388
13	Laboratory Measurement Methods	391
13.1	Circuit Elements: Impedance and Admittance	392
13.2	Low Frequency Measurements	399
13.3	High Frequency Measurements	411
13.4	Processing and Data Interpretation	415
13.5	Final Comments	427
13.6	Suggested Reading	428
PART FIVE: PROCESS MONITORING		429
14	Process Monitoring with Elastic and Electromagnetic Waves	431
14.1	Sedimentation – Soft Sediments	431
14.2	Pressure Diffusion (Consolidation)	436
14.3	Concentration Diffusion	444
14.4	Cementation: Soil-Cement Mixtures	449
14.5	Electroseismic and Seismoelectric Effects	452
14.6	Final Comments	455
Appendix: Mathematical Concepts		457
References		461
Index		485
