Contents

Foreword, by Michel Rolant	ix
Preface to the English edition	xi
Chapter 1 General Considerations	1
1.1 Attempt at a definition	2
1.2 Power and energy	2
1.3 Hydroelectricity and micro hydroelectric power stations	4
1.4 Utilization, costs and regulations	7
1.5 Environmental impact	7
1.6 Installation criteria	8
1.7 Useful data and conversion factors	8
Bibliography and further reading	11
Chapter 2 Hydraulic Resources	13
2.1 Water as an energy resource: temporal and spatial variations ...	13
2.2 Water as an energy resource: climatic variations	15
2.2.1 The water cycle and the drawing up of a balance sheet – the variable nature of the resource	15
2.2.2 The hydrological balance: measurements and calculation	17
2.3 The flow of a watercourse: certainties and uncertainties in the resource	25
2.3.1 Measurement of flow in a watercourse	26
2.3.2 The French gauging network: organization and types of station	32
2.3.3 Use of the results	33
2.4 Determination of the useful flow: an example	44
2.4.1 Effect of choice of minimum operational flow on the production of electricity	44
2.4.2 Example of the calculation of minimum operation flow ...	44
2.4.3 The reserved flow: its effect upon exploitable flow	46
Bibliography and further reading	48

Chapter 3	The planning and construction of micro hydroelectric power stations	49
3.1	Site works needed for a hydroelectric installation	49
3.2	Criteria for site selection	51
3.3	Preliminary geological considerations	52
3.3.1	The geological approach	52
3.3.2	Identification of sensitive zones	53
3.4	Site, foundations, anchorage and stability	58
3.4.1	Coping with geological conditions – mechanical properties	58
3.4.2	Water intakes	59
3.4.3	Inlet and outlet channels	65
3.5	The role of the engineer	67
3.5.1	Design of an MHPS and management of the construction	67
3.5.2	Cost of the engineering aspects	69
	Bibliography and further reading	69
Chapter 4	Electromechanical equipment	71
4.1	Historical background	71
4.2	Some general points on hydraulic turbines	75
4.2.1	Gross, net and effective heads	75
4.2.2	General layout	78
4.3	Elements of turbine operation	79
4.3.1	Velocity diagram	80
4.3.2	Calculation of torque on the shaft – indicated power	81
4.3.3	Operation of impulse and reaction turbines	82
4.3.4	Energy losses	83
4.3.5	Efficiencies	84
4.4	Scaling laws for hydraulic turbines	86
4.4.1	Specific velocity	86
4.4.2	Application to the classification of turbines	87
4.5	Various types of turbine	88
4.5.1	Impulse turbines	88
4.5.2	Reaction turbines	91
4.6	Choice of turbine	95
4.7	Developments specifically related to micro hydro-power stations	98
4.8	Speed regulation of turbo-alternator units	100
4.8.1	Principles of speed regulation	102
4.8.2	Mechanical regulators	103
4.8.3	Electrical governors	104

4.9	Production, transformation and transmission of energy	105
4.9.1	Introduction	105
4.9.2	Production of electricity for an isolated system	105
4.9.3	The reproduction of electricity for a connected network	110
4.9.4	Transformation and transmission of the energy	114
4.10	Overall energy balance of a hydroelectric power station	117
4.10.1	Turbine-alternator transmission gear	117
4.10.2	Overall energy balance	118
4.11	Example	119
	Bibliography and further reading	121
Chapter 5 Project economics: capital investment and profitability		123
5.1	Project economics: capital investment and profitability	123
5.2	Conditions for the use of micro hydro-power stations	124
5.3	Cost of an installation	124
5.4	Criteria affecting the economic viability of a micro hydroelectric power station: income from production	126
5.4.1	Profitability criteria	126
5.4.2	Income from a micro hydro-power station	127
5.4.3	Annual running costs	130
5.4.4	Economic cash flow	130
5.4.5	Financial profitability	131
5.4.6	Financial cash flow	131
5.4.7	Examples of trading accounts	131
5.5	Methods of financing an installation	132
5.6	Micro hydroelectric power stations in the developing countries	132
	Bibliography and further reading	134
Chapter 6 Legal aspects and French legislation		136
6.1	Early regulations on the use of watercourses as an energy source	136
6.2	Legislation relating to the production of electricity	138
6.2.1	Legislation of 16 October 1919	138
6.2.2	Legislation of 8 April 1946	138
6.2.3	Environmental protection	138
6.2.4	Legislation of 15 July 1980	140
6.3	The taking of evidence in applications to harness watercourses for the production of electricity	140
	Bibliography and further reading	144

Chapter 7 Environmental impact	145
7.1 Visual integration	145
7.2 Noise impact	147
7.3 Biological impact	149
7.3.1 The water and the river	149
7.3.2 Disturbance of the water conditions	150
7.3.3 River life	151
7.3.4 The fragility of the ecosystem and potential threats	154
7.3.5 Impact on the ecosystem	156
7.3.6 Countermeasures	158
7.4 Conclusions	164
Bibliography and further reading	164
Chapter 8 Micro hydroelectric power stations throughout the world ...	166
8.1 Industrialized countries, GNP/C > 36 000 FF	166
8.2 Countries with a GNP/C of 18 000–36 000 FF	169
8.3 Countries with a GNP/C of 2700–18 000 FF	170
8.4 Countries with a GNP/C of 1350–2700 FF	175
8.5 Poor countries, a GNP/C > 1350 FF	176
Bibliography and further reading	178
In conclusion	180
Index	182
