

Order Number 8725840

Stable riprap size for open channel flows

Maynard, Stephen Theodore, Ph.D.

Colorado State University, 1987

Microfilm edition of the original work. The microfiche cards contain the same information as the original work. The microfiche cards are arranged in a spiral binding.

This microfiche edition of the original work is a reproduction of the original work. The microfiche cards contain the same information as the original work. The microfiche cards are arranged in a spiral binding.

Most photographs reproduce the quality of the original work. The microfiche cards contain the same information as the original work. The microfiche cards are arranged in a spiral binding.

Ann Arbor, MI 48106

TABLE OF CONTENTS

	<u>Page</u>
CHAPTER 1: INTRODUCTION.....	1
CHAPTER 2: LITERATURE REVIEW.....	4
2.1 Applicability of Existing Riprap Sizing Methods That Use a Constant Shields Coefficient or the Logarithmic Velocity Laws.....	4
2.2 Existing Critical Velocity Methods for Particle Stability.....	10
2.3 Previous Studies on the Effects of Gradation, Thickness, and Shape on Riprap Stability.....	13
2.4 Effects of Side Slope on Particle Stability.....	15
2.5 Summary.....	17
CHAPTER 3: EXPERIMENTAL INVESTIGATION.....	19
3.1 Test Facilities.....	19
3.2 Model Riprap.....	22
3.3 Failure Criteria.....	22
3.4 Test Procedure and Data Collection.....	26
3.5 Data Restrictions.....	27
CHAPTER 4: ANALYSIS AND RESULTS.....	31
4.1 Applicability of Existing Sizing Relations Using a Constant Shields Coefficient or Logarithmic Velocity Laws.....	31
4.2 Development of Critical Velocity Relation.....	35
4.3 Effects of Gradation, Thickness, and Shape on Riprap Stability.....	43
4.4 Effects of Side Slope on Riprap Stability.....	48
CHAPTER 5: SAFETY FACTORS, SIZING NOMOGRAPH, AND DESIGN APPLICATION.....	71
5.1 Safety Factors.....	71
5.2 Sizing Nomograph.....	72
5.3 Design Application.....	73
5.4 Example Design.....	73
5.5 Summary of Limitations.....	75

TABLE OF CONTENTS (Continued)
