## CONTENTS

Preface . . . . .	7
List of symbols . . . . .	15
<b>A Reservoir function and basic tools for its analysis . . . . .</b>	<b>19</b>
1 Basic function of water reservoirs . . . . .	19
1.1 Function and significance of reservoirs in water management . . . . .	19
1.2 The development of water reservoirs . . . . .	20
1.2.1 Construction of reservoirs on the territory of present-day Czecho- slovakia . . . . .	21
1.2.2 Worldwide construction of reservoirs . . . . .	26
1.3 Modern trends in reservoir-design . . . . .	28
1.4 Performance of the reservoir . . . . .	38
1.4.1 Basic performance of the water storage reservoir . . . . .	39
1.4.2 Classification of reservoirs according to origin and location . . . . .	41
1.4.3 Classification of reservoirs according to purpose . . . . .	48
1.4.4 Influences affecting the performance of the reservoir (flow regime, human intervention, complex utilization) . . . . .	54
2 Basic methods and tools for the calculation of reservoir function . . . . .	61
2.1 Reservoirs designed according to natural chronological flow series . . . . .	61
2.1.1 Graphical methods . . . . .	62
2.1.2 Mathematical methods . . . . .	74
2.2 Probability and statistical methods . . . . .	80
2.2.1 Markov processes . . . . .	81
2.2.2 Application of probability and statistical methods in water manage- ment . . . . .	85

<b>B</b>	<b>Storage function of reservoirs . . . . .</b>	<b>89</b>
3	Basic data for calculating the storage function of reservoirs . . . . .	91
3.1	Hydrological records and their processing . . . . .	91
3.1.1	Selection and evaluation of hydrological series . . . . .	91
3.1.2	Solutions where there is a lack of direct hydrological observations . . . . .	98
3.1.3	Statistical and probability processing of hydrological series . . . . .	101
3.1.4	Statistical parameters and characteristics of a random variable . . . . .	105
3.1.5	Theoretical probability distributions used in water management . . . . .	109
3.1.6	Estimates of exceedance probability curve parameters by means of quantiles . . . . .	128
3.1.7	Tables and probability papers for constructing the exceedance prob- ability curves . . . . .	133
3.1.8	Applicability of various probability distributions . . . . .	142
3.1.9	Accuracy of statistical characteristics in water management . . . . .	143
3.1.10	Evaluation of goodness-of-fit between empirical and theoretical dis- tributions . . . . .	146
3.1.11	Random processes and sequences in hydrology and water manage- ment . . . . .	148
3.1.12	Correlation (autocorrelation) functions of random processes . . . . .	151
3.1.13	Spectral densities of random processes . . . . .	156
3.2	Modelling flow series . . . . .	159
3.2.1	Modelling annual flow sequences . . . . .	159
3.2.2	Modelling monthly flow sequences . . . . .	162
3.2.3	Modelling sequences of monthly flows in a system of stations . . . . .	166
3.3	Inflow to a reservoir . . . . .	168
4	Release (withdrawal) from a reservoir . . . . .	173
4.1	Users' water demand . . . . .	173
4.1.1	Requirements of public water supply . . . . .	175
4.1.2	Demands on water for industry . . . . .	176
4.1.3	Demands on water for agriculture . . . . .	177
4.1.4	Demands on water for hydro-power production . . . . .	177
4.1.5	Water demands of other users . . . . .	178
4.2	How to meet the water demand . . . . .	179
4.3	Water losses from reservoirs . . . . .	181
4.4	Reliability of water supply from reservoirs . . . . .	184
4.5	Location of the active storage capacity in a reservoir . . . . .	187

5	Over-year release control . . . . .	191
5.1	Method based on analytical solutions of the storage function . . . . .	194
5.1.1	Over-year component of the storage capacity . . . . .	195
5.1.2	Within-year (seasonal) component of the storage capacity . . . . .	208
5.2	Method based on synthetic discharge series . . . . .	217
5.2.1	Over-year component of the storage capacity . . . . .	221
5.2.2	Total size of the storage capacity . . . . .	222
5.3	Evaluation of the results of theoretical calculations and further influences on the design of the storage capacity . . . . .	224
6	Within-year (seasonal) release control . . . . .	234
6.1	Storage capacity determined with the help of exceedance probability curves of necessary volumes . . . . .	236
6.2	Determination of the yield (release, withdrawal) from a reservoir using fitted theoretical curves . . . . .	237
6.3	Calculations of within-year release control in synthetic discharge series . . . . .	238
6.4	Accuracy of results in within-year release control . . . . .	239
6.4.1	Error in the size of the storage capacity resulting from the application of series of mean monthly discharges . . . . .	239
6.4.2	Influence of the input real series on the characteristics of release control in an annual cycle . . . . .	241
6.4.3	Corrections of the storage capacity with regard to evaporation losses . . . . .	242
6.4.4	Water-management plan for reservoirs with power plants . . . . .	242
6.4.5	Within-year release control using curves of exceeding mean daily discharges . . . . .	244
7	Short-term release control . . . . .	246
7.1	Daily release control . . . . .	246
7.1.1	Capacity of a water tank . . . . .	246
7.1.2	Daily release control for hydro-power generation . . . . .	248
7.1.3	Daily release control for irrigation . . . . .	256
7.2	Weekly release control . . . . .	257
7.3	Short-term non-periodical release control . . . . .	261
8	River flow regulation . . . . .	263
8.1	River flow regulation using synthetic discharge series . . . . .	267
8.2	Determination of the size of the storage capacity using exceedance probability curves of necessary volumes . . . . .	269

12		
8.3	Over-year river flow regulation . . . . .	269
8.4	Real operation for river flow regulation and its consequences . . .	271
9	Release control in a cascade of reservoirs (several reservoirs on one stream) . . . . .	275
9.1	Analysis of cascades of reservoirs using synthetic discharge series . .	276
9.2	Principles of release control of reservoirs in the cascade for hydro- electric power production . . . . .	278
10	Release control in a system of reservoirs . . . . .	281
10.1	Technical parameters of release control in a system of reservoirs for public water supply . . . . .	282
10.2	System with water diversion. . . . .	286
10.3	Special cases of release control . . . . .	290
10.3.1	Release control with various water supply reliabilities . . . . .	290
10.3.2	Release control in the period of the first filling of a reservoir . . . .	292
<b>C</b>	<b>Flood-control function of reservoirs . . . . .</b>	<b>295</b>
11	Data for the analysis of flood-control reservoirs . . . . .	297
11.1	Hydrological data . . . . .	297
11.1.1	Maximum flood discharges . . . . .	298
11.1.2	Flood volumes . . . . .	300
11.1.3	Model of a flood regime on a stream . . . . .	303
11.1.4	Accuracy of the characteristics of flood regimes . . . . .	304
11.2	Release from a reservoir . . . . .	305
11.3	Reliability of flood control . . . . .	309
11.4	Properties of the flood-control capacity . . . . .	311
11.5	Flood-control release methods . . . . .	311
12	The flood-control effect of reservoirs . . . . .	314
12.1	Analysis of isolated reservoir flood control effect . . . . .	314
12.2	How to use the active storage capacity for flood control . . . . .	315
12.3	Utilization of the surcharge capacity . . . . .	324
12.4	Flood routing in the stream channel . . . . .	326
12.5	Flood control at the time of reservoir construction . . . . .	326

<b>D</b>	<b>Reservoir operation</b> . . . . .	329
13	Rules for release control from reservoirs in day-to-day operation	330
13.1	Rule curves and their construction . . . . .	331
13.2	Failures in water supply . . . . .	338
13.3	Reservoir operation during floods . . . . .	338
13.4	Day-to-day operation and over-year reservoir cycles . . . . .	339
14	The function of reservoirs—their monitoring and evaluation . . .	341
<b>E</b>	<b>Effectiveness of water reservoirs and their function in systems and in the environment</b> . . . . .	343
15	Reservoir function in water-management systems . . . . .	343
15.1	Characteristics of water-management systems with reservoirs . . .	343
15.2	Definition and analysis of water-management systems with reservoirs	345
15.2.1	Power and irrigation water-management systems . . . . .	346
15.2.2	Irrigation water-management system . . . . .	348
15.2.3	Water-management system for the supply of drinking water . . . . .	351
15.2.4	Optimal cooperation of a system of reservoirs for public water supply	354
15.2.5	Optimization of multi-purpose systems with river flow regulation	356
15.2.6	Water-management systems for flood control . . . . .	358
15.3	Function of small reservoirs . . . . .	362
15.3.1	Conservation function of small reservoirs . . . . .	362
15.3.2	Flood-control function of small reservoirs . . . . .	364
15.3.3	Function of the aquatic environment of small reservoirs . . . . .	367
16	Economic effectiveness of reservoirs . . . . .	368
16.1	Evaluation of the effectiveness of reservoirs . . . . .	368
16.1.1	Evaluation of the effectiveness of reservoir construction by the method of comparative (relative) effectiveness . . . . .	369
16.1.2	Evaluation of the effectiveness of reservoir construction by the method of total (absolute) effectiveness . . . . .	373
16.1.3	Evaluation of alternatives of reservoirs by the method of decision analysis . . . . .	380
16.2	Cost distribution of multi-purpose reservoirs . . . . .	384
16.2.1	The LPI method . . . . .	384

16.2.2	Directives issued by the Ministry of Forestry and Water Management of Czechoslovakia concerning the principles of evaluating the efficiency of investment for water management constructions and the distribution of costs of multi-purpose reservoirs . . . . .	387
16.3	Economic significance of the reliability of water supply and flood control. . . . .	389
16.3.1	Significance and variability of the reliability of water supply . . . . .	389
16.3.2	The relationship of reliability indices and economic factors . . . . .	392
16.3.3	Relationship between the respective reliability indices . . . . .	393
16.3.4	Reliability of water supply in various branches of water management . . . . .	399
16.3.5	Relationship between flood characteristics and economic losses. . . . .	404
17	Reservoirs and the environment . . . . .	406
17.1	Consequences for the human environment of the construction of reservoirs . . . . .	407
17.1.1	Physical impacts of reservoirs on the environment . . . . .	409
17.1.2	Biological and chemical impacts of reservoirs on the environment . . . . .	416
17.1.3	Impact of reservoirs construction on man . . . . .	422
17.2	Reservoirs as an important element of environmental policy . . . . .	424
	Bibliography . . . . .	427
	Index . . . . .	439
