THE DESIGN AND CONSTRUCTION OF ENGINEERING FOUNDATIONS

EDITED BY

The late F.D.C. Henry

*BSc (Eng), PhD, FICE, FAmSocCE
FIStructE, FIMunE, FGS*

SECOND EDITION

London New York

CHAPMAN AND HALL

CONTENTS

<i>Contributors</i>	xvii
<i>Preface</i>	xix
1 Site investigations and preliminary considerations	1
F.D.C. Henry	
Introduction	1
1.1 Geological considerations	3
1.1.1 <i>Chemical and physical stability of rocks</i>	3
1.1.2 <i>Structural geology in relation to engineering</i>	7
1.1.3 <i>Considerations relating to sedimentary rocks and stratigraphy</i>	18
1.1.4 <i>Rock mechanics</i>	29
1.2 Site investigations	37
1.2.1 <i>Field operations in site investigations</i>	39
1.2.2 <i>Description and classification of rocks and soils</i>	48
1.2.3 <i>Site investigation plans and maps</i>	65
1.2.4 <i>Site plate bearing tests</i>	69
1.2.5 <i>Field vane tests</i>	78
1.2.6 <i>Penetration or sounding tests</i>	80
1.2.7 <i>Pore-water pressure measurement</i>	82
1.2.8 <i>Pressuremeters</i>	83
1.3 Potentially corrosive environments for foundation materials	85
1.4 Special problems relating to particular site conditions	90
1.4.1 <i>Foundations on limestone</i>	90
1.4.2 <i>Collapsing and aggregated soils</i>	98
1.4.3 <i>Foundations on permafrost</i>	101
1.4.4 <i>Foundations on fill</i>	104
1.4.5 <i>Foundations on clays</i>	114
1.4.6 <i>Structures in the open sea</i>	119
1.5 Selection of foundation types	123
1.5.1 <i>Site conditions</i>	124
1.5.2 <i>Characteristics of superstructure</i>	124
1.5.3 <i>Methods of excavation and construction</i>	130
1.5.4 <i>Example of the selection of foundation types</i>	131
1.6 Philosophical observations on foundation engineering	132

2 Deformation and groundwater problems in foundation engineering	141
F.D.C. Henry	
Introduction	141
2.1 Deformation characteristics of soils and rocks	142
2.2 Stresses in soils	147
2.2.1 Stresses beneath a point load	147
2.2.2 Calculation of stresses beneath distributed loads	150
2.2.3 Stress bulbs	151
2.3 Distribution of bearing stress	156
2.3.1 Observed and theoretical distributions of bearing stress	156
2.3.2 Linear distributions of bearing stress	161
2.4 Settlement of foundations on cohesive soils	165
2.4.1 Review of the problem of settlement and related laboratory tests	165
2.4.2 Immediate settlement	171
2.4.3 Consolidation settlement	177
2.4.4 Secondary settlement	181
2.4.5 Settlement progression	181
2.5 Settlement of foundations on cohesionless soils	203
2.5.1 The use of plate bearing tests for predicting settlement	203
2.5.2 The use of penetration tests for predicting settlement	204
2.6 The effect of settlement on superstructures	208
2.6.1 The general effects of settlement on superstructures	208
2.6.2 Classification of settlement effects	211
2.6.3 Methods of reducing differential settlement	213
2.6.4 Observations of settlement	214
2.7 Flow of water to excavations and boreholes	215
2.7.1 Permeability	215
2.7.2 Flow nets	218
2.7.3 Stability of the floor of an excavation under the influence of hydrodynamic pressure	220
2.7.4 Calculation of discharge of water to excavations and boreholes	227
3 Stability problems in foundation engineering	246
F.D.C. Henry	
Introduction	246
3.1 Failure characteristics of soils and rocks	247
3.1.1 General observations concerning failure of soils and rocks	247
3.1.2 Failure in cohesionless soils	250
3.1.3 Failure in cohesive soils	252
3.1.4 Anisotropy	254
3.1.5 Sensitivity	254
3.1.6 Organic content	257
3.1.7 Specimen size	257

3.1.8 Rate of shearing	258
3.1.9 Progressive failure	258
3.1.10 Variation of shear strength with depth	259
3.1.11 Further discussion of the properties of stiff fissured clays	261
3.2 Analysis of the stability of hillsides and banks	264
3.2.1 The classification of failures in hillsides and banks of cohesive soils	264
3.2.2 Stability analyses	268
3.2.3 Assessment of the stability of slopes by stability number and stability coefficients	276
3.2.4 Stability of banks of cohesionless soil	280
3.2.5 The application of analytical techniques to the solution of practical problems	280
3.2.6 Preventative and remedial measures	284
3.3 Bearing capacity of soils	287
3.3.1 Characteristics of bearing failure of soils	287
3.3.2 Estimation of bearing capacity based on the rupture zone hypothesis	291
3.3.3 Bearing capacity of square and rectangular foundations	297
3.3.4 Bearing capacity of eccentrically loaded foundations	298
3.3.5 Bearing capacity of foundations subjected to inclined loads	300
3.3.6 The influence of groundwater on bearing capacity	300
3.3.7 Additional comments on bearing capacity	303
3.3.8 The bearing capacity of cohesive soil in the undrained state beneath an embankment	305
3.4 Local overstressing beneath foundations and the bearing capacity of foundations on a thin layer of cohesive soil	315
3.4.1 Overstressing in a thick bed of cohesive soil	315
3.4.2 The bearing capacity of a foundation on a thin layer of cohesive soil	317
3.5 The design of bored piers and piles	320
3.6 Bearing capacity of rock	328
3.7 The investigation of failures	330
3.7.1 Failure of banks and hillsides	331
3.7.2 Failure of retaining walls	331
3.7.3 Bearing failures beneath foundations	336
4 Independent foundations	343
A.W. Astill	
4.1 General notes	343
4.2 Transfer of load from column to footing	344
4.2.1 Reinforced concrete columns	344
4.2.2 Steel columns	345
4.3 Transfer of load from footing to soil	352

4.3.1	General details	352
4.3.2	Eccentricity about one axis	353
4.3.3	Footings loaded eccentrically in two directions	355
4.4	Design of reinforced concrete column footings	356
4.4.1	Axial loading	356
4.4.2	Eccentric loading	361
4.5	Plain concrete foundation blocks	368
4.6	Steel grillage design	370
4.6.1	Concrete encased grillages	370
4.6.2	Uncased grillages	371
4.6.3	Grillage loaded axially	372
4.6.4	Grillages loaded eccentrically along one axis	377
4.7	Construction of footings	377
4.7.1	General notes	377
4.7.2	Reinforced concrete	378
4.7.3	Steel grillages	378
4.8	Cantilever foundations	379
4.9	Steel column bases	380
4.9.1	General notes	380
4.9.2	Gusseted bases	381
4.9.3	Slab bases	382
4.10	Steel pedestal bases	385
4.11	Deep foundations	386
4.12	Foundations subjected to overturning moments and uplift	387
4.13	Machine foundations	392
4.13.1	General notes	392
4.13.2	Criteria for design	392
4.13.3	The reduction of vibration emanating from machine foundations	394
4.13.4	Theory of vibrations	397
4.13.5	Analysis of oscillating systems	399
5	Combined foundations	405
	A.P.S. Selvadurai	
	Introduction	405
5.1	General considerations in the analysis of stability and settlement of combined foundations	406
5.1.1	Bearing capacity	408
5.1.2	Settlement	409
5.2	Idealized soil response for the interaction analysis of combined foundations	410
5.2.1	The Winkler model	411
5.2.2	The elastic solid model	412
5.2.3	Two-parameter models	413

5.2.4	Inelastic and time-dependent soil models	419
5.2.5	Determination of constants describing the elastic soil models	421
5.3	Continuous footings	425
5.3.1	Analysis of infinitely long beams	426
5.3.2	Three-dimensional effects in the infinite beam problem	431
5.3.3	Analysis of finite beams	435
5.3.4	Finite beams on a Winkler medium	437
5.3.5	Finite beams on a two-parameter elastic medium	451
5.3.6	Finite beams on an elastic solid medium	455
5.3.7	Design of continuous footings	462
5.4	Mat and raft foundations	468
5.4.1	Plate theories	470
5.4.2	The analysis of the infinite plate	473
5.4.3	The analysis of finite plates	476
5.4.4	Design of mat foundations	480
5.4.5	Design of raft foundations	483
5.5	Tank foundations	495
6	Earth retaining structures and culverts	502
	K. Starzewski	
	Introduction	502
6.1	Evaluation of loads on earth retaining structures	502
6.1.1	The of stress 'at rest' and the concept of 'active' and 'passive' states of limiting equilibrium	503
6.1.2	Methods of evaluating loads on earth retaining structures due to the self weight of soil	506
6.1.3	Effects of movement and deformation of retaining structures on total thrust and stress distribution	517
6.1.4	Pore-water pressure and seepage effects (hydrostatic and hydrodynamic pressures)	524
6.1.5	Effects of surcharge loads	529
6.1.6	Influence of special effects	532
6.1.7	Physical and mechanical properties of soils	534
6.2	Design and construction of retaining walls	536
6.2.1	Stability and serviceability considerations	537
6.2.2	Mass (gravity) retaining walls	542
6.2.3	Reinforced concrete cantilever walls	543
6.2.4	Reinforced concrete counterfort walls	547
6.2.5	Reinforced concrete and mass retaining walls with relieving slabs	548
6.2.6	Precast reinforced concrete walls	553
6.2.7	Strutted excavations	557
6.2.8	Cantilever and anchored sheet pile walls	561

6.3 Lateral stresses on the lining of shafts	577
6.4 Design and construction of culverts	577
6.4.1 Determination of loads on culverts	578
6.4.2 Design of box section culverts	583
7 Cofferdams and caissons	584
I. Greeves	
Introduction	584
7.1 General review of the type of foundation to be used in bad ground or underwater	584
7.1.1 Preliminary investigation	584
7.1.2 Choice of foundation	584
7.1.3 Cofferdams	585
7.1.4 Caissons	585
7.1.5 Cylinders	586
7.1.6 Monoliths	586
7.2 Types of cofferdam	586
7.2.1 Gravity types	587
7.2.2 Sheeted cofferdams	588
7.2.3 Cofferdams of rock-filled cribs	589
7.2.4 Cellular cofferdams	590
7.2.5 Construction of cofferdams	591
7.2.6 Work carried out in tidal waters	592
7.3 Design of cofferdams	592
7.3.1 General design considerations for cofferdams	592
7.3.2 Cofferdam of one row of sheeting internally braced	593
7.3.3 Circular cofferdams	595
7.3.4 Worked example of cofferdam of double row of sheeting	596
7.3.5 Cofferdam of double row of sheeting with filling (Fig. 7.20)	615
7.3.6 Cellular cofferdams	617
7.4 Sheet piles	623
7.4.1 Driving of sheet piles	623
7.4.2 Water jetting	626
7.4.3 Cofferdam closure	626
7.4.4 Circular cofferdams	627
7.4.5 Extraction of piles	627
7.4.6 Cutting sheet steel piles	628
7.4.7 Silent pile driving	629
7.5 Open and pneumatic caissons	629
7.6 Construction of cylinders, etc.	633
7.6.1 Cylinders on land	633
7.6.2 Cylinder sinking by well sinking methods	634
7.6.3 Cylinder sinking over water	634

7.6.4 Sealing of caissons	638
7.6.5 Buoyant foundations	641
7.6.6 The construction of monoliths	641
7.6.7 The diving bell	643
7.7 Underwater concreting	644
7.7.1 Concrete	644
7.7.2 Preparation to receive concrete	644
7.7.3 Reinforcement	645
7.7.4 Methods of placing concrete	645
7.7.5 Use of the diving bell for underwater concreting	647
7.8 The use of compressed air in excavation work	648
7.8.1 The effects of compression upon workmen	649
7.8.2 Use of compressed air plant in relation to ground conditions and safety	650
8 Bearing piles and piling	652
I.A. Rennie	
Introduction	652
8.1 Types of pile	653
8.2 Displacement piles	657
8.2.1 Timber piles	657
8.2.2 Precast concrete piles	658
8.2.3 Prestressed concrete piles	664
8.2.4 Driven cast in place piles	665
8.2.5 Steel bearing piles	672
8.2.6 Driving plant and hammers	676
8.2.7 Pile driving by vibration	678
8.3 Replacement piles	679
8.3.1 Hand augered piles	679
8.3.2 Percussive bored piles	679
8.3.3 Auger bored piles	682
8.4 Bearing capacity and settlement of piles and pile groups	687
8.4.1 Bearing capacity of single piles	687
8.4.2 Dynamic methods of calculating bearing capacity using driving equations	687
8.4.3 Static methods of calculating bearing capacity	692
8.4.4 Settlement of single piles	711
8.4.5 Bearing capacity of pile groups	713
8.4.6 Laterally loaded piles and pile groups	718
8.4.7 Piles in fill and soft soils	720
8.5 Pile caps	722
8.6 Pile testing	727
8.6.1 Functions of a pile test	727

8.6.2 Methods of test loading	728
8.6.3 Methods of measuring vertical displacement	729
8.6.4 Testing procedure	730
8.6.5 Interpretation of results	733
8.6.6. Lateral load and vertical pulling pile tests	734
8.6.7 Non-destructive pile testing	734
8.7 Safety precautions	738
9 Structures liable to the effects of mining subsidence	739
G.S. Littlejohn	
Introduction	739
9.1 Mechanics of mining subsidence	740
9.1.1 History	740
9.1.2 Mining Methods	741
9.1.3 The subsidence diagram	742
9.1.4 Angle of draw	742
9.1.5 Critical area of extraction (area of influence)	743
9.1.6 Seam thickness (<i>t</i>)	744
9.1.7 Width of working (<i>W</i>)	744
9.1.8 Stowage	745
9.1.9 Depth of working (<i>D</i>)	746
9.1.10 Width/depth ratio (<i>W/D</i>)	746
9.1.11 Geology of the overburden	747
9.1.12 Old coal workings	748
9.1.13 Presence of faults	748
9.1.14 Estimation of subsidence	748
9.1.15 Strains and displacements	751
9.1.16 Travelling or dynamic movements	755
9.1.17 Slope	757
9.1.18 Inclined seams	757
9.1.19 The time factor	759
9.1.20 Conclusions	763
9.2 Surface damage	764
9.2.1 General aspects	764
9.2.2 Vertical settlements	765
9.2.3 Horizontal displacements	769
9.3 Mining precautions against the effects of subsidence	771
9.3.1 Sterilization	771
9.3.2 Harmonious mining	772
9.3.3 Stowing	775
9.4 Structural precautions against the effects of subsidence	776
9.4.1 Design for vertical movements	776
9.4.2 Design for horizontal displacements	787

9.4.3 Constructional considerations	800
9.5 Monitoring foundation movements	811
9.5.1 Layout of monitoring stations	812
9.5.2 Field measurements	813
9.6 General conclusions	817
10 Bridge abutments and piers	821
W.J. Walley and J.A. Purkiss	
Introduction	821
10.1 Preliminary considerations	821
10.1.1 General considerations	821
10.1.2 Special considerations relating to river bridges	822
10.1.3 Special considerations relating to land bridges	823
10.1.4 Aesthetic considerations	825
10.2 Scour at river bridges	827
10.3 Standard bridge loading	830
10.3.1 Forces common to all bridges	833
10.3.2 Highway bridge live loading	838
10.3.3 Footway and cycle track live loading	840
10.3.4 Railway bridge live loading	841
10.4 Abutments for simply supported bridge decks	843
10.4.1 General considerations	843
10.4.2 Mass concrete, brick and masonry abutments	847
10.4.3 Reinforced concrete cantilever abutments	847
10.4.4 Reinforced concrete counterfort abutments	849
10.4.5 Reinforced concrete strutted abutments	849
10.4.6 Reinforced concrete U-shaped and T-shaped abutments	850
10.4.7 Skeleton abutments and bank seats	852
10.4.8 Counterbalanced and cellular abutments	853
10.5 Abutments for portal frame and arch bridges	854
10.5.1 General considerations	854
10.5.2 Portal frame abutments	855
10.5.3 Arch abutments	855
10.6 Bridge piers	858
10.6.1 Types of piers	858
10.6.2 Design considerations	859
10.7 Abutments and piers for moveable bridges	863
10.8 Bridge bearings and articulation systems	866
10.8.1 Introduction	866
10.8.2 Bearing design and performance	869
10.9 Design example. Calculation of design moments and forces for a cantilever abutment	875
10.9.1 Basic specification	875
10.9.2 Loading (characteristic forces per metre width of abutment)	875

10.9.3	Choice of overall proportions	876
10.9.4	Adequacy of foundation	877
10.9.5	Determination of design moments and forces	878
10.9.6	Summary of design moments and shears	883
11	Miscellaneous foundation problems	885
	K. Elson and D.A. Greenwood	
	Introduction	885
11.1	De-watering	885
11.2	Drainage and preloading	889
11.3	Deep ground improvement by vibration and tamping	890
11.3.1	Vibratory systems	891
11.3.2	Soils responsive to vibratory compaction	895
11.3.3	Arrangement of vibratory compactions	897
11.3.4	Earthquake resistance	899
11.3.5	Design of gravel columns and sand piles in cohesive soils	899
11.3.6	Application in heterogeneous strata	907
11.3.7	Practical constraints	907
11.3.8	Quality control	908
11.3.9	Deep compaction by heavy tamping	909
11.3.10	Vibration nuisance and damage to structures	915
11.4	Grouting in geotechnics	916
11.4.1	Injection constraints	918
11.4.2	Site investigation	918
11.4.3	Technique of repetition	919
11.4.4	Grout holes and stages	921
11.4.5	Hydrofracture and permeation techniques	923
11.4.6	Effects of consolidation ('bleed') of particulate grouts	926
11.4.7	Filtration	926
11.4.8	Permeation with chemical grouts	927
11.4.9	Permeation limits	929
11.4.10	Hydrofracture	929
11.4.11	Squeeze grouting	931
11.4.12	Examples of grouting techniques	931
11.4.13	Hydraulic displacement after injection	933
11.4.14	Permanence of grout treatment	934
11.4.15	Toxic hazards	935
11.4.16	Structural design with grouted soils	935
11.4.17	Quality control tests	936
11.4.18	Grouting equipment	937
11.4.19	Mix-in-place methods	939
11.4.20	Grouting contract philosophy	940
11.5	Diaphragm walls	940
11.6	Ground anchors	946

11.6.1	Anchor design	947
11.6.2	Other design considerations	949
11.7	Pressure of concrete on formwork	950
11.8	General review of underpinning	956
11.8.1	Underpinning methods	964
11.8.2	Examples of underpinning	967
11.8.3	Moving complete structures	970
Appendix	The structural analysis of pile groups	973
	F.D.C. Henry	
A. 1	Graphical analysis of pile groups	974
A.1.1	Hinged-ended piles	975
A.1.2	Fixed-ended piles	977
A. 2	Numerical analysis of pile groups	980
A.2.1	Bending stiffness neglected	982
A.2.2	Bending stiffness included	985
	References	990
