CONTENTS

PART ONE—THEORY

1. Groundwater in Construction	1
1.1 Groundwater in the Hydrologic Cycle	1
1.2 Origins of Dewatering	6
1.3 Development of Modern Dewatering Technology	7
2. The Geology of Soils	12
2.1 Formation of Soils	13
2.2 Mineral Composition of Soils	14
2.3 Rivers	14
2.4 Lakes	17
2.5 Estuaries	17
2.6 Beaches	18
2.7 Wind Deposits	18
2.8 Glaciers—The Pleistocene Epoch	19
2.9 Rock	22
2.10 Limestone and Coral	24
2.11 Tectonic Movements	27
2.12 Man-Made Ground	28
3. Soils and Water	29
3.1 Soil Structure	30
3.2 Gradation of Soils	30

3.3	Porosity and Void Ratio: Water Content	35
3.4	Relative Density, Specific Gravity, and Unit Weight	36
3.5	Permeability	38
3.6	Silts and Clays	46
3.7	Unified Soil Classification System (ASTM D-2487)	48
3.8	Soil Descriptions	52
3.9	Visual and Manual Classification of Soils	53
3.10	Seepage Forces and Soil Stress	57
3.11	Gravity Drainage of Granular Soils	60
3.12	Drainage of Silts and Clays: Unsaturated Flow	62
3.13	Settlement Caused by Dewatering	65
3.14	Preconsolidation	70
3.15	Other Side Effects of Dewatering	71
4.	Hydrology of the Ideal Aquifer	72
4.1	Definition of the Ideal Aquifer	73
4.2	Transmissibility T	73
4.3	Storage Coefficient C_s	75
4.4	Pumping from a Confined Aquifer	76
4.5	Recovery Calculations	79
4.6	Definition of the Ideal Water Table Aquifer	81
4.7	Specific Capacity	82
5.	Characteristics of Natural Aquifers	87
5.1	Anisotropy: Stratified Soils	87
5.2	Horizontal Variability	91
5.3	Recharge Boundaries: Radius of Influence R_0	91
5.4	Barrier Boundaries	93
6.	Hydrological Analysis of Dewatering Systems	94
6.1	Radial Flow to a Well in a Confined Aquifer	97
6.2	Radial Flow to a Well in a Water Table Aquifer	99
6.3	Radial Flow to a Well in a Mixed Aquifer	100
6.4	Flow to a Drainage Trench from a Line Source	101
6.5	The System as a Well: Equivalent Radius r_s	102
6.6	Radius of Influence R_0	103
6.7	Permeability K and Transmissibility T	105
6.8	Initial Head H and Final Head h	105

6.9	Partial Penetration	106
6.10	Storage Depletion	107
6.11	Specific Capacity of the Aquifer	111
6.12	Cumulative Drawdown or Superposition	112
6.13	Capacity of the Well Q_w	114
6.14	Flow Net Analysis: Fragment Analysis	118
6.15	Concentric Dewatering Systems	120
6.16	Vertical Flow	122
7.	Groundwater Modeling	125
7.1	Analytic versus Numerical Solutions	126
7.2	Defining the Problem to be Modeled	128
7.3	Selecting the Program	129
7.4	Selecting the Hardware	130
7.5	Verification	130
7.6	Calibration	131
7.7	2D Models: Well System in a Water Table Aquifer	131
7.8	Calibrating the Model of Fig. 7.5	134
7.9	3D Models: Partial Penetration	137
7.10	3D Models: Vertical Flow	139
8.	Piezometers	142
8.1	Soil Conditions	142
8.2	Ordinary Piezometers and True Piezometers	143
8.3	Piezometer Construction	145
8.4	Proving Piezometers	147
8.5	Reading Piezometers	148
8.6	Data Loggers	149
8.7	Pore Pressure Piezometers	151
9.	Pumping Tests	153
9.1	Planning the Test	154
9.2	Design of the Pumping Well	154
9.3	Piezometer Array	156
9.4	Duration of Pumpdown and Recovery	156
9.5	Pumping Rate	158
9.6	Nature and Frequency of Observations	159
9.7	Analysis of Pump Test Data	159

9.8	Tidal Corrections	165
9.9	Well Loss	169
9.10	Step Drawdown Tests	172
9.11	Testing Low Yield Wells	174
9.12	Delayed Storage Release: Boulton Analysis	175
10.	Surface Hydrology	177
10.1	Lakes and Reservoirs	178
10.2	Bays and Ocean Beaches	178
10.3	Rivers	178
10.4	Precipitation	184
10.5	Disposal of Dewatering Discharge	186
10.6	Water from Existing Structures	187
11.	Geotechnical Investigation of Dewatering Problems	189
11.1	Preliminary Studies	190
11.2	Borings	191
11.3	Piezometers and Observation Wells	193
11.4	Borehole Testing: Slug Tests	194
11.5	Laboratory Analysis of Samples	196
11.6	Geophysical Methods	196
11.7	Permanent Effects of Structures on the Groundwater Body	197
11.8	Investigation of Potential Side Effects of Dewatering	199
11.9	Pumping Tests	201
11.10	Presentation in the Bidding Documents	202
12.	Pump Theory	203
12.1	Types of Pumps Used in Dewatering	204
12.2	Total Dynamic Head	209
12.3	Pump Performance Curves	211
12.4	Affinity Laws	212
12.5	Cavitation and NPSH	215
12.6	Engine Power	216
12.7	Electric Power	217
12.8	Vacuum Pumps	218
12.9	Air Lift Pumping	220
12.10	Testing of Pumps	222

13. Groundwater Chemistry and Bacteriology	223
13.1 Carbon Dioxide	224
13.2 Hydrogen Sulfide	224
13.3 Chlorides	224
13.4 Miscellaneous Salts	225
13.5 Iron and Manganese	225
13.6 Carbonates and Bicarbonates: Hardness	226
13.7 Dissolved Oxygen	227
13.8 Algae	227
13.9 Designing for Corrosive Waters	227
13.10 Designing for Encrustation	229
13.11 Acidization	229
13.12 Chemical Analysis	233
14. Contaminated Groundwater	235
14.1 Contaminants Frequently Encountered	236
14.2 Design Options at a Contaminated Site	236
14.3 Dewater and Treat	237
14.4 Estimating Water Quantity to Be Treated	238
14.5 Recovery of Contaminated Water	238
14.6 Dynamic Barriers	239
14.7 ReInjection	241
14.8 Safety	241
14.9 Regulating Authorities	241
15. Piping Systems	242
15.1 Dewatering Pipe and Fittings	242
15.2 Losses in Discharge Piping	245
15.3 Losses in Wellpoint Header Lines	249
15.4 Losses in Ejector Headers	251
15.5 Water Hammer	251

PART TWO—PRACTICE

16. Choosing a Dewatering Method	253
16.1 Open Pumping versus Predrainage	254
16.2 Methods of Predrainage	254

16.3	Methods of Cutoff and Exclusion	262
16.4	Methods in Combination	263
16.5	Summary	265
17.	Sumps, Drains, and Open Pumping	266
17.1	Soil and Water Conditions	266
17.2	Boils and Blows	268
17.3	Construction of Sumps	268
17.4	Ditches and Drains	270
17.5	Gravel Bedding	272
17.6	Slope Stabilization with Sandbags, Gravel, and Geotextiles	272
17.7	Use of Geotextiles	274
17.8	Soldier Piles and Lagging: Standup Time	274
17.9	Long-Term Effect of Buried Drains	278
18.	Pumped Well Systems	279
18.1	Testing during Well Construction	279
18.2	Well Construction Methods	280
18.3	Wellscreen and Casing	288
18.4	Filter Packs	295
18.5	Development of Wells	303
18.6	Well Construction Details	305
18.7	Pressure Relief Wells: Vacuum Wells	308
18.8	Wells That Pump Sand	309
18.9	Systems of Low-Capacity Wells	311
19.	Wellpoint Systems	312
19.1	Suction Lifts	313
19.2	Single and Multistage Systems	315
19.3	Wellpoint Design	317
19.4	Wellpoint Spacing	319
19.5	Wellpoint Depth	321
19.6	Installation of Wellpoints	321
19.7	Filter Sands	324
19.8	Wellpoint Pumps, Header and Discharge Piping	325
19.9	Tuning Wellpoint Systems	328
19.10	Air/Water Separation	330
19.11	Automatic Mops	331

19.12	Vertical Wellpoint Pumps	331
19.13	Wellpoints for Stabilization of Fine-Grained Soils	336
20.	Ejector Systems	338
20.1	Two Pipe and Single Pipe Ejectors	338
20.2	Ejector Pumping Stations	341
20.3	Ejector Efficiency	343
20.4	Design of Nozzles and Venturis	344
20.5	Ejector Risers and Swings	348
20.6	Ejector Headers	349
20.7	Ejector Installation	349
20.8	Ejectors and Groundwater Quality	349
20.9	Ejectors and Soil Stabilization	350
21.	Methods of Cutoff and Exclusion: Tunnels	351
21.1	Steel Sheet Piling	351
21.2	Slurry Diaphragm Walls	358
21.3	Secant Piles	361
21.4	Slurry Trenches	361
21.5	Tremie Seals	365
21.6	Grouting	366
21.7	Tunnel Dewatering: Compressed Air	369
21.8	Tunnels: Earth Pressure Shields	373
22.	Ground Freezing (With Derek Maishman)	374
22.1	General Principles	375
22.2	Freezing Equipment and Methods	376
22.3	Freezing Applications	378
22.4	Effect of Groundwater Movement	382
22.5	Frost Heave	383
22.6	Case Histories	385
23.	Artificial Recharge	388
23.1	Recharge Applications	389
23.2	Quantifying the Desired Result: Supplemental Measures	389
23.3	Hydrogeologic Analysis of Recharge Systems	390
23.4	Recharge Trenches	390
23.5	Recharge Wells	392

23.6	Recharge Wellpoint Systems	394
23.7	Problems with Recharge Water	394
23.8	Sources of Recharge Water	394
23.9	Permits for Recharge Operations	395
23.10	Treatment of Recharge Water	395
23.11	Recharge Piping Systems	396
23.12	Operation of Recharge Systems	398
24.	Electrical Design for Dewatering Systems	399
24.1	Electrical Motors	399
24.2	Motor Controls	409
24.3	Power Factor	415
24.4	Electric Generators	416
24.5	Switchgear and Distribution Systems	419
24.6	Grounding of Electrical Circuits	423
24.7	Cost of Electrical Energy	424
25.	Long-Term Dewatering Systems	426
25.1	Types of Long-Term Systems	426
25.2	Pumps	427
25.3	Wellscreens and Wellpoint Screens	428
25.4	Pipe and Fittings	428
25.5	Groundwater Chemistry and Bacteriology	429
25.6	Access for Maintenance	429
25.7	Instrumentation and Controls	431
26.	Dewatering Costs	433
26.1	Format of the Estimate	434
26.2	Basic Cost Data	435
26.3	Mobilization	436
26.4	Installation and Removal	437
26.5	Operation and Maintenance	437
26.6	Summary	438
27.	Dewatering Specifications: Disputes	441
27.1	Specified Results	442
27.2	Owner Designed Dewatering Systems	444
27.3	Specified Minimum Systems	445

27.4	Dewatering Submittals	445
27.5	Third Party Damage Caused by Dewatering	446
27.6	Changed Conditions Clause	448
27.7	Disputes Review Board	449
27.8	Geotechnical Design Summary Report	449
27.9	Escrow Bid Documents	450
