CONTENTS

Introduction	xix
1 Evolution of Infrastructure Management: Modern Automation for the Sewer Systems	1
1.1 The Hidden Resource: The Infrastructure	1
1.2 What Makes an Infrastructure Unique?	2
1.3 The Beginnings of the Role of Government in Management of Utilities	3
1.4 Issues with Infrastructure Management by Government	4
1.5 Infrastructure and the Water Utility	5
1.6 The Need for More Information	6
1.7 The Development of Sewer Infrastructure Management Concepts	8
1.8 Theory and Practice of Infrastructure Management Concepts	10
1.9 Merging the Factions for the Common Good	15
1.10 The Initial Stages of Sewer Infrastructure Management	17
1.11 Summary	18
2 Basic Instrumentation and Fundamental Flow Measurement	19
2.1 An Overview of Instrumentation	19
2.2 Introduction to Infrastructure Instrumentation	20

2.3	Infrastructure Instrumentation: The Hardware and Software	26
2.4	The Measurement of Flow and Its Relation to Precipitation	28
2.5	Rainfall Measurement: Rain Gauges	29
2.6	Level Measurement: Pressure	32
2.7	Level Measurement: Ultrasonic	37
2.8	Level Measurement: Bubblers	42
2.9	The Measurement of the Quantity of Flow	43
2.10	Flow Measurement: Primary Elements	44
2.11	Flow Measurement: Propeller Meters	48
2.12	Flow Measurement: Point Velocity	49
2.13	Flow Measurement: Transit Time	51
2.14	Flow Measurement: Area Velocity Doppler	56
2.15	Flow Measurement: Full-Pipe Primary Meters	62
2.16	Velocity Measurement: Handheld Probes	64
2.17	Water Quality Measurement: Reference Samplers	65
2.18	Summary	67
3	System Layout: Choosing the Points of Interest	68
3.1	The Critical Path	68
3.2	Intuitive System Knowledge	70
3.3	Obtaining Intuitive Information	71
3.4	The Needs of the Utility Engineering Division	73
3.5	The Needs of the Operations and Maintenance Units	76
3.6	Content of a System Point of Interest	78
3.7	System Point of Interest: A Site	79
3.8	Bringing the System Together	80
3.9	Site Visits	81
3.10	Support Information	82
3.11	Summary	82

4 System Definition: Components of a Sewer Infrastructure	84
4.1 Introduction and Methodology	84
4.2 Flow	84
4.3 Velocity: An Attribute of Flow	87
4.4 Level	88
4.5 Cross-Sectional Area	89
4.6 The Continuity Equation	90
4.7 Structures	91
4.8 Receiving Area	92
4.9 Storm Sewer System	93
4.10 Sanitary Sewer Systems	97
4.11 Combined Sewer Systems	101
4.12 Hydraulic Control Points	107
4.13 Dams	108
4.14 Weirs	110
4.15 Flumes	112
4.16 Tanks or Storage	114
4.17 Deep Tunnels	117
4.18 Pretreatment Facilities	118
4.19 Summary	119
5 Hydrology and Climatic Effects on Infrastructures and Systems	120
5.1 Introduction	120
5.2 The Hydrologic Cycle	121
5.3 Understanding the Localized Hydrologic Cycle	123
5.4 Storm Events	124
5.5 Recording Weather Events: Locating Rain Gauges	126
5.6 Tides	131

5.7	Groundwater Considerations	133
5.8	The Watershed and the Localized Hydrologic Cycle	136
5.9	Temperature Effects on the Watershed	137
5.10	Other Climatic Factors	139
5.11	Point and Non-point Pollutant Loading Sources	140
5.12	Rights Groups	143
5.13	Industrial Discharges in Watershed Areas	145
5.14	Upstream and Downstream Considerations	149
5.15	Summary	151
6	Installation and Functions of the Monitoring System	153
6.1	Introduction	153
6.2	Development of an Analysis Matrix: Needs Assessment	154
6.3	Local Knowledge	161
6.4	Understanding the Grit Base	164
6.5	Lightning and Its Mitigation	167
6.6	Safety Issues with Confined Space	168
6.7	Temporary Monitoring Techniques: Sequencing	170
6.8	Temporary Monitoring Techniques: Level Sequencing	171
6.9	Installing the Temporary Level Monitors	174
6.10	Temporary Monitoring Techniques: Flow Sequencing	179
6.11	Installing the Temporary Flow Monitors	181
6.12	Mixed Sequences	190
6.13	Batteries and Solar Cells	191
6.14	Profiling the Site	192
6.15	Collecting the Data	194
6.16	Permanent Monitoring Systems: Overview	196
6.17	Evaluation for Permanent Installations	196
6.18	Partial Permanent Monitoring System	200
6.19	Full Permanent Monitoring System	204

6.20	Mounting Requirements	205
6.21	Utility Services	207
6.22	Data Communications: Overview	210
6.23	Data Communications: Tone Phone Lines	211
6.24	Data Communications: Cellular Communications	214
6.25	Data Communications: Radio Frequency (RF)	216
6.26	System Integration	218
6.27	Summary	220
7	Equipment and Service Selection	222
7.1	Introduction	222
7.2	An Overview of Technology Evaluation	225
7.3	Evaluation of Technologies: Second-Tier Considerations	227
7.4	Technology Consideration: Full-Service Providers	229
7.5	Technology Consideration: Manufacturers and Teaming Partners	231
7.6	Technology Consideration: Aftermarket Service Providers	233
7.7	Technology Consideration: Equipment Manufacturers: Targeted	235
7.8	Technology Consideration: Equipment Manufacturers: General Products	235
7.9	Compiling Results of the Consideration Process	236
7.10	Practical Evaluation of Technology: Study and Vendor Feedback	237
7.11	Practical Evaluation of Technology: Demonstration Programs	241
7.12	Practical Evaluation of Technology: Demonstration Programs Technique	243
7.13	Practical Evaluation of Technology: Site Verification	250

7.14 Practical Evaluation of Technology: Cost to Purchase/Cost to Own	254
7.15 Summary	263
8 Use and Application of the Data	265
8.1 Introduction	265
8.2 Time Slices and Recorded Intervals	266
8.3 Memory and Memory Allocation	269
8.4 Storage of the Data	270
8.5 Displaying the Data	271
8.6 Trending and Trend Identification	272
8.7 Pattern Identification for Hydraulic Response	274
8.8 Pattern Identification for Sewer Maintenance	277
8.9 Electronic Equipment Diagnosis	281
8.10 Engineering Planning	284
8.11 Tide and Tide Conditions	284
8.12 Custody Transfer	286
8.13 River Gauging Stations	288
8.14 Storm Variations and Spatial Relationships	289
8.15 Alignment with the Sewage Treatment Works	291
8.16 Tracing Illegal Discharges	292
8.17 Biomonitoring	293
8.18 Assisting the Legal Department: Defending the Public Interest	294
8.19 Computer Model Simulation	295
8.20 Tide Modeling: Data Applications Example	297
8.21 Compliance Programs	299
8.22 Temperature Studies	300
8.23 Maintenance Tracking and Predictive Maintenance	301
8.24 Summary	302

9 Enhancements to the Sewer Infrastructure Monitoring System	304
9.1 Introduction	304
9.2 Biomonitoring: Theory and Concepts	306
9.3 Biomonitoring: Direct Parameter Measurement and Sampling	307
9.4 Parameters in Biomonitoring	311
9.5 Practical Applications of Biomonitoring	315
9.6 Alert and Alarm Algorithms	316
9.7 Automatic Control	322
9.8 Computer Systems	331
9.9 Summary	334
10 Funding and Justification of Sewer Infrastructure Management Systems	338
10.1 Introduction	338
10.2 The Initial Concepts: Overview	341
10.3 The Initial Concepts: Reasons for the Program	341
10.4 The Initial Concepts: Funding the Program	343
10.5 The Initial Concepts: The Expected Benefits	345
10.6 Privatization: The Overview	347
10.7 Privatization: Classifications	348
10.8 Privatization: Operations	350
10.9 Privatization: The Future	352
10.10 The Case for Custody Transfer: Overview	353
10.11 The Case for Custody Transfer: The Mechanics	355
10.12 The Case for Custody Transfer: Estimation	360
10.13 Direct Revenue Generation: Funded Use of the Service	362

10.14 Indirect Revenue Generation: Legal Liability Support	363
10.15 Indirect Revenue Generation: Protection and Support	365
10.16 Justification of Targets and Goals: Performance Measures	367
10.17 Summary	369
Bibliography	371
Index	373
