

# THE ART OF TUNNELLING

by

KÁROLY SZÉCHY

Member of the Hungarian Academy of Sciences  
Professor of Foundation Engineering and Tunnelling  
at the  
Technical University for Civil and Communication Engineering  
Budapest

AKADÉMIAI KIADÓ · BUDAPEST 1970

## CONTENTS

### CHAPTER 1

INTRODUCTION . . . . .	19
1.1. Purposes and classification of tunnels . . . . .	21
1.11. Traffic tunnels . . . . .	22
11.11. Classification by position or alignment . . . . .	22
11.12. Classification according to purpose . . . . .	26
1.12. Transportation tunnels . . . . .	30
11.21. Hydroelectric plant tunnels . . . . .	30
11.22. Water supply tunnels . . . . .	31
11.23. Public utility tunnels . . . . .	32
11.24. Sewer tunnels . . . . .	32
11.25. Other tunnels . . . . .	33
1.13. Storage tunnels (garages, parking areas, shelters and storehouses) . . . . .	33
1.2. A brief history of tunnel construction . . . . .	36

### CHAPTER 2

PRELIMINARY STUDIES AND GENERAL DESIGN CONSIDERATIONS . . . . .	47
2.1. Preliminary studies . . . . .	47
2.11. Economic analysis . . . . .	47
2.12. Geological survey and exploration . . . . .	52
21.21. General geological survey . . . . .	55
21.22. Detailed geological site investigations prior to planning . . . . .	60
21.23. Site exploration during design . . . . .	62
21.24. In situ exploration during construction . . . . .	63
2.13. Typical geological factors and their effect on tunnelling . . . . .	64
21.31. The situation and orientation of layers to be penetrated . . . . .	64
21.32. Condition of strata to be perforated . . . . .	68
21.33. Stress, strength and deformation properties of rocks . . . . .	70
21.34. Hydrological survey . . . . .	79
21.35. Gases and rock temperatures . . . . .	84
2.14. Geological profile along the tunnel axis . . . . .	94

2.2. Factors influencing the location of the tunnel . . . . .	106
2.21. Selection of the line . . . . .	106
2.22. Selection of the longitudinal elevation and gradients . . . . .	110
2.23. Determination of the cross-section . . . . .	117
22.31. Tunnel clearance . . . . .	123
22.32. Influence of geological environment on shape of cross-section . . . . .	124
22.33. Influence of construction method on shape of cross-section . . . . .	128
22.34. Influence of tunnel lining on shape of cross-section . . . . .	128
22.35. Size of the tunnel cross-section . . . . .	129
References . . . . .	132

## CHAPTER 3

ANALYSIS OF LOADS ON TUNNELS AND UNDERGROUND  
STRUCTURES . . . . .

3.1. Causes and types of rock pressure . . . . .	133
3.11. Rock pressure due to loosening . . . . .	136
3.12. Genuine mountain pressure . . . . .	148
3.13. Swelling pressure . . . . .	156
3.14. Factors affecting the magnitude and local types of rock pressure . . . . .	157
3.2. Determination of vertical rock pressures. Rock pressure theories . . . . .	159
3.21. Estimates and approximate methods based on the extent of upbreak . . . . .	159
3.22. Theories based on theoretical stress conditions in the rock mass . . . . .	166
32.21. Theory of elasticity and estimation of stresses . . . . .	167
32.22. Results of investigations by Fenner . . . . .	171
32.23. Stress conditions around circular and elliptical cavities . . . . .	183
3.23. Theories based on various displacement and equilibrium assumptions . . . . .	191
32.31. Theories taking into account the effect of depth . . . . .	191
32.32. Theories neglecting the effect of depth . . . . .	208
3.3. Determination of lateral pressures on tunnels . . . . .	219
3.31. Approximate determination of lateral pressures . . . . .	219
3.32. Exact determination of lateral pressures . . . . .	221
3.33. Experimental determination and in situ measurement of lateral pressures .	221
3.4. Bottom pressures . . . . .	223
3.41. Determination of bottom pressure according to Tsimbaryevitch . . . . .	225
3.42. Determination of bottom pressure according to Terzaghi . . . . .	227
3.5. Development and superposition of rock pressures . . . . .	230
3.51. Development of rock pressure during excavation . . . . .	230
3.52. Superposition and interaction of roof loads above adjacent tunnels . . . . .	234
3.53. Loads on rock-pillars . . . . .	238
35.31. Protodyakonov's theory . . . . .	239
35.32. Tsimbaryevitch's theory . . . . .	240

3.6. Critical treatment of rock pressure theories and in situ rock pressure measurements	241
3.61. Measurements on the rock face . . . . .	243
3.62. Measurements in the interior of the rock . . . . .	245
3.63. Measurements on tunnel supports . . . . .	246
3.64. Measurement of pressure changes in completed linings . . . . .	248
3.65. Determination of pressures by model tests . . . . .	255
3.66. Main types of pressure measuring instruments . . . . .	256
3.7. Water pressure . . . . .	259
3.8. Live loads . . . . .	262
3.81. Internal loads . . . . .	262
3.82. Surface loads . . . . .	263
References . . . . .	263

## CHAPTER 4

DESIGN OF TUNNEL SECTIONS . . . . .	264
4.1. Design loads . . . . .	267
4.11. Estimated design loads for deep tunnels in solid ground . . . . .	267
4.12. Estimated design loads for shallow tunnels in loose, saturated soil . . . . .	269
4.13. Excerpts from the specifications for the design loads of the Lisbon subway . . . . .	270
4.14. Excerpts from the specifications for the design loads of the Budapest subway . . . . .	272
4.15. Soviet standard specifications for the design of underground and motorway tunnels . . . . .	277
4.2. Design of horseshoe-shaped tunnels . . . . .	281
4.21. Design by members . . . . .	281
42.11. Graphic investigation (Kommerell) . . . . .	282
42.12. Analytical design by members . . . . .	291
42.13. Common deformations and composite action of the surrounding ground (Davidov's method) . . . . .	316
4.22. Analytical design method treating the section as a whole and considering composite action of the ground . . . . .	321
42.21. Method of Zurabov and Bougayeva . . . . .	321
42.22. Numerical example of the Zurabov—Bougayeva method . . . . .	326
4.3. Design of circular tunnel sections . . . . .	341
4.31. Graphical investigation . . . . .	341
4.32. Approximate method for the calculation of ring sections . . . . .	342
43.21. Design by dividing the section into segments . . . . .	342
43.22. Design of a monolithic ring section . . . . .	343
43.23. The Hewett—Johannesson method . . . . .	356
4.33. The design of circular tunnels as sections elastically embedded in the subsoil	365
43.31. The method of Bodrov—Gorelik . . . . .	365
43.32. The polygonal method . . . . .	378
43.33. Bougayeva's method . . . . .	396
43.34. Davidov's method . . . . .	405

43.35. Varga's development . . . . .	408
43.36. Meissner's and Orlov's methods . . . . .	410
<b>4.34. Design of tunnels with double lining . . . . .</b>	<b>412</b>
43.41. Soviet specifications (based on Galerkin's theory) . . . . .	412
43.42. Design with steel plate lining (design after Mühlhofer) . . . . .	415
43.43. Design of tunnels with laminated linings . . . . .	418
43.44. Design of laminated linings for non-radial (external) loads . . . . .	420
<b>4.4. Design of culverts and conduits . . . . .</b>	<b>423</b>
4.41. Design of circular culverts . . . . .	424
44.11. Determination of vertical earth pressure (according to Yaroshenko) .	424
44.12. Determination of traffic loads . . . . .	433
44.13. Effect of the bedding . . . . .	434
44.14. Cross-sectional design of culvert sections . . . . .	435
44.15. Longitudinal design of culverts . . . . .	438
4.42. Design of circular conduits . . . . .	442
4.43. The semi-graphical design of egg-shaped culverts . . . . .	444
4.44. Flexible metal culverts of corrugated steel sheets . . . . .	454
<b>4.5. Design of rectangular tunnel sections . . . . .</b>	<b>459</b>
4.51. One bay rectangular section on rigid foundations . . . . .	459
4.52. Two bay box section on elastic foundations . . . . .	462
<b>4.6. Design directives for ancillary works, services and installations . . . . .</b>	<b>480</b>
4.61. Composition and structure of tunnel walls . . . . .	480
4.62. Waterproofing of tunnels . . . . .	481
46.21. Multi-layer plastering and shotcrete . . . . .	483
46.22. Gunite plaster . . . . .	485
46.23. Bonded waterproofing . . . . .	486
46.24. Reinforced bituminous waterproofing . . . . .	487
46.25. PVC waterproofing . . . . .	487
46.26. Use of thermoplastic sheets . . . . .	489
4.63. Drainage of tunnels . . . . .	490
4.64. Protection against corrosion . . . . .	493
46.41. Problems of corrosion by soil . . . . .	493
46.42. Groundwater corrosion . . . . .	498
4.65. Tunnel ventilation . . . . .	498
46.51. Ventilation during construction . . . . .	499
46.52. Natural ventilation . . . . .	503
46.53. Mechanical ventilation . . . . .	505
4.66. Lighting, and noise control in tunnels . . . . .	519
46.61. Lighting . . . . .	519
46.62. Noise control . . . . .	520
4.67. Ancillary works . . . . .	520
46.71. Safety recesses . . . . .	521
46.72. Portals . . . . .	521
References . . . . .	523

## CHAPTER 5

TUNNEL SURVEYING . . . . .	524
5.1. Surveying from portals . . . . .	524
5.11. Horizontal layout . . . . .	524
51.11. Layout of short tunnels . . . . .	524
51.12. Layout of long tunnels . . . . .	526
5.12. Marking the stations . . . . .	532
5.13. Layout of details . . . . .	533
5.14. Methods to improve accuracy . . . . .	535
5.15. Vertical layout . . . . .	537
5.2. Layout of tunnels starting underground . . . . .	538
5.21. Horizontal layout . . . . .	538
52.11. Surface reference net . . . . .	539
52.12. Transfer of directions down shafts . . . . .	544
52.13. Underground directional layout . . . . .	556
52.14. Possibilities for increasing the accuracy of the layout . . . . .	559
5.22. Vertical layout . . . . .	559
5.23. Layout of ring sections (segments) and shields . . . . .	561
52.31. Layout of segments . . . . .	561
52.32. Determining the position of the shield . . . . .	564
References . . . . .	566

## CHAPTER 6

CONSTRUCTION AND DESIGN OF TUNNELS . . . . .	568
6.1. Tunnelling in solid rocks . . . . .	569
6.11. Means of excavation in solid rocks . . . . .	569
61.11. Mechanical drilling and cutting . . . . .	569
61.12. The use of explosives and blasting technique . . . . .	571
6.12. Full-face tunnelling without supports . . . . .	581
6.13. Full-face tunnelling with supports . . . . .	584
61.31. Temporary support independent of the permanent lining . . . . .	586
6.2. Tunnelling in moderately firm rocks and ground . . . . .	609
6.21. Tunnelling by successive excavation and lining of smaller independent headings (classical or mining methods) . . . . .	609
62.11. Scope and construction of headings . . . . .	615
62.12. Vertical break-ups and pits . . . . .	629
6.22. Single-stage mining methods of tunnel construction . . . . .	630
62.21. The crown bar (English) method . . . . .	630
62.22. The cross-bar (Austrian) method . . . . .	635

62.23. The alternate ring method . . . . .	638
62.24. The centre-cut method . . . . .	638
6.23. Multiple-stage classical methods . . . . .	639
62.31. The Belgian or underpinning (flying arch) method . . . . .	639
62.32. The core-leaving or German method . . . . .	648
62.33. The Italian or invert method . . . . .	652
62.34. Combined tunnelling methods . . . . .	654
6.24. Recent tunnelling methods employing both timber and steel-supporting elements	656
62.41. Tunnelling with liner plates (the needle beam method) . . . . .	657
62.42. The full-face erector method . . . . .	658
62.43. Tunnelling with liner plates and stiffening rings . . . . .	658
62.44. The Kunz method . . . . .	664
62.45. The Cologne method . . . . .	665
6.3. Tunnelling in loose ground and under watercourses . . . . .	668
6.31. Tunnelling by sinking caissons . . . . .	673
63.11. Sinking caissons in the form of working chambers . . . . .	673
63.12. The floating caisson method . . . . .	675
6.32. Shield tunnelling . . . . .	678
63.21. Structure and dimensions of tunnel shields . . . . .	681
63.22. The main working procedures of shield tunnelling . . . . .	699
63.23. Lining segments for shield-driven tunnels . . . . .	738
63.24. Application of compressed air (the plenum process) and soil stabilization in tunnelling . . . . .	771
63.33. Special underground structures and railway stations . . . . .	783
63.31. Access or ventilation shafts . . . . .	784
63.32. Connecting drifts (ventilation ducts) . . . . .	795
63.33. Underground halls (shield chambers, power and substation rooms, etc.)	797
63.34. Underground stations and adjoining service and communication localities . . . . .	799
6.4. Urban and public utility tunnels constructed at a shallow depth . . . . .	811
6.41. Side-wall construction in wall drifts . . . . .	812
6.42. Special methods for the construction of pedestrian subways, highway and public service line underpasses . . . . .	812
64.21. Subways in Vienna . . . . .	814
64.22. Margaret bridge in Budapest . . . . .	817
64.23. Dimitrov Square subway in Budapest . . . . .	818
6.43. Construction of culverts and sewers by pipe jacking . . . . .	819
6.44. Cut and cover construction method with precast panels . . . . .	824
6.5. Safety measures and health protection in tunnelling . . . . .	828
6.51. Safety measures . . . . .	828
6.52. Health protection . . . . .	829
65.21. Silicosis . . . . .	830
65.22. Caisson disease . . . . .	831
References . . . . .	833

## CHAPTER 7

SERVICE, OPERATION AND MAINTENANCE OF TUNNELS . . . . .	835
7.1. Organization and responsibilities of maintenance and service departments . . . . .	835
7.11. Inspection of the shape of the tunnel . . . . .	835
7.12. Inspection of the track drainage and insulation . . . . .	838
71.21. Inspection of the tracks . . . . .	838
71.22. Inspection in the Budapest Subway . . . . .	839
7.13. Inspection and maintenance of lining and tracks . . . . .	840
7.14. Organization of maintenance services . . . . .	842
7.15. Storage of maintenance equipment . . . . .	843
7.2. Deterioration and repair of tunnels . . . . .	843
7.21. Causes of deterioration of tunnels . . . . .	844
72.11. Deterioration due to defective materials and workmanship . . . . .	844
72.12. Deterioration caused by water . . . . .	844
72.13. Damage caused by smoke . . . . .	846
72.14. Damage due to atmospheric conditions . . . . .	846
72.15. Impact damage . . . . .	846
72.16. Damage caused by overburden . . . . .	847
72.17. Deterioration in pressure tunnels . . . . .	847
72.18. Damage to railway tracks . . . . .	848
72.19. Maintenance of cables . . . . .	848
7.22. Repair and reconstruction of tunnels . . . . .	848
72.21. Repairs to the drainage system . . . . .	849
72.22. Repair of linings . . . . .	857
7.23. Remodelling and reconstruction of tunnels . . . . .	861
72.31. Reconstruction for operational demands . . . . .	861
72.32. Reconstruction because of decay and external effects . . . . .	862
72.33. Examples of tunnel remodelling . . . . .	864
7.3. Surface subsidences resulting from tunnel construction . . . . .	869
7.31. Estimation of surface subsidences . . . . .	869
73.11. Estimating surface subsidence on a theoretical basis . . . . .	870
73.12. Estimating subsidence from actual observations . . . . .	877
7.32. Measuring the subsidence of buildings due to subway construction . . . . .	879
References . . . . .	882
General literature . . . . .	883
Index . . . . .	885
