CONTENTS

Preface ix
Notation xi

1.0 Introduction: Description and Classification of Alluvial Estuaries 1

1.1 Importance of estuaries to mankind 2
1.2 Classification of estuaries 4
1.3 Estuary numbers 8
1.4 Alluvial estuaries and their characteristics 10
1.4.1 The shape of alluvial estuaries 11
1.4.2 Dominant mixing processes 13
1.4.3 How the tide propagates 14
1.4.4 How the salt intrudes 17
1.5 What will follow 22

2.0 Tide and Estuary Shape 23

2.1 Hydraulic equations 24
2.1.1 Basic equations 24
2.1.2 The seventh equation 28
2.1.3 The one-dimensional equations for depth and velocity 32
2.1.4 The effect of density differences and tide 35
2.2 The shape of alluvial estuaries 43
2.2.1 Classification on estuary shape 43
2.2.2 Assumptions on the shape of alluvial estuary in coastal plains 48
2.2.3 Assumptions on estuary shape in short estuaries 53
2.3 Relating tide to shape 56
2.3.1 Why look for relations between tide and shape? 56
2.3.2 Theoretical derivations 56

3.0 Tidal Dynamics 69

3.1 Tidal movement and amplification 69
3.1.1 Why is the tidal wave amplified or damped? 69
3.1.2 Derivation of the tidal damping equation 70

3.1.3 *Application of the derived formula to observations* 77
3.1.4 *Conclusions* 78
3.2 Tidal wave propagation 79
3.2.1 *The relation between tidal damping and wave celerity* 79
3.2.2 *Theory of wave propagation* 82
3.2.3 *Empirical verification in the Schelde and Incomati estuaries* 92
3.2.4 *The wave celerity according to Mazure* 95
3.2.5 *Conclusion* 96
3.3 Effect of river discharge and other higher order effects on tidal damping 98
3.3.1 *Which higher order effects are important* 98
3.3.2 *Incorporating river discharge into the derivation of the Celerity equation* 99
3.3.3 *Incorporating river discharge into the derivation of the Damping equation* 100
3.3.4 *Application to the Schelde-estuary* 104
3.3.5 *Conclusion* 105
3.4 The influence of climate change and human interference on estuaries 105

4.0 Mixing in Alluvial Estuaries 109

4.1 Types of mixing, their relative importance, and interaction 109
4.2 Gravitational circulation 113
4.3 Mixing by the tide 115
4.4 Residual circulation through flood and ebb channels 116
4.5 The decomposition method and why it is not very useful 122
4.6 Longitudinal effective dispersion 126
4.7 Van den Burgh's equation 132
4.7.1 *The physical meaning of Van den Burgh's K* 133
4.7.2 *Correspondence with other methods* 134
4.8 General equation for longitudinal dispersion 135

5.0 Salt Intrusion in Alluvial Estuaries 137

5.1 Types of salt intrusion and shapes of salt intrusion curves 137
5.2 Salt balance equations 139
5.3 Influence of rainfall and evaporation 144
5.4 Time scales and conditions for steady state 149
5.5 Predictive model for steady state 153
5.5.1 *Expressions for HWS, LWS, and TA* 153
5.5.2 *Empirical relations for the predictive model* 159
5.5.3 *The predictive model compared to other methods* 169
5.6 Unsteady state model 171
5.6.1 *System response time* 171

5.6.2 Unsteady state dispersion 176
5.6.3 Application of the unsteady state model 177
5.7 Hypersaline estuaries 181
5.8 Concluding remarks 183
