# *Finite Elements in Geotechnical Engineering*

D. J. Naylor and G. N. Pande
*Department of Civil Engineering, University College of Swansea, U.K.*

*with chapters contibuted by*
B. Simpson and R. Tabb

1981

PINERIDGE PRESS
Swansea, U.K.

UNIVERSITA' D. STUDI
BIBLIOTECA

# CONTENTS

| | | Page |
|---|---|---|
| 1. | INTRODUCTION | 1 |
| 1.1 | Objectives | 1 |
| 1.2 | Scope | 2 |
| 1.3 | Invariants | 4 |
| 1.4 | References | 9 |
| 2. | FINITE ELEMENT BASICS | 11 |
| 2.1 | Introduction | 11 |
| 2.2 | Elements | 12 |
| 2.3 | Shape functions | 15 |
| 2.4 | Co-ordinate transformation | 17 |
| 2.5 | Strain-displacement relations | 19 |
| 2.6 | Stress-strain relations | 20 |
| 2.7 | Stiffness equations | 20 |
| 2.8 | Body forces | 25 |
| 2.9 | Surface tractions | 25 |
| 2.10 | References | 27 |
| 3. | GEOTECHNICAL CONSIDERATIONS | 29 |
| 3.1 | Introduction | 29 |
| 3.2 | Effective stress methods | 29 |
| 3.3 | Loadings | 40 |
| 3.4 | Initial stresses | 42 |
| 3.5 | Excavation | 46 |
| 3.6 | Fills | 51 |
| 3.7 | References | 58 |
| 4. | VARIABLE-ELASTIC STRESS-STRAIN LAWS | 59 |
| 4.1 | Introduction | 59 |
| 4.2 | Bi-linear elastic model | 61 |
| 4.3 | K-G model | 62 |
| 4.4 | Hyperbolic model | 64 |
| 4.5 | Comparison of models | 65 |
| 4.6 | Variable elastic or elasto-plasticity? | 66 |
| 4.7 | References | 68 |

| | | Page |
|---|---|---|
| 5. | ELASTO-PLASTIC AND ELASTO-VISCO-PLASTIC STRESS-STRAIN LAWS | 69 |
| 5.1 | Introduction | 69 |
| 5.2 | Basic concepts | 71 |
| 5.3 | Yield function - specific forms | 75 |
| 5.4 | Dilatancy | 78 |
| 5.5 | Hardening law - specific forms | 82 |
| 5.6 | Formulation of elasto-plastic stress-strain law | 84 |
| 5.7 | Elasto-visco-plasticity | 86 |
| 5.8 | References | 91 |
| 6. | LIMIT THEOREMS AND THEIR APPLICATION | 93 |
| 6.1 | Introduction | 93 |
| 6.2 | Rigid-plastic material | 93 |
| 6.3 | Corrollaries of the normality principle | 95 |
| 6.4 | Stress and velocity discontinuities | 99 |
| 6.5 | Requirements of a solution to a boundary value problem | 100 |
| 6.6 | Statically and plastically admissible (SPA) stress field | 101 |
| 6.7 | Lower bound theorem | 101 |
| 6.8 | Examples of application of the lower bound theorem | 102 |
| 6.9 | Kinematically admissible strain rate field | 105 |
| 6.10 | Upper bound theorem | 105 |
| 6.11 | Examples of application of the upper bound theorem | 105 |
| 6.12 | Improved solutions | 109 |
| 6.13 | Application of the limit theorems to strain hardening materials | 112 |
| 6.14 | References | 112 |
| 7. | CRITICAL STATE MODEL | 113 |
| 7.1 | Introduction | 113 |
| 7.2 | The geometric model | 114 |
| 7.3 | Hardening law | 119 |
| 7.4 | Yield function | 121 |
| 7.5 | Flow rule | 123 |
| 7.6 | Stress-strain invariant relation | 125 |
| 7.7 | Stress-strain component relation | 129 |
| 7.8 | Parameter values | 132 |
| 7.9 | Examples | 134 |
| 7.10 | Conclusions | 145 |
| 7.11 | References | 148 |

Page

8. TECHNIQUES FOR NON-LINEAR ANALYSIS 149

8.1 Introduction 149
8.2 Classification of techniques 149
8.3 Equivalent load methods 150
8.4 Variable stiffness methods 155
8.5 Assessment of techniques 159
8.6 References 159

9. SEEPAGE ANALYSIS 161

9.1 Introduction 161
9.2 Seepage equations 161
9.3 Finite element discretization of seepage equation 164
9.4 Computation of velocities and flows 167
9.5 Treatment of free surface boundary 169
9.6 Examples 169
9.7 References 171

10. ANALYSIS OF JOINTED ROCK MASSES 173

10.1 Introduction 173
10.2 Some characteristics of rocks 173
10.3 Discontinuities in the rock masses 175
10.4 Some models of the behaviour of jointed rock 176
10.5 Generalized plane strain analysis in rock mechanics 185
10.6 Effective stress analysis of undrained rock masses 189
10.7 References 190

11. SOME CASE HISTORIES (by Roy Tabb) 193

11.1 Introduction 193
11.2 Lined tunnel with ground freezing 193
11.3 Cantilever retaining wall analysis 196
11.4 Oil tank on normally consolidated deposits 199
11.5 Cavern analysis 207
11.6 Acknowledgements 211
11.7 References 211

12. FINITE ELEMENTS IN DESIGN with particular reference to deep basements in London Clay (by Brian Simpson) 213

12.1 Introduction 213
12.2 Back-analysis 214

continued.....

Page

12. FINITE ELEMENT IN DESIGN (continued)

12.3 Underground car park at the Palace of Westminster 219
12.4 The work of St. John 223
12.5 A further development 226
12.6 Use of the finite element method in the design of deep basements 232
12.7 Conclusions 239
12.8 Acknowledgements 240
12.9 References 241
