

DESIGN TEXTBOOKS IN CIVIL ENGINEERING: VOLUME II

IRRIGATION ENGINEERING: SYPHONS, WEIRS AND LOCKS

SERGE LELIAVSKY

Ph.D., M.I.C.E., F.Am.Soc.C.E.

*formerly Director, Designing Service, Reservoirs and Nile
Barrages Department, Ministry of Public Works, Cairo,
Chief of Designing Office, Irrigation Projects Department,
Ministry of Public Works, Cairo, Professor of Irrigation
Design, Royal School of Engineering, Guiza, Cairo, Head
of the Bridges Department, Egyptian State Railways,
Cairo, Head of the Hydraulic Section of Lock and Dam
Construction Works on the Dnieper Falls, Russia*

CHAPMAN AND HALL LTD

LONDON

CONTENTS

| | |
|---|----------------------|
| 3. Irrigation and Drainage Syphons | <i>page</i> 1 |
| <i>Section I. HYDRAULICS OF SYPHONS</i> | |
| 1. General Notes | 1 |
| 2. Loss of Head in the Inlet or at the Outlet of a Syphon | 2 |
| 3. Loss of Head due to Skin Friction in the Barrel of the Syphon | 5 |
| 4. General Formula for the Calculation of the Heading-up in Straight Syphons | 7 |
| 5. Loss of Head due to Elbows and Bends | 9 |
| 6. Practical Applications to the Design of Steel Syphons | 12 |
| 7. Straight versus Bent Pipes | 18 |
| <i>Section II. STRUCTURAL DESIGN OF STEEL SYPHONS</i> | |
| 1. Stability of a Syphon in General | 20 |
| 2. Stability of a Pipe | 22 |
| 3. Empirical Design of the Steelwork of a Syphon | 28 |
| 4. Masonry Parts of a Steel Syphon | 33 |
| 5. Special Types of Masonry Heads for Steel Syphons | 43 |
| 6. Erection of Steel Syphons. Gratings | 45 |
| 7. Non-Egyptian Steel and Iron Syphons | 49 |
| <i>Section III. DESIGN OF MASONRY SYPHONS</i> | |
| 1. Hydraulic Analysis of the Section of a Masonry Syphon. Practical Applications | 53 |
| 2. Structural Design of Masonry Syphons. Uplift. Empirical Formulae for Arches, Abutments, Piers etc. | 60 |
| 3. General Lay-out of a Masonry Syphon | 67 |
| <i>Section IV. DESIGN OF REINFORCED CONCRETE SYPHONS</i> | |
| 1. Types of Reinforced Concrete Syphons | 71 |
| 2. The Circular-Pipe Type | 71 |
| 3. The "Line-of-Pressure" Type | 76 |
| 4. The Box Culvert | 80 |
| 5. Example | 87 |

4. Weirs and Other Irrigation Works in Canals

page 90

Section I. WEIRS IN CANALS AND THEIR FUNCTIONS

- | | |
|--|----|
| 1. General | 90 |
| 2. Weirs for the Control of Water Distribution | 90 |
| 3. "Canal Falls" | 94 |
| 4. Weirs for Measuring the Discharge | 95 |
| 5. Weir, as an Emergency Device | 96 |

Section II. HYDRAULIC AND STRUCTURAL DESIGN OF WEIRS IN CANALS

- | | |
|---|-----|
| 1. Traditional Calculation Method | 97 |
| 2. Effect of Velocity of Approach. Butcher's Experiments | 99 |
| 3. Side Contraction. Butcher's Discharge Formulae | 101 |
| 4. Designed Water Depth over Sill | 104 |
| 5. Structural Design (Fayum Type) | 105 |
| 6. Weir Submerged | 109 |
| 7. Standing-Wave Weirs | 111 |
| 8. Movable Standing-Wave Weir | 113 |
| 9. Weirs in Loose Material built for Reducing the Head on Existing Works and for Other Purposes | 116 |

Section III. THE INDIAN TYPE OF CANAL FALL

- | | |
|---------------------------------|-----|
| 1. The Notched Type | 119 |
| 2. The Standing-Wave-Flume Type | 122 |

Section IV. THE AMERICAN TYPE

- | | |
|---|-----|
| 1. Classical Formula | 133 |
| 2. New Experiments and Design Methods Derived therefrom | 134 |
| 3. The Sills | 138 |
| 4. Bureau of Reclamation Designs | 140 |

Section V. AUTOMATIC SPILLWAY SIPHONS 143*Section VI.* DEVICES FOR EXCLUDING AND EXTRACTING HEAVY SILT AND SEDIMENT FROM IRRIGATION CANALS

- | | |
|---------------------------------------|-----|
| 1. The Problem | 154 |
| 2. Main Principle of the Solution (b) | 155 |
| 3. The Influence of Angle of Twist | 161 |
| 4. Practical Application | 166 |
| 5. Design Example | 169 |
| 6. Silt-excluders and Silt-extractors | 169 |

Section VII. THE PARSHALL FLUME AND OTHER AMERICAN TYPES FOR MEASURING THE DISCHARGE IN DISTRIBUTARIES

170

CONTENTS

ix

Section VIII. THE CHUTE

page 186

5. Navigation Locks

191

Section I. ON LOCKS GENERALLY

1. Locks in Irrigation Engineering. Relative Position of Lock and Regulator 191
2. Length and Width of Locks. Arrangement of the Upstream and Downstream Heads dependent on the Type of Gates 193
3. The Emptying and Filling of the Lock 198
4. Height of Lock 203

Section II. LOCK-WALLS

1. Walls of a Lock with Independent Conduits 205
2. Walls in a Lock with Continuous Conduits 207
3. Examples and Empirical Rules 209
4. Design of Walls at the Upstream and Downstream Heads of the Lock 213
5. Outer Walls of Locks built in the Main Channel 214
6. Strengthening of a Lock-wall 216

Section III. FLOORS AND FOUNDATIONS OF LOCKS

1. Basic Types of Lock-foundations 217
2. General Principles of Stress Analysis 220
3. Forces Applied to a Continuous Lock-foundation 222
4. Bending Stresses in a Lock-floor 224
5. Analysis of the General Bending Formula 226
6. Line of Pressure for a Lock-chamber 231
7. Approximate Formulae for the Floor of a Lock 231
8. Asymmetrical Locks 232
9. Ashlar and Cast Iron Sills 234
10. Particular Types of Lock-Foundations 236

Section IV. METHODS OF DESIGN AND CALCULATION OF SOLID LOCK-FLOORS

1. Foreword 237
2. Apjohn's Method 237
3. French Method 238
4. Concealed Arch Effect 240
5. Linear Foundation Pressure Distribution and Criterion of Francius 243
6. Criticism and Improvements of the Method of Francius 250
7. Examples of Exceptional Soil Conditions 255

Section V. REINFORCED CONCRETE LOCKS

1. General Notes 257
2. Bending Moment Diagram 258
3. Overall Weight of the Lock-chamber 263

Section VI. LOCK-GATES

| | |
|--|----------|
| 1. General Notes on Lock-gates | page 266 |
| 2. Details of the Design of Steel Gates of Moderate Size | 269 |
| 3. Lock-gates of the Sector Type | 287 |
| SUBJECT INDEX | 291 |
| AUTHOR INDEX | 295 |
