## International Conference on RIVER REGIME 18-20 May 1988

## CONTENTS

PAPER		PAGE
	ANALYTICAL AND EMPIRICAL APPROACHES TO RIVER REGIME	
A1	Dimensional and dimensionless regime equations for gravel-bed rivers. R. D. Hey and G. L. Heritage, University of East Anglia, UK.	1
A2	Downstream hydraulic geometry of noncohesive alluvial channels. P.Y. Julien, Colorado State University, USA.	9
A3	Dynamic adjustments of channel width and slope. C. T. Yang, U. S. Bureau of Reclamation and A. Molinas, Colorado State University, USA.	17
A4	Prediction of hydraulic geometry of gravel-bed streams using the minimum stream power concept. C. R. Thorne, Queen Mary College (University of London), R. D. Hey,University of East Anglia, UK. and H. H. Chang, San Diego State University, USA.	29
B1	Regime relations based on dispersive-force concentration profiles. K. C. Wilson, Queen's University at Kingston, Canada.	41
B2	Regime channels of an extremely arid zone. M. Nouh, King Saud University, Saudi Arabia.	55
B3	The application of regime theory to wadi channels in desert conditions. P. B. Clark and S. M. A. Davies, Binnie & Partners, UK.	67
C1	On the cause of river meandering. H. H. Chang, San Diego State University, USA.	83
C2	Stability of initially straight rivers. P. Diplas, J. F. Kennedy and A. J. Odgaard, The University of Iowa, USA.	95
СЗ	On the threshold between meandering and braiding. N. Struiksma and G. J. Klaassen, Delft Hydraulics, The Netherlands.	107
C4	About extremal hypotheses and river regime. A. Lamberti, University of Bologna, Italy.	121
D1	The influence of bank stability on regime geometry of natural channels. C. R. Thorne, Queen Mary College (University of London), UK and A. M. Osman, University of Khartoum, Sudan.	135
D2	On the width of regime channels. R. Bettess, W. R. White and C. E. Reeve, Hydraulics Research Limited, UK.	149
D3	Effects of gradation of bed materials and transpiration through a bed on bed load transport. H. Nakagawa and S. Murakami, Kyoto University, Japan and T. Tsujimoto, LHYDREP, E.P.F.L., Lausanne, Switzerland.	163
	FIELD AND LABORATORY STUDIES	
E1	Channel characteristics of the braiding Jamuna River, Bangladesh. G. J. Klaassen and K. Vermeer, Delft Hydraulics, The Netherlands.	173
E2	Characteristics of flow at the intersection of river meanders and flood relief (cut-off) channels. J. G. Herbertson and Y. R. Fares, University of Glasgow, UK.	191

PAPER	FIELD AND LABORATORY STUDIES (Continued)	PAGE
E3	Regime bed slopes of channels with a buoyant boundary. S. P. Chee and M. R. Haggag, University of Windsor, Canada.	203
F1	Sediment size and channel changes in braided and meandering gravel-bed streams, Upper Deeside, Scotland. J. Maizels, University of Aberdeen, UK,	215
F2	Change of river regime and graded-sediment discharge during flood. K. Suzuki and M. Michiue, Tottori University, Japan.	231
F3	A study on the staircase profile and armouring effects of river bed for torrential streams in Taiwan. C. W. Ho. National Chung Hsing University, Taiwan, B.O.C.	241
G1	Estimation of friction factor in natural streams. N. N. J. Higginson, Department of Agriculture for Northern Ireland and H. T. Johnston, The Queen's University of Belfast, UK.	251
G2	The prediction of mean bed and wall boundary shear in uniform and compositely rough channels.	
	T. P. Flintham, University of Leicester and P. A. Carling, Freshwater Biological Association, UK.	267
G3	Multiple bars and stream braiding. Y. Fujita and Y. Muramoto, Kyoto University, Japan.	289
G4	On bed form configurations of a river bend. H-Y. Lee and H-Y. Ho, National Taiwan University, Taiwan, R.O.C.	301
	INFLUENCES ON RIVER MORPHOLOGY	
H1	Regime aspects of flood control channelization. C. R. Neill and E. K. Yaremko, Northwest Hydraulic Consultants Canada.	317
H2	The influence of river regime on the flood management of Sukkur Barrage, Pakistan. P. Ackers, Consultant, I. G. G. Hogg, K. Guganesharajah and P. D. S. Gunn, Sir M. MacDonald & Partners Ltd., UK.	331
H3	The application of bed stability criteria in rivers with consecutive run-of-river power plants. H. Scheuerlein, Technical University, Munich, F. R. Germany.	355
11	Regime changes in the Caledon River associated with sediment deposition upstream of Welbedacht barrage.	265
12	Regime changes in the Caledon River associated with Welbedacht barrage: physical model, prototype and theoretical correlations. J. M. Jordaan and D. Clark, Department of Water Affairs, South Africa.	375
13	Effects of extensive dredging on the river regime. S. Kornis and I. A. Laczay, Research Centre for Water Resources Development, "VITUKI", Hungary.	385
J1	The effect of boat traffic on river regime. P. N. Garrad, Forth River Purification Board and R. D. Hey, University of East Anglia, UK.	395
J2	The use of empirical method (erosion potential method) for calculating sediment production and transportation for unstudied or torrential streams. Z. Gavrilovic, Institute for development of Water Resources, "Jaroslav Cerni", Yugoslavia.	411
J3	Earthquakes and river regimes. A. Bapat, Central Water and Power Research Station, India.	423
J4	Regime theory and environmental change - irreconcilable concepts? J. Lewin, University College of Wales, Aberystwyth and M. G. Macklin and M. D. Newson, University of Newcastle upon Tyne, UK.	431
