## CONTENTS

<i>Preface</i>	v
<i>Chapter 1. Shoreline processes</i>	
Nature of ocean waves	1
Storm waves	2
Swell waves	3
Angled wave trains	4
Beach processes	6
Surf zone	7
Offshore zone	7
Swell profile	10
Storm profile	12
Meteorological cycles	15
Enclosed seas	17
Tidal range	18
Ocean currents	20
Estuarine conditions	22
Calculation of beach profiles	24
Offshore profile	24
Swell to storm profile	25
Theoretical analysis	26
Calculation of littoral drift	28
Littoral current	29
Littoral drift	29
Offshore conditions	33
Theory for motion of sediment	33
Shear-stress approach	35
Other shear-stress approaches	39
Practical aspects of shear-stress approach	40
The macroscopic approach	42
Description of particle motion	43
Effects of permeability	52
Reach of waves	53
Transport rates in surf and offshore zones	57
Problems	62
References	64

<i>Chapter 2. Long-term longshore drift</i>	71
Equilibrium shapes of bay	72
Field observations	74
Model studies	75
Equation of beach plan	77
Test of stability	81
Physiographic units	84
Contour spreading	85
Shoals	87
End conditions	89
Continental patterns	90
World-wide pattern of net sediment movement	94
Geomorphological study of a coastline	98
Sediment supply	98
Wave climate	99
Physiography and climate of Japan	100
Wave climate	101
Sediment movement	106
Deltas	113
Pattern-forming forces	114
Regression analysis	119
Apex to sea length	120
Delta area	120
Maximum width of delta	121
Maximum width to number of mouths and of distributaries	122
Delta topography	122
Side topography	123
Problems	124
References	125
<i>Chapter 3. Coastal defense</i>	127
Groins	128
Headland control	131
Inlet entrances	134
By-passing	139
Shoreline harbours	140
Walls and revetments	143
Beach nourishment	145
Estuarine problems	146
Dredging	148
Problems	153
References	155

<i>Chapter 4. Long-period waves</i>	159
Tides	160
Influence of continental shelf	163
Transitions—no friction	163
Transitions—with friction—progressive wave	166
Transitions—with friction—total reflection	172
Typical tides	174
Storm surge	178
Wind stress	178
Enclosed bodies of water	180
Continental shelf	183
Examples of Hong Kong surges	188
Examples	190
Problems	196
References	199
<i>Chapter 5. Estuarine problems</i>	203
Salt-water wedge	203
Mixing processes	211
Estuary pollution	218
Dispersion model	220
Tidal prism concept	222
Estuary sedimentation	224
Estuary control	228
Examples	230
Problems	233
References	236
<i>Chapter 6. Marine hydraulic works</i>	239
Sewage disposal	240
Circular jet uniform density medium	243
Circular jet in non-uniform density medium	246
Slotted jet in uniform density medium	249
Slotted jet in non-uniform density medium	253
Experimental verification	254
Mixing tubes	256
Surface spreading	259
Miscellaneous considerations	260
Cooling water structures	262
Outfalls	262
Intakes	266

Examples . . . . .	274
Problems . . . . .	279
References . . . . .	282
<i>Chapter 7. Hydraulic modelling</i> . . . . .	285
Similitude . . . . .	286
Waves . . . . .	287
Tides and currents . . . . .	292
Movable bed models . . . . .	294
Onshore wave action . . . . .	296
Offshore wave action . . . . .	298
Examples . . . . .	307
Problems . . . . .	309
References . . . . .	311
<i>Appendix. Tables of functions of <math>d/L_o</math></i> . . . . .	315
<i>Index</i> . . . . .	329
