OPERATIONAL HYDROLOGY REPORT No. 29

MANUAL ON OPERATIONAL METHODS FOR THE MEASUREMENT OF SEDIMENT TRANSPORT

by

LONG YUQIAN

WMO - No. 686

SECRETARIAT OF THE WORLD METEOROLOGICAL ORGANIZATION - GENEVA - SWITZERLAND

1989

CONTENTS

Page

Foreword	ix
Summary (English, French, Russian, Spanish).....	xi
Chapter 1 - MEASUREMENT OF SUSPENDED SEDIMENT	
1.1 Minimum network for measurement of sediment transport	1
1.2 Measurement methods	2
1.2.1 Measurement of suspended sediment discharge in a vertical.....	2
1.2.1.1 Selection of measuring points in a vertical	3
1.2.1.2 Sampling by depth integration in a vertical	6
1.2.2 Selection of sampling verticals	7
1.2.2.1 Selection of verticals based on the transverse distribution of concentration.....	9
1.2.2.2 Selection of verticals based on equal discharge	11
1.2.2.3 Selection of equally spaced verticals	11
1.2.3 Conventional and simplified sampling methods	13
1.2.3.1 Multipoint and/or multivertical method	13
1.2.3.2 Conventional method	13
1.2.3.3 Simplified method	14
1.2.4 Sampling for size analysis.....	16
1.2.5 Analysis of samples	18
1.2.6 Frequency and timing of sampling	20
1.3 Computation of sediment discharge	20
1.4 Measuring devices and instrumentation	21
1.4.1 Sampler for taking representative samples	22
1.4.2 <i>In situ</i> measurement of sediment concentration	26
1.4.2.1 Nuclear gauge	27
1.4.2.2 Photo-electric turbidity meter	28
1.4.2.3 New developments	30
1.4.3 Intercomparison of measuring devices	32
Chapter 2 - MEASUREMENT OF BED LOAD	
2.1 Measurement methods	35
2.1.1 Direct method	35

	<i>Page</i>
2.1.2 Indirect method	36
2.1.2.1 Sedimentation process	36
2.1.2.2 Dune tracking	36
2.1.2.3 Tracer method	37
2.1.2.4 Investigation of the lithologic properties of sediment	38
2.2 Measurement of bed-load discharge	38
2.2.1 Characteristics of bed-load transport	38
2.2.2 Frequency of measurement	39
2.2.3 Selection of sampling verticals	43
2.2.3.1 Determination of the boundary of bed-load movement	43
2.2.3.2 Selection of sampling verticals	43
2.2.4 Duration of sampling and number of repetitions required	43
2.3 Measuring devices	46
2.3.1 Technical requirements for an idealized bed-load sampler	46
2.3.2 Various kinds of bed-load samplers	46
2.3.2.1 Pressure-difference type	46
2.3.2.2 Selection of verticals based on equal discharge	47
2.3.2.3 Pan or tray type	49
2.3.2.4 Slot or pit type and sampling method	49
2.3.3 Problems remaining in the measurement of bed load	50
2.3.3.1 Problems relating to the measuring devices	50
2.3.3.2 Influence of bed configuration on bed-load sampling	50
2.3.3.3 Operational techniques	52
2.4 Calibration of samplers	52
2.4.1 Direct field calibration	52
2.4.2 Indirect field calibration	53
2.4.3 Laboratory calibration	53
2.5 Computation of bed-load discharge	54

Chapter 3 - MEASUREMENT OF TOTAL SEDIMENT DISCHARGE

3.1 Direct methods	56
3.1.1 Measurement of suspended sediment and bed-load discharge.....	56
3.1.2 Measurement by sediment accumulation	57
3.1.3 Measurement by means of turbulence flume	57
3.2 Indirect methods	58
3.2.1 Modified Einstein Procedure and other methods	58
3.2.2 Stelczer method for indirect estimation of bed-load transport	59
3.2.3 Modification coefficient method	63
3.2.4 Ratio of bed-load discharge to suspended-sediment discharge	66
3.3 Comments	66

Chapter 4 - MEASUREMENT OF EROSION AND DEPOSITION IN RESERVOIRS AND RIVER REACHES

4.1	General description	69
4.2	Methodology and instrumentation	69
4.2.1	Topographic method	69
4.2.1.1	Scale of topographic map	70
4.2.1.2	Preliminary and repetitive surveys	70
4.2.2	Range method	70
4.2.2.1	Arrangement of ranges at reasonable intervals	70
4.2.2.2	Surveying method	73
4.2.2.3	Frequency of surveys	73
4.2.3	Composite method	73
4.2.4	Instruments for positioning and depth sounding	74
4.2.4.1	Depth sounding	74
4.2.4.2	Positioning of sounding points	75
4.2.4.3	Surveying system	75
4.2.4.4	Measuring sediment thickness	77
4.3	Measurement of bed material composition	77
4.3.1	Undisturbed sampling	77
4.3.2	Radioisotope density probe	79
4.3.3	Selection of sampling points	82
4.4	Data processing	83
4.4.1	Computation of reservoir capacity	83
4.4.2	Computation of volume of deposition and erosion	85
4.4.3	Computation of capacity from topographic survey	85

Chapter 5 - LABORATORY PROCEDURES

5.1	Measurement of sediment concentration	87
5.1.1	Evaporation method	89
5.1.2	Filtration method	89
5.1.3	Displacement method	90
5.1.4	Other methods	91
5.2	Size analysis	91
5.2.1	Selection of methods for size analysis	91
5.2.1.1	Sieve analysis	95
5.2.1.2	Methods based on settling principle	96
5.2.2	Treatment of samples for size analysis	103
5.3	Measurement of physical properties	105
5.3.1	Density or specific gravity	105

	<i>Page</i>	
5.3.2	Unit weight of sediment deposits	106
5.3.3	Determination of dissolved solids	107
5.4	Monitoring the quality of particulate matter	109
5.4.1	General	109
5.4.2	Monitoring programme	110
5.4.3	Field work	110
5.4.4	Laboratory procedures and data evaluation	112

Chapter 6 - DATA PROCESSING

6.1	Data processing for suspended load	113
6.1.1	Computation of sediment discharge and cross-sectional average sediment concentration	113
6.1.1.1	Relationship of unit sample concentration and cross-sectional average concentration	114
6.1.1.2	Variations of proportional coefficient with water stage	116
6.1.1.3	Variations of proportional coefficient with time	118
6.1.1.4	Discharge-sediment-discharge relationship	119
6.1.2	Development of a sediment hydrograph	119
6.1.3	Computation of average daily sediment discharge and concentration	120
6.1.4	Tabulation of average daily sediment discharge and concentration	122
6.1.5	Examination of processed data and explanations of data processing	122
6.1.5.1	Examination of processed data	123
6.1.5.2	Summary of explanations of data processing	123
6.2	Data processing for bed load	124
6.2.1	Computation of daily bed-load transport rate	124
6.2.1.1	Bed-load transport as related to average velocity	124
6.2.1.2	Bed-load transport as related to discharge	124
6.2.2	Tabulation of results and explanation	126
6.3	Data processing for sediment size	128
6.3.1	Average daily grain size of suspended load	128
6.3.2	Computation of average monthly and annual sediment size	130
6.3.3	Examination of the reasonableness of the processed data	130
6.4	Data processing by computer	131
6.4.1	Computation of sediment discharge	131
6.4.1.1	Cross-sectional average sediment concentration	131
6.4.1.2	Computation of average daily sediment concentration	131
6.4.1.3	Extraction of sediment-transport data	132

	<i>Page</i>
6.4.1.4 Flow chart	132
6.4.2 Data processing for particle size distribution	132
6.5 Data transmission, storage and publication	132

Chapter 7 - ASSESSMENT OF ACCURACY AND RELIABILITY IN MEASUREMENT OF SEDIMENT TRANSPORT

7.1 General description	135
7.2 Major factors influencing the reliability of measurement of sediment transport	135
7.2.1 Apparatus	135
7.2.2 Characteristics of measuring section	136
7.2.3 Sampling frequency	139
7.2.4 <i>In situ</i> measurement	140
7.2.5 Measurement of concentration and size analysis in laboratory	141
7.2.6 Computation method and data processing	143
7.3 Major factors influencing the reliability of bed-load measurement	144
7.4 Analysis of systematic errors	145
7.4.1 Evaluation of sedimentation processes	145
7.4.2 Systematic errors induced by sediment measurement in a vertical	149
7.5 Analysis of random error	150
7.5.1 Estimation of random errors involved in the measurement of sediment transport	151
7.5.2 Examples of analysis	151
7.5.2.1 Error in the measurement of sedimentation by surveying method	151
7.5.2.2 Error by sediment balance	153
7.6 General comment	154

Chapter 8 - SUMMARIES AND RECOMMENDATIONS

8.1 Fundamental concepts	156
8.2 Implementation of measuring programme	156
8.3 Measuring site	157
8.4 Measurement of suspended-sediment discharge	158
8.5 Corrections for transport in the unmeasured zone	158
8.6 Frequency of measurement	158
8.7 Sampling apparatus - suspended sediment	158
8.8 Sampling apparatus - bed sediment	159
8.9 Computation of total load	159
