

Studies on the Development of Economical Drainage Systems for Multi-storeyed Buildings

Dr. S.P. Chakrabarti

1987

A.A. BALKEMA/ROTTERDAM

Contents

ACKNOWLEDGMENT	...	v
SUMMARY	...	xi
CHAPTER I. INTRODUCTION	...	1
1.1 Drainage Systems	...	1
1.2 Limitations of Existing Design Procedure for Drainage Systems	...	2
1.2.1 Peak hydraulic load in drainage stack	...	2
1.2.2 Considerations concerning terminal velocity of water inside vertical drainage pipe in unvented system	...	3
1.2.3 Comments on the design of vented system	...	3
1.3 Present Study	...	4
CHAPTER II. SHORT RÉSUMÉ OF PERTINENT PREVIOUS RESEARCH	...	5
2.1 Requirements for an Efficient Drainage System	...	5
2.2 Hydraulics of Air-Water Flow in Drainage Stack	...	5
2.3 Terminal Velocity in Stack	...	8
2.4 Terminal Length in Stack	...	12
2.5 Air-Water Flow Relationships	...	15
2.6 Empirical Approach to the Design of Unvented Drainage Stack	...	15
2.7 Rational Approach to the Design of Unvented Drainage Stack	...	18
2.8 Empirical Approach to the Design of Vent Stack	...	22

2.9	Rational Approach to the Design of Vent Stack	...	23
2.10	Hydraulic Loading in Drainage Stack	...	27
2.10.1	Theory of probability for predicting peak hydraulic load	...	28
2.10.1.1	Application of probability theory to a simple system	...	28
2.10.1.2	Design load for mixed system	...	29
2.11	Performance Study of Horizontal Branch	...	30
2.11.1	Fixture discharge characteristics	...	30
2.11.2	Seal-loss due to self-siphonage	...	30
2.12	Limitations of Existing Design Procedures for Unvented and Vented Drainage Systems	...	31
CHAPTER III. ANALYSIS OF FLOW IN DRAINAGE STACK			...
3.1	Computation of Suction Inside Drainage Stack	...	33
3.1.1	Unvented drainage system	...	33
3.1.2	Partially vented drainage system	...	36
3.1.2.1	Computation of head-losses	...	37
3.2	Water-Film Thickness	...	39
3.3	Velocity at Air-Water Interface	...	41
3.4	Air Flow Inside Stack	...	41
CHAPTER IV. EXPERIMENTAL SET-UPS AND SCHEDULE OF EXPERIMENTAL WORK			...
4.1	Validation of Analytical Model for Prediction of Suction Inside Stack	...	44
4.1.1	Peak discharge rates of sanitary appliances	...	44
4.1.2	Test loads	...	48
4.2	Verification of Analytical Model for MOP-System	...	50
4.3	Limiting Capacities of Stacks in Different Systems of Drainage	...	52
4.4	Simultaneous Peak Flow	...	52
4.4.1	Residential buildings	...	52

4.4.2 Office buildings	...	55
4.5 Performance of Horizontal Drains	...	56
CHAPTER V. RESULTS AND DISCUSSIONS	...	58
5.1 Computation of Suction for Unvented Drainage System in Buildings through Analytical Model	...	58
5.2 Computation of Suction for Partially Vented MOP-System through Analytical Model	...	61
5.3 Peak Hydraulic Load in Residential Buildings	...	64
5.3.1 Use frequency pattern	...	64
5.3.1.1 Sanitary installations and their discharge rates	...	64
5.3.1.2 Frequency of use of appliances	...	64
5.3.1.3 Discharge unit values	...	68
5.3.1.4 Simultaneous flow-discharge unit curve for residential buildings	...	71
5.3.2 Water demand in residential buildings	...	71
5.4 Peak Hydraulic Load in Office Buildings	...	73
5.4.1 Use frequency pattern	...	73
5.4.1.1 Discharge rates	...	73
5.4.1.2 Use frequency of appliances	...	73
5.4.1.3 Discharge unit values	...	76
5.4.1.4 Peak flow curve for office buildings	...	77
5.5 Further Research Need on Peak Hydraulic Load in Buildings	...	77
5.6 Limiting Capacity of Unvented Drainage Stack	...	79
5.7 Limiting Capacity of Partially Vented Drainage Stack	...	84
5.8 Performance Study of Horizontal Branch	...	90
5.9 Economics of SS- and MOP-Systems	...	94
CHAPTER VI. CONCLUSIONS	...	95
REFERENCES	...	97
APPENDIX	...	100
NOMENCLATURE	...	101
GLOSSARY OF PLUMBING TERMS	...	102
