### DESIGN TEXTBOOKS IN CIVIL ENGINEERING: VOLUME III

# DESIGN OF DAMS FOR PERCOLATION AND EROSION

## SERGE LELIAVSKY

Ph.D., M.I.C.E., F.Am.Soc.C.E.

formerly Director, Designing Service, Reservoirs and Nile Barrages Department, Ministry of Public Works, Cairo, Chief of Designing Office, Irrigation Projects Department, Ministry of Public Works, Cairo, Professor of Irrigation Design, Royal School of Engineering, Guiza, Cairo, Head of the Bridges Department, Egyptian State Railways, Cairo, Head of the Hydraulic Section of Lock and Dam Construction Works on the Dneiper Falls, Russia

OXFORD & IBH PUBLISHING CO NEW DELHI BOMBAY CALCUTTA

## CONTENTS

Introductory	page	1
Section I. GENERAL NOTES	1	
1. Essential Points in the Design of Weirs and Dams		1
2. Safety against Undermining—Uplifting of the Floor		2
3. Erosion of the Bed		4
Part One. Percolation of Water as a Structural Design Factor		5
Section II. FLOW OF WATER THROUGH A PERVIOUS SOIL		
1. Velocity-Slope Formula		$\mathbf{\tilde{5}}$
2. Effect of the Size of Grain and of the Porosity on the Velocit	y	
of Filtration. Hazen's Formula. Sizing Curve and Effective	ze .	
Size. Slichter's Formula		7
3. Formulæ which are not in Agreement with d'Arcy's Principl	e.	
Limits of Application of his Method		17
Section III. PERCOLATION OF WATER AS A FACTOR IN ESTIMAT	C -	
ING THE STRUCTURAL SAFETY OF THE APRON		
1. Bligh's Method		18
2. Theories of the Post-Bligh Period		21
Section IV. THEORY OF STREAM LINES. POTENTIAL FLOW		
1. The Stream Function		30
2. The Potential Function		33
3. Application of Potential Flow Theory to Seepage		37
4. Examples of Irrotational Flow		38
5. Boundary Conditions		41
Section V. MAIN PRINCIPLES OF THE CONFORMAL TRANS-		
FORMATION METHOD		
1. Foreword		42
2. Complex Numbers graphically represented		43
3. Complex Variables and Complex Functions		46
vii

C C	ONTEN	112
4. Basis and Object of Conformal Transformation	page	47
5. Conditions and Method of Conformal Transformation		49
6. Complex Potential		51
7. Examples of Conformal Transformation		52
Section VI. KHOSLA'S FIRST PROBLEM		
1. The Transformation Formula		57
2. General Problem of Pressure Distribution		63
3. Pressures and Gradients in Specific Points of the Found Lav-out	lation	67
4. The "Exit Gradient"		67
5. Specific types of Foundation Designs derived from the G	eneral	
Туре	citorar	69
Section VII. PAVLOVSKY'S PROBLEM		
1. Preliminary Remarks		79
2 Infinite Depth of Permeable Strata		80
3. General Principle of the Method		82
<ol> <li>Flat Foundation. Infinite Depth of Permeable Soil Stra</li> <li>Flat Foundation. Limited Depth of Permeable Strata.</li> </ol>	ta	84
Introduction to the Theory of Elliptic Functions		88
6. Apron provided with one Line of Sheet Piling. Infinite 1 of Permeable Strata	Depth	98
7. Apron with a Central Cut-off. Limited Depth of Perm Material in the Foundation	neable	101
8. Asymmetrical Cut-off. Limited Depth of Permeable Stra	ata	105
9. Effect of an Impermeable Subsoil on Foundations with H 10. Rectangular (depressed) Apron. Infinite Depth of Perm	ilings ineable	107
Strata		110
11. Rectangular Apron resting on a Limited Depth of Perm Material	neable	114
12. Apron with Two Lines of Symmetrical Pilings. Dep Permeable Layer Unlimited	th of	117
13. Foundation provided with Two Lines of Asymmetrical P	iling	120
14. Foundations with Three Lines of Pilings (Symmetrical)	]	121
S. L. WIII and and a second se		
Section VIII. GRAPHICAL AND EXPERIMENTAL METHODS F	DR	
FLOW NET DIAGRAMS AND SEEPAGE STUDY	•	
I Introductory		194

	miloductory	124
2.	Forchheimer's Method	125
3.	Limitations of Forchheimer's Method	126

vili

CONTENTS	ix
4. The Principle of the Circle Method page	127
5. Comparison of Theoretical Curves	128
6. Tank Experiment for Esna Barrage	130
7. Circle Method as Applied to Free Flow	133
8. The Circle Principle Visualized as a Criterion for Correct	
Computation	134
9. Experimental Methods and Effect of Temperature	135
Section IX. KHOSLA'S SECOND PROBLEM	
1. Empirical Diagrams	141
2. Method of Independent Variables	145
and the first of the state of the second state of the second state of the second state of the second state of the	
Section Y NON-HOMOGENEOUS FIFTERS SUBARTETED	
FOUNDATION MATERIAL	
1 Statement of the Droblem	159
2. Principle of Maximum Discharge	154
2. Effect of Stratification on Flow Lines	158
3. Effect of Stratification of Flow Lifes	100
Section VI PROPERSOD LANE'S PROPLEM_WEIGHTED OPERP	
Section AI. PROFESSOR LANE S PROBLEM - WEIGHTED CREET	
1 Introductow	160
The "Weighted " Croop Theory	169
2. The Weighted Creep Theory	102
Section XII. UNDERGROUND EROSION CONCEPT AND ITS	
EFFECT ON FOUNDATION DESIGN METHODS	164
Part Two. Tail Erosion	167
Section XIII. SOLUTIONS DERIVED FROM EXPERIENCE WITH	
EXISTING WORKS	
1. Introductory	167
2. Two Approaches	167
3. Bligh's Formulæ	168
4. Empirical Erosion Investigation based on Observed Scour Holes	171
5. Tipping Rubble into Scour Holes. Concrete Blocks as Protection	
against Tail Erosion	180
Section XIV. MAIN PRINCIPLES OF REDUCED-SCALE	
HYDRAULIC MODEL EXPERIMENTS	
1. Evolution of the Scale Concept	188
2. Dimensionless Constants	192
3. Elements of the Theory of Dimensional Analysis	200

Section XV. MODEL TESTS AND TAIL EROSION

1.	The Erosive Effect of Vortices	in the Light of the	Information	
	obtained from Model Tests.	Formulæ for Apron	Length and	
	Scour Depth derived from	Model Tests. Fall	Velocity as	
	Scour Parameter		page	201

2.	Alternative	Anti-scour	Devices,	based	on	Model	Tests,	or	on	
	Practice									217

Section XVI. THE STANDING WAVE	
1. Introductory	224
2. General Principle of the Standing Wave	226
3. Types and Dimensions of Standing Waves	232
4. Symbolic Transcriptions and Diagrams	237
5. First Principles of the Application of the Standing Wave as	
Energy Destroyer	242
6. Length of Standing Wave as Element of the Design	243
7. The "Modulus" as a Design Element, and other Design Criteria	245
8. Further Applications of the Standing Wave to Anti-scour	
Design Theory. Pavlovsky-Lane Classification Method	253
9. Standing Wave in Anti-scour Design Methods for Low-head	
Developments	257
10. The Particular Design Rules for the SAF Stilling Basin	262
11. The Standing Wave Interpreted as a Factor affecting the	
Structural Thickness of the Apron	265
Section XVII. EROSION OF SOLID WORK	
1. General Information	266
2. Cavitation	270
Section XVIII. EROSION EXPERIMENTS WITH AIR AS A	
SUBSTITUTE FOR WATER	
Replacing Water by Air	275
SUBJECT INDEX	279
AUTHOD INDEX	202
AUTHOR INDEA	283
