

IMPROVING EFFICIENCY AND RELIABILITY IN WATER DISTRIBUTION SYSTEMS

edited by

ENRIQUE CABRERA

Fluid Mechanics Group, Polytechnic University, Valencia, Spain

and

ANTONIO F. VELA

Fluid Mechanics Group, Jaume I University, Castellón, Spain

Published in cooperation with
Polytechnic University of Valencia
and
Aguas de Valencia

KLUWER ACADEMIC PUBLISHERS
DORDRECHT / BOSTON / LONDON

TABLE OF CONTENTS

Acknowledgements	vii
Preface	ix
Foreword	xi

Fundamentals

1. Modelling water distribution networks: From steady flow to water hammer <i>E. Cabrera, J. García-Serra and P.L. Iglesias</i>	3
2. Water consumption in distribution networks. Short term demand forecast <i>D. Saporta and M. Muñoz</i>	33

Leakage Detection in Networks

3. General overview of unaccounted for water in water distribution systems <i>A.F. Vela, V. Espert and V.S. Fuertes</i>	61
4. Leakage detection in practice. Application to the water distribution of Valencia <i>M. Andrés</i>	97
5. Monitoring water distribution systems. The inverse method as a tool for calibration and leak detection <i>J.A. Liggett and Li-Chung Chen</i>	107

Network Management: Leakage Control

6. Using variable speed pumps to reduce leakage and improve performance <i>D.J. Wood and L.S. Reddy</i>	135
7. Valve control regulation for reducing leakage <i>G. Germanopoulos</i>	165

Managing Water Distribution Systems to Reduce Energy Costs

8. Energy audit of a water system network <i>E. Koelle</i>	191
---	-----

9. Pump scheduling for reducing energy costs
B. Coulbeck 213

Reliability, Risk Analysis and Rehabilitation

10. Analytical and simulation models for reliability analysis in water distribution systems
I. Goulter 235
11. Hydraulic performance and rehabilitation strategies. The use of levels-of-service and performance indices as decision support tools
H. Alegre and S.T. Coelho 267
12. Effects of pipe failures on water distribution networks
P.W. Jowitt 283
13. Optimum design and reliability in water distribution systems
F. Martínez, R. Pérez and J. Izquierdo 303
14. Effect of transient operations on the reliability of hydraulic systems
J.E. Funk 329
15. Reliability and expected use of dynamic devices in a water distribution system
J.P. Tullis 351
16. Water quality modeling in pipe networks
M.H. Chaudhry and M.R. Islam 369
17. Modeling water quality changes in distribution systems: A U.S. perspective
R.M. Clark 395
