

ICE manual of geotechnical engineering

Volume I

Geotechnical Engineering Principles,
Problematic Soils and Site Investigation

Edited by

John Burland

Imperial College London, UK

Tim Chapman

Arup Geotechnics, UK

Hilary Skinner

Donaldson Associates Ltd, UK

Michael Brown

University of Dundee, UK

Contents

Volume I			
Foreword and endorsement	xi		
Preface	xiii		
List of contributors	xv		
SECTION 1: Context	1		
Section Editor: J. B. Burland and W. Powrie			
Chapter 1: Introduction to Section 1	3		
J. B. Burland and W. Powrie			
Chapter 2: Foundations and other geotechnical elements in context – their role	5		
J. B. Burland and T. Chapman			
2.1 Geotechnical elements in the context of the rest of the whole structure	5		
2.2 Key requirements for all geotechnical elements	6		
2.3 Interaction with other professionals	6		
2.4 Design lives for geotechnical elements	7		
2.5 The geotechnical design and construction cycle	8		
2.6 Common factors associated with geotechnical success	9		
2.7 References	10		
Chapter 3: A brief history of the development of geotechnical engineering	11		
J. B. Burland			
3.1 Introduction	11		
3.2 Geotechnical engineering in the early 20th century	11		
3.3 Terzaghi, father of geotechnical engineering	12		
3.4 The impact of soil mechanics on structural and civil engineering	14		
3.5 Conclusions	14		
3.6 References	15		
Chapter 4: The geotechnical triangle	17		
J. B. Burland			
4.1 Introduction	17		
4.2 The ground profile	18		
4.3 The measured or observed behaviour of the ground	18		
4.4 Appropriate model	18		
4.5 Empirical procedures and experience	19		
4.6 Summary of the geotechnical triangle	19		
4.7 Re-visiting the underground car park at the Palace of Westminster	19		
4.8 Concluding remarks	26		
4.9 References	26		
Chapter 5: Structural and geotechnical modelling	27		
J. B. Burland			
5.1 Introduction	27		
5.2 Structural modelling	27		
5.3 Geotechnical modelling	29		
5.4 Comparisons between structural and geotechnical modelling	30		
5.5 Ground–structure interaction	31		
5.6 Conclusions	33		
5.7 References	33		
Chapter 6: Computer analysis principles in geotechnical engineering	35		
D. Potts and L. Zdravkovic			
6.1 General	35		
6.2 Theoretical classification of analysis methods	35		
6.3 Closed form solutions	37		
6.4 Classical methods of analysis	37		
6.5 Numerical analysis	38		
6.6 Overview of the finite element method	40		
6.7 Element discretisation	40		
6.8 Nonlinear finite element analysis	43		
6.9 Modelling of structural members in plane strain analysis	50		
6.10 Some pitfalls with the Mohr–Coulomb model	54		
6.11 Summary	56		
6.12 References	56		
Chapter 7: Geotechnical risks and their context for the whole project	59		
T. Chapman			
7.1 Introduction	59		
7.2 Motivation of developers	59		
7.3 Government guidance on 'optimism bias'	61		
7.4 Typical frequency and cost of ground-related problems	64		
7.5 Expect the unexpected	65		
7.6 Importance of site investigation	65		
7.7 Costs and benefits of site investigation	67		
7.8 Mitigation not contingency	68		
7.9 Mitigation steps	68		
7.10 Example	70		
7.11 Conclusions	70		
7.12 References	72		
Chapter 8: Health and safety in geotechnical engineering	75		
D. Ranner and T. Suckling			
8.1 Introduction	75		
8.2 An introduction to the legislation	75		
8.3 Hazards	76		
8.4 Risk assessment	79		
8.5 References	80		
Chapter 9: Foundation design decisions	83		
A. S. O'Brien and J. B. Burland			
9.1 Introduction	83		

9.2 Foundation selection	83	15.3 Hydrostatic conditions for pore water pressures	163
9.3 A holistic approach to foundation engineering	87	15.4 Artesian conditions	164
9.4 Keeping the geotechnical triangle in balance – ground risk management	90	15.5 Underdrainage	164
9.5 Foundation applications	96	15.6 Conditions above the water table	165
9.6 Conclusions	103	15.7 <i>In-situ</i> horizontal effective stresses	165
9.7 References	104	15.8 Summary	165
		15.9 References	166
Chapter 10: Codes and standards and their relevance	105	Chapter 16: Groundwater flow	167
T. Orr		W. Powrie	
10.1 Introduction	105	16.1 Darcy's Law	167
10.2 Statutory framework, objectives and status of codes and standards	105	16.2 Hydraulic conductivity (permeability)	168
10.3 Benefits of codes and standards	106	16.3 Calculation of simple flow regimes	169
10.4 Development of codes and standards for geotechnical engineering	107	16.4 More complex flow regimes	171
10.5 Why geotechnical and structural codes and standards differ	108	16.5 Groundwater control for stability of excavations	171
10.6 The geotechnical design triangle	111	16.6 Transient flow	173
10.7 Safety elements adopted in Eurocode 7	112	16.7 Summary	173
10.8 Relationship between the geotechnical design triangle and the geotechnical triangle	113	16.8 References	174
10.9 Codes and standards for geotechnical engineering	113		
10.10 Conclusions	123	Chapter 17: Strength and deformation behaviour of soils	175
10.11 References	124	J. B. Burland	
Chapter 11: Sustainable geotechnics	125	17.1 Introduction	175
H. Pantelidou, D. Nicholson and A. Gaba		17.2 Analysis of stress	175
11.1 Introduction	125	17.3 The drained strength of soils	177
11.2 Sustainability objectives – background	125	17.4 The undrained strength of clay soils	181
11.3 Geotechnical sustainability themes	128	17.5 The Mohr–Coulomb strength criterion	183
11.4 Sustainability in geotechnical practice	134	17.6 Choice of strength parameters for analysis and design	184
11.5 Summary	135	17.7 The compressibility of soils	184
11.6 References	135	17.8 The stress–strain behaviour of soils	186
		17.9 Conclusions	191
		17.10 References	193
SECTION 2: Fundamental principles	137	Chapter 18: Rock behaviour	195
Section Editor: W. Powrie and J. B. Burland		D. J. Sanderson	
Chapter 12: Introduction to Section 2	139	18.1 Rocks	195
W. Powrie and J. B. Burland		18.2 Classification of rocks	195
Chapter 13: The ground profile and its genesis	141	18.3 Rock composition	196
M. H. de Freitas		18.4 Porosity, saturation and unit weight	196
13.1 Overview	141	18.5 Stresses and loads	197
13.2 The ground profile	141	18.6 Rock rheology	197
13.3 Importance of a profile	143	18.7 Elasticity and rock stiffness	198
13.4 The formation of a profile	145	18.8 Poroeasticity	200
13.5 Investigating a profile	148	18.9 Failure and rock strength	200
13.6 Joining profiles	150	18.10 Strength testing	202
13.7 Interpreting profiles	150	18.11 Behaviour of discontinuities	203
13.8 Conclusions	151	18.12 Permeability	203
13.9 References	152	18.13 Fracture-controlled permeability	204
Chapter 14: Soils as particulate materials	153	18.14 Rock mass characterisation	204
J. B. Burland		18.15 Rock tunnelling quality index, Q	205
14.1 Introduction	153	18.16 Anisotropy	205
14.2 Phase relationships	153	18.17 References	206
14.3 A simple base friction apparatus	154	Chapter 19: Settlement and stress distributions	207
14.4 Soil particles and their arrangements	156	J. B. Burland	
14.5 The concept of effective stress in fully saturated soils	158	19.1 Introduction	207
14.6 The mechanistic behaviour of unsaturated soils	160	19.2 Total, undrained and consolidation settlement	207
14.7 Conclusions	161	19.3 Stress changes beneath loaded areas	208
14.8 References	161	19.4 Summary of methods of settlement prediction for clay soils	212
		19.5 Elastic displacement theory	214
Chapter 15: Groundwater profiles and effective stresses	163	19.6 Theoretical accuracy of settlement predictions	216
W. Powrie		19.7 Undrained settlement	218
15.1 Importance of pore pressure and effective stress profiles	163	19.8 Settlement on granular soils	218
15.2 Geostatic vertical total stress	163	19.9 Summary	219
		19.10 References	220
		Chapter 20: Earth pressure theory	221
		W. Powrie	
		20.1 Introduction	221
		20.2 Simple active and passive limits	221
		20.3 Effects of wall friction (adhesion)	224

20.4 In-service conditions	225	Chapter 27: Geotechnical parameters and safety factors	297
20.5 Summary	226	J. B. Burland, T. Chapman, P. Morrison and S. Pennington	
20.6 References	226	27.1 Introduction	297
Chapter 21: Bearing capacity theory	227	27.2 Overall consideration of risk	299
W. Powrie		27.3 Geotechnical parameters	300
21.1 Introduction	227	27.4 Factors of safety, partial factors and design parameters	303
21.2 Bearing capacity equation for vertical load – empirical adjustments for shape and depth	227	27.5 Concluding remark	306
21.3 Inclined loading	228	27.6 References	306
21.4 Offset loading	229	SECTION 3: Problematic soils and their issues	309
21.5 Combined vertical, horizontal and moment ($V-H-M$) loading interaction diagram for a surface foundation	229	Section Editor: I. Jefferson	
21.6 Summary	230	Chapter 28: Introduction to Section 3	311
21.7 References	230	I. Jefferson	
Chapter 22: Behaviour of single piles under vertical loads	231	Chapter 29: Arid soils	313
J. B. Burland		A. C. D. Royal	
22.1 Introduction	231	29.1 Introduction	313
22.2 Basic load-settlement behaviour	231	29.2 Arid climates	314
22.3 Traditional approach to estimating the axial capacity of piles in clay	233	29.3 Geomorphology of arid soils and the effect of geomorphic processes on the geotechnical properties of arid soils	315
22.4 Shaft friction of piles in clay, in terms of effective stress	235	29.4 Aspects of the geotechnical behaviour of arid soils	329
22.5 Piles in granular materials	241	29.5 Engineering in problematic arid soil conditions	333
22.6 Overall conclusions	244	29.6 Concluding comments	336
22.7 References	245	29.7 References	337
Chapter 23: Slope stability	247	Chapter 30: Tropical soils	341
E. N. Bromhead		D. G. Toll	
23.1 Factors affecting the stability and instability of natural and engineered slopes	247	30.1 Introduction	341
23.2 Modes and types of failure commonly encountered	248	30.2 Controls on the development of tropical soils	343
23.3 Methods of analysis for slopes, exploring their limitations of applicability	249	30.3 Engineering issues	347
23.4 Rectification of unstable slopes	253	30.4 Concluding remarks	358
23.5 Factors of safety in slope engineering	255	30.5 References	359
23.6 Post-failure investigations	256	Chapter 31: Glacial soils	363
23.7 References	257	B. Clarke	
Chapter 24: Dynamic and seismic loading of soils	259	31.1 Introduction	363
J. Priest		31.2 Geological processes	363
24.1 Introduction	259	31.3 Features of glacial soils	369
24.2 Wave propagation in soil	260	31.4 Geotechnical classification	373
24.3 Dynamic measurement techniques	261	31.5 Geotechnical properties	375
24.4 Dynamic soil properties	262	31.6 Routine investigations	383
24.5 Liquefaction of soils	266	31.7 Developing the ground model and design profile	383
24.6 Summary of key points	267	31.8 Earthworks	386
24.7 References	269	31.9 Concluding comments	387
Chapter 25: The role of ground improvement	271	31.10 References	387
C. D. F. Rogers		Chapter 32: Collapsible soils	391
25.1 Introduction	271	I. Jefferson and C. D. F. Rogers	
25.2 Understanding the ground	272	32.1 Introduction	391
25.3 Removal of water	272	32.2 Where are collapsible soils found?	392
25.4 Improvement of soils by mechanical means	275	32.3 What controls collapsible behaviour?	394
25.5 Improvement of soils by chemical means	277	32.4 Investigation and assessment	398
25.6 References	280	32.5 Key engineering issues	403
Chapter 26: Building response to ground movements	281	32.6 Concluding remarks	407
J. B. Burland		32.7 References	407
26.1 Introduction	281	Chapter 33: Expansive soils	413
26.2 Definitions of ground and foundation movement	281	L. D. Jones and I. Jefferson	
26.3 Classification of damage	282	33.1 What is an expansive soil?	413
26.4 Routine guides on limiting deformations of buildings	283	33.2 Why are they problematic?	413
26.5 Concept of limiting tensile strain	284	33.3 Where are expansive soils found?	414
26.6 Strains in simple rectangular beams	284	33.4 Shrink-swell behaviour	416
26.7 Ground movement due to tunnelling and excavation	287	33.5 Engineering issues	418
26.8 Evaluation of risk of damage to buildings due to subsidence	292	33.6 Conclusions	438
26.9 Protective measures	294	33.7 References	438
26.10 Conclusions	295		
26.11 References	295		

Chapter 34: Non-engineered fills	443	Chapter 41: Man-made hazards and obstructions	555
F. G. Bell, M. G. Culshaw and H. D. Skinner		J. Davis and C. Edmonds	
34.1 Introduction	443	41.1 Introduction	555
34.2 Problematic characteristics	443	41.2 Mining	555
34.3 Classification, mapping and description of artificial ground	444	41.3 Contamination	562
34.4 Types of non-engineered fill	446	41.4 Archaeology	562
34.5 Conclusions	458	41.5 Ordnance and unexploded ordnance (UXO)	563
34.6 Acknowledgements	458	41.6 Buried obstructions and structures	563
34.7 References	458	41.7 Services	564
		41.8 References	564
Chapter 35: Organics/peat soils	463	Chapter 42: Roles and responsibilities	567
E. R. Farrell		J. Cook	
35.1 Introduction	463	42.1 Introduction to site investigation guides	567
35.2 Nature of peats and organic soils	463	42.2 CDM regulations (2007), corporate manslaughter and health and safety	569
35.3 Characterisation of peats and organic soils	465	42.3 Corporate manslaughter	570
35.4 Compressibility of peats and organic soils	467	42.4 Health and safety	570
35.5 Shear strength of peats and organic soils	471	42.5 Conditions of engagement	570
35.6 Critical design issues in peats and organic soils	473	42.6 When should a ground investigation be carried out?	571
35.7 Conclusions	476	42.7 Consultants and ground investigations	572
35.8 References	477	42.8 Underground services and utilities	574
		42.9 Contamination	574
Chapter 36: Mudrocks, clays and pyrite	481	42.10 Footnote	575
M. A. Czerewko and J. C. Cripps		42.11 Disclaimer	575
36.1 Introduction	481	42.12 References	575
36.2 Controls on mudrock behaviour	484		
36.3 Engineering properties and performance	495	Chapter 43: Preliminary studies	577
36.4 Engineering considerations	509	V. Hope	
36.5 Conclusions	512	43.1 Scope of this guidance	577
36.6 References and further reading	513	43.2 Why do a preliminary geotechnical study?	577
		43.3 What goes into a preliminary geotechnical study?	578
Chapter 37: Sulfate/acid soils	517	43.4 Who should write a preliminary geotechnical study?	579
J. M. Reid		43.5 Who should read a preliminary study report?	579
37.1 Introduction and key background information	517	43.6 How to get started: sources of information in the UK	579
37.2 Sulfur compounds in soils and rocks	518	43.7 Using the internet	581
37.3 Sampling and testing for sulfur compounds	523	43.8 The site walkover survey	581
37.4 Specific problems and how to assess them	526	43.9 Writing the report	582
37.5 Conclusions	531	43.10 Summary	582
37.6 References	531	43.11 References	582
		Chapter 44: Planning, procurement and management	585
Chapter 38: Soluble ground	533	T. Chapman and A. Harwood	
T. Waltham		44.1 Overview	585
38.1 Introduction	533	44.2 Planning the ground investigation	585
38.2 Soluble ground and karst	533	44.3 Procuring the site investigation	593
38.3 Influences on the geohazard of limestone karst	534	44.4 Managing the site investigation	598
38.4 Engineering works on soil-covered limestones	536	44.5 References	600
38.5 Engineering works on limestone bedrock	537		
38.6 Ground investigation and assessment of karst	540	Chapter 45: Geophysical exploration and remote sensing	601
38.7 Geohazards on gypsum terrains	541	J. M. Reynolds	
38.8 Geohazards in salt terrains	541	45.1 Introduction	601
38.9 Karst geohazards on sabkha	543	45.2 The role of geophysics	601
38.10 Acknowledgements	544	45.3 Surface geophysics	603
38.11 References	544	45.4 Potential field methods	604
		45.5 Electrical methods	606
SECTION 4: Site investigation	547	45.6 Electro magnetic (EM) methods	607
Section Editor: A. Bracegirdle		45.7 Seismic methods	609
Chapter 39: Introduction to Section 4	549	45.8 Borehole geophysics	614
A. Bracegirdle		45.9 Remote sensing	614
Chapter 40: The ground as a hazard	551	45.10 References	618
J. A. Skipper		Chapter 46: Ground exploration	619
40.1 Introduction	551	J. Davis	
40.2 Ground hazards in the UK	552	46.1 Introduction	619
40.3 Predicting what the ground may have in store	553	46.2 Techniques	619
40.4 Geological maps	553	46.3 Excavation techniques	619
40.5 Conclusions	554	46.4 Probing techniques	620
40.6 References	554	46.5 Drilling techniques	620
		46.6 <i>In situ</i> testing in boreholes	623

46.7 Monitoring installations	624	49.3 The parameters and associated test types	668
46.8 Other considerations	626	49.4 Index tests	668
46.9 Standards	626	49.5 Strength	670
46.10 References	627	49.6 Stiffness	674
Chapter 47: Field geotechnical testing	629	49.7 Compressibility	677
J. J. M. Powell and C. R. I. Clayton		49.8 Permeability	679
47.1 Introduction	629	49.9 Non-standard and dynamic tests	679
47.2 Penetration testing	630	49.10 Test certificates and results	680
47.3 Loading and shear tests	640	49.11 Sampling methods	681
47.4 Groundwater testing	648	49.12 Bulk samples	682
47.5 References	650	49.13 Block samples	682
Chapter 48: Geo-environmental testing	653	49.14 Tube samples	682
N. Langdon, C. Lee and J. Strange		49.15 Rotary core samples	684
48.1 Introduction	653	49.16 Transport	685
48.2 Philosophy	653	49.17 The testing laboratory	685
48.3 Sampling	654	49.18 References	686
48.4 Testing methods	656	Chapter 50: Geotechnical reporting	689
48.5 Data processing	659	H. Scholes and P. Smith	
48.6 Quality assurance	661	50.1 Factual reporting	689
48.7 References	663	50.2 Electronic data	693
Chapter 49: Sampling and laboratory testing	667	50.3 Interpretative reporting	695
C. S. Russell		50.4 Other geotechnical reports	695
49.1 Introduction	667	50.5 Reporting production and timescale	696
49.2 Construction design requirements for sampling and testing	667	50.6 References	697
		Index to volume I	699
