Preface	page	vii
Acknowledgements		ix
List of tables		xvii
1 Offshore resource development		1
1.1 Ocean resources		1
1.2 Offshore oil and gas		4
1.3 Types of offshore structure		7
1.3.1 Hydrocarbon production		7
1.3.2 Piled platforms		9
1.3.3 Gravity platforms		11
1.3.4 Compliant structures		15
1.3.5 Jack-up rigs		15
1.3.6 Offshore structures for Arctic conditions		17
1.3.7 Other offshore structures		19
1.3.8 Oil production in deep waters		20
1.4 Design considerations for offshore structures		22
1.5 Marine geotechnical engineering problems		24
2 The nature of submarine soils		31
2.1 Topographical features of the sea floor		31
2.2 Origin, classification and distribution of marine sediments		34
2.2.1 Lithogenous sediments		39
2.2.2 Biogenous sediments		41
2.2.3 Distribution of sediments		46
2.3 <i>In-situ</i> stress state in submarine deposits		48
2.3.1 Possible mechanisms of overconsolidation		49
2.3.2 Possible mechanisms of incomplete consolidation		51
2.4 Inorganic clay deposits		56
2.4.1 Introduction		56
2.4.2 Index properties		57
2.4.3 Shear strength		60
2.4.4 Consolidation properties		66
2.4.5 Deformation parameters		70
2.5 Calcareous sediments		74

CONTENTS

2.5.1	Typical geotechnical profiles	74
2.5.2	Classification	74
2.5.3	Shear strength properties	77
2.5.4	Consolidation properties	83
2.5.5	Deformation parameters	84
2.6	Siliceous sediments	86
3	Soil behaviour under cyclic loading	90
3.1	Introduction	90
3.2	Concepts of cyclic behaviour of soils	92
3.2.1	Critical state concepts for monotonic loading	92
3.2.2	Extension of critical state concept to cyclic loading	95
3.2.3	Undrained cyclic loading of contractive soils	97
3.2.4	Undrained cyclic loading of dilative soils	100
3.2.5	Effects of drainage	103
3.3	Approaches to analysis of response of soils to cyclic loading	106
3.3.1	Constitutive models	107
3.4	Laboratory test procedures for cyclic soil response	110
3.5	Factors affecting laboratory test results	114
3.5.1	Type of test	114
3.5.2	Method of sample preparation	117
3.5.3	Effects of sample reconstitution	119
3.5.4	Other factors	120
3.6	Practical approaches for sands	125
3.6.1	Liquefaction potential	126
3.6.2	Undrained excess pore pressures	129
3.6.3	Cyclic stiffness and damping	131
3.6.4	Permanent strains	136
3.7	Practical approaches for clays	138
3.7.1	Undrained shear strength	138
3.7.2	Undrained pore pressures	141
3.7.3	Cyclic stiffness and damping	143
3.7.4	Permanent strains	148
4	Marine geotechnical investigations	150
4.1	Phases of the investigation	150
4.2	Geophysical survey	152
4.2.1	Introduction	152
4.2.2	Bathymetry	153
4.2.3	Seafloor topography	154
4.2.4	Vertical profiling	156
4.3	Drilling and sampling procedures	157
4.3.1	Investigation vessel and drilling system	157
4.3.2	Shallow penetration sampling	159

CONTENTS

4.3.3	Deep sampling	159
4.4	<i>In-situ</i> testing techniques	164
4.4.1	Vane shear test	166
4.4.2	Cone penetration test	168
4.4.3	Pressuremeter test	184
4.4.4	Other tests	187
4.5	Laboratory testing	189
4.5.1	Sampling disturbance	189
4.5.2	Onboard laboratory testing	192
4.5.3	Onshore laboratory testing	193
5 Foundations for offshore gravity structures		204
5.1	Introduction	204
5.2	Construction, installation and instrumentation of gravity platforms	205
5.2.1	Construction	205
5.2.2	Installation	208
5.2.3	Instrumentation	209
5.3	Stability analysis	210
5.3.1	Introduction	210
5.3.2	Design storm loading	213
5.3.3	Simplified analysis	214
5.3.4	Limiting equilibrium analysis	220
5.3.5	Shear strength for stability analysis	221
5.3.6	Effect of consolidation	223
5.3.7	Centrifuge testing	226
5.4	Deformation analysis	228
5.4.1	Introduction	228
5.4.2	Analysis based on elastic theory	229
5.4.3	Finite element analysis	233
5.4.4	Evaluation of dynamic response	238
5.5	Piping and erosion	241
5.6	Predicted and observed performance	242
5.6.1	Installation phase	243
5.6.2	Settlements under operational conditions	246
5.6.3	Base contact stresses under operational conditions	247
5.6.4	Pore pressures	250
6 Foundations for jack-up rigs		251
6.1	Introduction	251
6.2	Foundation types and design loads	252
6.2.1	Individual footings	252
6.2.2	Foundation mats	254
6.2.3	Design loads	255

CONTENTS

6.2.4	Preloading	255
6.3	Prediction of individual footing performance	257
6.3.1	Footing failure modes	257
6.3.2	Geotechnical investigation	258
6.3.3	Bearing capacity analysis	258
6.3.4	Other considerations	265
6.3.5	Case histories	266
6.4	Prediction of mat footing performance	267
6.4.1	Bearing capacity calculations	268
6.4.2	Sliding resistance	268
6.4.3	Long-term settlements	268
6.4.4	Effects of seafloor instability	269
6.4.5	Mat bending moments	270
7	Offshore pile foundations	271
7.1	Introduction	271
7.2	Types of offshore piles	272
7.2.1	Driven piles	272
7.2.2	Bored piles	274
7.3	Temporary support of piled structures	275
7.3.1	Jacket leg extension design	276
7.3.2	Bearing capacity of horizontal bracing and mud mats	277
7.4	Dynamic analysis of pile-driving	278
7.4.1	Wave equation analysis	278
7.4.2	Typical applications	282
7.4.3	More refined analyses	283
7.4.4	Dynamic pile testing	284
7.5	Axial load capacity	285
7.5.1	Introduction	285
7.5.2	Evaluation of skin friction	287
7.5.3	Evaluation of end-bearing capacity	296
7.5.4	Group effects	297
7.5.5	Effects of cyclic loading	299
7.6	Axial deformation analysis	308
7.6.1	Single piles	308
7.6.2	Pile groups	317
7.6.3	Cyclic loading effects	321
7.7	Lateral loading	322
7.7.1	Introduction	322
7.7.2	Ultimate lateral resistance	323
7.7.3	Deflection of single piles	327
7.7.4	Cyclic loading effects	330
7.7.5	Deflection of pile groups	333
7.7.6	Pile groups subjected to axial and lateral loads	335
7.7.7	Soil parameters	335
7.8	Dynamic response	338

CONTENTS

7.8.1	Introduction	338
7.8.2	Single piles	338
7.8.3	Pile groups	339
8	Seafloor stability	344
8.1	Causes of seafloor instability	344
8.1.1	Introduction	344
8.2	Geological features of submarine slides	346
8.2.1	Classification of slides	346
8.2.2	Types of deformational features	347
8.2.3	Run-out distance of slides	352
8.3	Mechanisms of instability	353
8.3.1	Gravity forces	353
8.3.2	Hydraulic forces	355
8.3.3	Earthquakes and tectonic activity	356
8.4	Analyses of slope stability	357
8.4.1	Limit equilibrium methods	357
8.4.2	Continuum analyses	358
8.4.3	Finite element analysis	358
8.5	Slope stability under gravity forces	359
8.5.1	Undrained analysis	360
8.5.2	Drained analysis	360
8.5.3	Partially drained analysis	362
8.6	Slope stability under wave forces	364
8.6.1	Wave-induced bottom pressures	365
8.6.2	Wave-induced stresses within the sea bed	369
8.6.3	Transient wave-induced pore pressures	372
8.6.4	Residual wave-induced pore pressures	376
8.6.5	Limit equilibrium analysis of slope stability	382
8.6.6	Simplified total stress analysis of stability	386
8.6.7	Simplified evaluation of wave-induced liquefaction	386
8.7	Earthquake effects	392
8.7.1	Introduction	392
8.7.2	Limit equilibrium analysis of slope stability	393
8.7.3	Evaluation of liquefaction potential	395
8.7.4	Effective stress analysis of liquefaction potential	400
8.8	Effects of soil instability on piles	405
8.8.1	Introduction	405
8.8.2	Estimation of soil movements	405
8.8.3	Analysis of lateral pile-soil interaction	407
8.8.4	Solutions for lateral pile deflections and moments	409
8.8.5	Axial forces on piles	412
8.9	Submarine pipelines	413
8.9.1	Determination of constraints	413
8.9.2	Routing reconnaissance	415
8.9.3	Analysis of the pipeline	415

CONTENTS

8.9.4 Performance, cost and decision analysis	416
8.9.5 Final design and installation	420
8.10 Seabed anchors	421
8.10.1 Types and functions of anchors	421
8.10.2 Load capacity of anchors	423
8.10.3 Anchor movements	429
References and bibliography	437
Index	465
