Contents

REFACE	VII
NTRODUCTION	IX
SOIL AS A MATERIAL OF DAM BODY	
1.1 Classification of soil, grain-size distribution and basic	and a street.
physico-mechanical properties	
1.2 Soil permeability	Set Bonne 2-1.5.8
1.3 Volume change of soil	10
1.4 Form change	16
1.5 Condition of soil strength	35
1.6 Primary dynamic properties of soil	45
1.7 Selection of soil properties for dam body	46
SEEPAGE IN EARTH DAMS	51
2.1 Foundations of seepage theory	51
2.2 Determination of seepage parameters in earth dams	59
2.3 Seepage strength of soil	70
2.4 Drainage and filters	80
CONSOLIDATION OF SOIL IN DAM BODY AND FOUN	JDATION 89
3.1 Theoretical background	89
3.2 Basic relationships of the theory of consolidation	92
3.3 Solutions of the theory of consolidation	98
3.4 Design guidelines	110
STRESS-STRAIN STATE AND STRENGTH OF DAM SO	L 111
4.1 Variational-difference calculus in stress-strain problems of	f earth dams 112
4.2 Finite element method combined with the method of loc	al
variations (plane strain problem)	115
4.3 Finite element method combined with method of local	A DECEMBER OF
variations (spatial problem)	125
4.4 Results of solutions to stress strain problems for earth da	ims 131

VI Design of earth dams

	4.5 Utilization of stress-strain computations in dam design	151
5	SEISMIC STABILITY OF EARTH DAMS	154
	5.1 Some remarks on earthquakes	154
	5.2 Types of seismic waves and scales of seismicity	156
	5.3 Dynamic method of stress-strain computations for earth dams	
	(explicit scheme, variation-difference version)	163
	5.4 Dynamic method of stress-strain computations for earth dams	
	(implicit scheme in finite element method)	169
	5.5 Static (quasidynamic) method of seismic computations	192
	5.6 Seismic effects in design schemes and seismic prevention measures	199
6	5 SLOPE STABILITY	
	6.1 Stability computations for circular cylindric slip surface	205
	6.2 Assessment of local slope stability	211
	6.3 Mozhevitinov's method of oblique forces	214
	6.4 Recommendations on the use of slope stability assessment methods	217
7	DAM-FOUNDATION TRANSITIONS	218
	7.1 Seepage prevention measures in dam foundation	218
	7.2 Grout curtains in dam foundation	229
	7.3 Dissolution of salted soil in body and foundation of hydraulic	
	engineering structures	231
	7.4 Selection of underground contour	238
	Selection of son properties for data addy	
8	DAM DESIGN USING EARTH MATERIALS	240
	8.1 General design guidelines	240
	8.2 Earthfill dams	241
	8.3 Hydraulic-fill earth dams	248
	8.4 Earth-rockfill dams	254
	8.5 Earth dams with nonsoil seepage prevention components	
	(rockfill dams)	262
	8.6 Earth dams constructed by controlled blasting	275
	8.7 Dams constructed in the Far North	284
	8.8 Selection of earth dam type	296
9	OPTIMUM DESIGN OF EARTH DAMS BY FACTOR ANALYSIS	299
	9.1 Concept of dam design factors	299
	9.2 Factor analysis in design of earth dams; method of complete	
	factor experiment	300
	9.3 Method of fractional factor analysis	309
	9.4 Search for optimum structure	310
	9.5 Application of factor analysis in optimization of structures	314
D	EFEDENCES	220
