

DEVELOPMENTS IN GEOTECHNICAL ENGINEERING 50

EARTH ANCHORS

BRAJA M. DAS

*Department of Civil Engineering and Mechanics, Southern Illinois University at
Carbondale, Carbondale, IL 62901-6603, U.S.A.*

ELSEVIER

Amsterdam — Oxford — New York — Tokyo 1990

CONTENTS

Preface

VII

Chapter 1

Anchors-General **1**

- 1.1 Introduction 1
- 1.2 Plate Anchors 2
- 1.3 Direct Embedment Anchors 4
- 1.4 Helical Anchors 4
- 1.5 Grouted Anchors 10
- 1.6 Anchor Piles and Drilled Shafts 11
- 1.7 Coverage of the Text 11
- References 13

Chapter 2

Horizontal Plate Anchors **14**

- 2.1 Introduction 14
- 2.2 Early Theories 16
 - Recent Solutions for Anchors in Sand 19
- 2.3 Net Ultimate Uplift Capacity 19
 - 2.3.1 Balla's Theory 19
 - 2.3.2 Baker and Kondner's Empirical Relationship 23
 - 2.3.3 Mariupol'skii's Theory 23
 - 2.3.4 Meyerhof and Adams' Theory 26
 - 2.3.5 Veesaert and Clemence's Theory 36
 - 2.3.6 Vesic's Theory 38
 - 2.3.7 Saeedy's Theory 43
 - 2.3.8 Discussion of Various Theories 45
- 2.4 Load-Displacement Relationship 50

2.5	Anchors Subjected to Repeated Loading	55
2.6	Uplift Capacity of Shallow Group Anchors	59
2.7	Spread Foundations Under Uplift	61
2.8	Inclined Load Resistance of Horizontal Plate Anchors	62
	Anchors in Clay ($\phi = 0$ Condition)	66
2.9	Ultimate Uplift Capacity	66
	2.9.1 Theory of Vesic	66
	2.9.2 Theory of Meyerhof	69
	2.9.3 Theory of Das	71
2.10	Factor of Safety	78
2.11	Uplift Capacity of Anchors in Layered Soil	78
	References	81

Chapter 3

Vertical Plate Anchors

84

3.1	Introduction	84
	Anchors in Sand	86
3.2	Ultimate Holding Capacity from Rankine's Theory	86
3.3	Recent Development on Shallow Vertical Anchors in Sand	89
	3.3.1 Analysis of Ovesen and Stromann	89
	3.3.2 Analysis of Meyerhof	98
	3.3.3 Analysis of Biarez, Boucraut and Negre	98
	3.3.4 Analysis of Neely, Stuart and Graham	100
3.4	Nature of Passive Pressure Distribution in Front of a Shallow Vertical Anchor	108
3.5	Deep Vertical Anchor	108
3.6	Load-Displacement Relationship	114
3.7	Design Considerations	117
3.8	Effect of Anchor Inclination	124
	Anchors in Clay (Undrained Cohesion, $\phi = 0$)	125
3.9	Ultimate Holding Capacity	125
3.10	Step-by-Step Procedure for Estimation of Ultimate Load	131
3.11	Limitations of the Existing Study	132
	References	133

Chapter 4

Inclined Plate Anchors

135

4.1	Introduction	135
	Inclined Plate Anchors in Sand	136

4.2	Inclined Anchors--Axisymmetric Case (Analysis of Harvey and Burley)	136
4.3	Meyerhof's Procedure	139
4.4	Analysis of Hanna et al.	146
4.5	Other Empirical Relationships	154
4.6	General Remarks	159
	Inclined Plate Anchors in Clay ($\phi = 0$ Condition)	161
4.7	Ultimate Holding Capacity	161
	References	167

Chapter 5

Helical Anchors

169

5.1	Introduction	169
	Helical Anchors in Sand	169
5.2	Geometric Parameters and Failure Mode	169
5.3	Net Ultimate Uplift Capacity for Shallow Anchor Condition	174
5.4	Net Ultimate Uplift Capacity for Deep Anchor Condition	182
5.5	Interference of Closely-Spaced Anchors	185
	Helical Anchors in Clay ($\phi = 0$ Condition)	185
5.6	Failure Mode in Soil	185
5.7	Net Ultimate Uplift Capacity	186
5.8	Use of <i>In Situ</i> Tests to Predict Uplift Performance	191
	References	192

Chapter 6

Anchor Piles

193

6.1	Introduction	193
	Piles in Sand	196
6.2	Bored Piles	196
6.3	Driven Piles	205
6.4	Uplift Capacity of Inclined Piles Subjected to Axial Pull	207
6.5	Uplift Capacity of Rigid Vertical Piles Under Oblique Pull	214
6.6	Uplift Capacity of Group Piles	220
6.7	Factor of Safety	223
	Piles in Clay ($\phi = 0$ Condition)	224
6.8	Vertical Piles Subjected to Axial Pull	224
6.9	Load-Displacement Relationship for Vertical Piles Subjected to Axial Uplift	227

6.10	Inclined Piles Subjected to Axial Pull	229
6.11	Uplift Capacity of Vertical Piles Subjected to Inclined Pull	230
6.12	Uplift Capacity of Group Piles in Clay	231
	References	234
	Index	237
