FOREWORD . . . vii

INTRODUCTION . . . 1

PART I. MATRIX METHODS FOR STABILITY ANALYSIS OF BUTTRESS DAMS

CHAPTER 1. BRIEF OUTLINE OF THE THEORY OF MATRIX ANALYSIS AND CERTAIN SPECIAL MATRICES . . . 7

1.1. Fundamental Principles and Definitions . . . 7

1.2. Special Matrices Used in Smirnov's Theory . . . 13

a. Bending moment coefficient matrices . . . 13

b. Elastic load matrices . . . 16

CHAPTER 2. TYPES OF BUTTRESS DAMS AND METHODS OF ANALYZING THEIR STABILITY . . . 22

2.1. Structural Features of Buttress Dams . . . 22

2.2. Elementary Methods of Stability Analysis of Buttress Dams . . . 25

a. Chambaud's method . . . 26

b. Rozanov's method . . . 27

CHAPTER 3. MATRIX METHODS OF SOLVING IDEALIZED PROBLEMS OF THE STABILITY OF BUTTRESS DAMS AGAINST BUCKLING . . . 29

3.1. Solving the Problem of the Stability of a Buttress with Bracing Struts by Substituting for the Elemental Strip a

Symmetrically Loaded Bar of Double the Length (Scheme 1) . . . 29

a. Derivation of buttress stability equations . . . 29

b. Determination of stiffness coefficients of bracing struts and rotational stiffnesses of their connections with buttresses . . . 38

c. Compressive load distribution diagram . . . 40

3.2. Solving the Idealized Problem of the Stability of a Buttress, Considering the Elasticity at the Base . . . 41

3.3. Generalized Version of Solution of Idealized Problem of the Stability of a Buttress (Scheme 2) . . . 44

a. Derivation of stability equations . . . 44

b. Consideration of elasticity at the base . . . 50

3.4. Derivation of Approximate Formulas for Critical Loads for a Buttress of Constant Thickness Having No Bracing Struts . . . 51

CHAPTER 4. STABILITY OF HOLLOW, UNIFORM-STRENGTH, ANCHORED AND THROUGH BUTTRESSES . . . 55

4.1. Solution of the Idealized Problem of the Stability of Hollow Buttresses . . . 55

a. Hollow buttresses with horizontal stiffening slabs . . . 55

b. Hollow buttresses with inclined stiffening slabs . . . 59

c. Hollow (double-walled) buttresses without internal diaphragms . . . 61

4.2. Stability of Buttresses of Uniform Strength . . . 63

4.3. Stability of Anchored Buttresses . . . 68

4.4. Stability of Through Type Buttresses . . . 71

a. Slab and column type buttresses with inclined columns . . . 72

b. Reinforced concrete lattice type buttresses of the triangular lattice frame type (Ladygin's system) . . . 79

CHAPTER 5. EXAMPLES OF STABILITY ANALYSIS OF BUTTRESS DAMS BY APPROXIMATE METHODS . . . 85

5.1. Stability of High Reinforced Concrete Buttress Dam with Split Slab Deck . . . 85

a. Buttress of varying thickness without stiffening elements . . . 85

b. Buttress of varying thickness with stiffening ribs . . . 88

c. Buttress of varying thickness with bracing struts . . . 90

5.2. Stability of High Reinforced Concrete Buttress Dam with Split Slab Decks, Considering Elasticity at the Base . . . 95

CHAPTER 6. THREE-DIMENSIONAL STABILITY ANALYSIS OF BUTTRESS DAMS USING DISCRETE SYSTEMS . . . 100

6.1. Statement of the Problem of the Three-Dimensional Stability of Buttresses with Bracing Struts . . . 100

6.2. Development of Basic Relationships for the Discrete System . . . 101

a. Equations of principal loads . . . 103

b. Resolution of unit forces applied to the intersecting strips at points of intersection with strip I in the principal direction . . . 107

c. Resolution of unit forces applied to the intersecting strips at points of intersection with strip II in the principal direction . . . 109

d. Resolution of unit forces applied to the intersecting strips at points of intersection with strip III in the principal direction . . . 109

e. Stiffness coefficients of strips in the principal direction . . . 110

f. Stiffness coefficients of elastic supports (intersecting strips) of equivalent strip in the principal direction . . . 110

6.3. Derivation of Equations for Analysis of Continuous Buttresses without Bracing Struts . . . 120

a. Resolution of unit loads $R_{31}=1$, $R_{21}=1$ and $R_{11}=1$, applied to intersecting strips at the points of intersection with strip in the principal direction I . . . 120

b. Computation of stiffness coefficients of strips in the principal direction . . . 123

c. Determination of resultant stiffness coefficients of elastic supports of equivalent strip in the principal direction . . . 124

6.4. Derivation of Equations to Determine Reactions of Elastic Supports of Intersecting Strips . . . 128

6.5. Equations for Calculating Unit Displacement of the Elements of a Mutually Intersecting System . . . 130

6.6. Stability Analysis of 'Equivalent' Buttress under Different End Conditions . . . 130

a. Equivalent buttress with hinged ends . . . 130

b. Equivalent buttress with elastically or rigidly fixed lower end and hinged upper end . . . 136

c. Equivalent buttress with both ends elastically or rigidly fixed . . . 141

CHAPTER 7. AN EXAMPLE OF THREE-DIMENSIONAL STABILITY ANALYSIS OF A BUTTRESS BY THE METHOD OF MUTUALLY INTERSECTING BARS . . . 147

7.1. Derivation of Formulas for Three-Dimensional Stability Analysis of the Model of a Buttress Dam Used for Tests by Rozanov . . . 147

7.2. Stability Analysis of Equivalent Buttress of Model Dam Using Scheme 1 . . . 163

7.3. Comparison of the Results of Theoretical Three-Dimensional Analysis with Experimental Data . . . 167

PART II. MATRIX METHODS FOR SEISMIC ANALYSIS OF BUTTRESS DAMS

CHAPTER 8. ANALYSIS OF BUTTRESS DAMS FOR SEISMIC FORCES DIRECTED ALONG THE GORGE . . . 171

8.1. Present Status of the Problem of Seismic Resistance of Buttress Dams . . . 171

8.2. Dynamic Method of Determining Seismic Loads . . . 173

8.3. Unified Method of Studying the Free Vibrations of Buttresses of Dams with Round-Head, Multiple-Arch or Flat-Slab Decks, along the Gorge . . . 175

8.4. Analysis of Free Vibrations of a Buttress Considering Elasticity at the Base . . . 187

8.5. Additional Remarks on the Dynamic Analysis of Buttress Dams with Multiple-Arch and Flat-Slab Decks . . . 193

8.6. Free Vibrations of the Buttress-Wedge in Its Own Plane . . . 197

a. Determination of the natural frequency of a wedge considering deformations due to bending . . . 197

b. Determination of the natural frequency of a wedge considering deformations due to bending and shear simultaneously . . . 201

8.7. Analysis of a Buttress-Wedge of Varying Thickness . . . 206

CHAPTER 9. ANALYSIS OF BUTTRESS DAMS FOR SEISMIC FORCES DIRECTED ACROSS THE GORGE (LATERAL SHOCKS) . . . 210

9.1. Free Vibrations of a Buttress with Bracing Struts, Neglecting the Effect of the Deck . . . 210

9.2. Free Vibrations of a Buttress without Bracing Struts . . . 212

9.3. Dynamic Schemes for Analysis of Buttresses of Multiple-Arch Dams . . . 213

9.4. Free Vibrations of Independent Round-Head Buttresses . . . 214

9.5. Consideration of Elasticity at the Base when Determining the Natural Frequency of Vibrations of a Buttress across the Gorge . . . 215

9.6. Analysis of Symmetrical (or Near-Symmetrical) Buttresses for Lateral Shocks Using the Cantilever Dynamic Scheme . . . 216

9.7. Free Vibrations of the Buttress across the Gorge Considering the Effect of the Deck (Statically Indeterminate Schemes) . . . 217

9.8. Approximate Formulas for Determining the Fundamental Natural Frequencies of Continuous and Through Type Buttresses . . . 219

9.9. Discrete Method of Determining Frequencies and Modes of Free Vibrations of the Walls of Massive Buttress Dams . . . 227

CHAPTER 10. ANALYSIS OF REAL MASSIVE BUTTRESS DAMS WITH HOLLOW BUTTRESSES FOR SEISMIC EFFECTS . . . 230

10.1. Initial Data . . . 230

10.2. Determination of the Natural Frequency of Vibrations of the Section of the Dam in Its Own Plane (along the Gorge) Considering Fixity at the Base . . . 230

10.3. Determination of the Natural Frequency of Vibrations of the Section of the Dam in Its Own Plane, Considering Elasticity at the Base . . . 236

a. When $E_{os} = E_{pl}$ . . . 236

b. When $E_{os} = 1.2\, E_{pl}$ . . . 239

10.4. Determination of the Natural Frequency of the Sections of the Dam Considering the Compressive Load and the Elasticity at the Base . . . 239

10.5. Determination of the Stresses in the Section of the Dam due to Seismic Forces Directed along the Gorge . . . 243

a. Determination of coordinates of eigenvectors . . . 243

b. Determination of seismic forces . . . 244

c. Determination of seismic stresses . . . 248

10.6. Determination of the Natural Frequency of Independent Sections of the Dam across the Gorge, Considering Fixity at the Base . . . 253

10.7. Determination of the Natural Frequency of Sections of the Dam across the Gorge, Considering Elasticity at the Base . . . 256

a. Case where $E_{os} = E_{pl}$ . . . 256

b. Case where $E_{os} = 0.2\, E_{pl}$ . . . 258

10.8. Determination of the Stresses in the Section of the Dam due to Seismic Forces Directed across the Gorge . . . 259

10.9. Determination of Frequencies and Modes of Free Vibrations of the Walls (Slabs) of Buttresses . . . 262

a. Formulation of the initial matrices . . . 262

b. Computation of natural frequencies and coordinates of eigenvectors . . . 266

10.10. Some Considerations Arising out of Theoretical Seismic Analyses of Real Massive Buttress Dams . . . 269
