

Series on Rock and Soil Mechanics
Vol. 10 (1985)

FIELD INSTRUMENTATION IN GEOTECHNICAL ENGINEERING

Thomas H. Hanna

B. Sc., Ph. D., C. Eng., F.I.C.E.

Professor of Civil and Structural Engineering
University of Sheffield
England

First Edition 1985

TRANS TECH PUBLICATIONS

CONTENTS

Preface	1
Abbreviations of Units	6
List of Abbreviations	6
Table of Conversions	8
List of Symbols	9

Chapter 1

Introduction to Ground Engineering and the Monitoring of Foundations

1.1 Introduction	17
1.2 Soil and Rock Occurrence and the Influence of Geology	18
1.3 Site Investigation	21
1.4 The Behaviour of Soil and Rock under Load	27
1.5 Ground Problems in Civil Engineering — A Review	32
1.5.1 Foundations	32
1.5.2 Soil and Rock as a Construction Material	35
1.5.3 Underground Structures	38
1.5.4 Earth Retaining Structures	40
1.5.5 Slopes and Excavations	43
1.5.6 Ground Reinforcement	45
1.5.7 Geotechnical Processes	46
1.5.8 Offshore Engineering	46
1.5.9 Earthquake Engineering	47
1.5.10 Structures on Waste Materials	47
1.5.11 Special Problems	47
1.6 The Principles of Foundation Design	49
1.7 Limitations in the Present Methods of Design	52
1.8 The Role of Field Measurement in Design and Construction	54
1.9 The Need for Instrumentation in Geotechnical Engineering	55
1.10 Comments	58
1.11 Corrosion in Ground Engineering	61
1.12 A Strategy for Instrumentation	62

Chapter 2

The Measurement of Load	63
2.1 Introduction	63
2.2 Load Rings	64
2.3 Mechanical Load Cell	66
2.4 Mechanical Disc	68

2.5	Indirect Methods of Load Measurement.....	71
2.6	Photoelastic Load Indicator.....	72
2.7	"Strain-Gauged" Load Cell.....	75
2.8	Load Sensing Bolts and Struts.....	81
2.9	Load Sensing Washers.....	85
2.10	Strain-Gauged Roof Bolt.....	85
2.11	Hydraulic Pressure Load Cell.....	86
2.12	Vibrating-Wire Type Load Cell.....	90
2.13	Rock Bolt Load Cell — Vibrating-Wire Type.....	100
2.14	Shear and Normal Load Cell.....	101
2.15	Other Methods of Load Measurement.....	102
2.16	Special Load Cells.....	104
2.17	Load Control Cells.....	106
2.18	Pile Driving Instrumentation.....	107
2.19	The Selection, Installation and Use of Load Cells.....	116

Chapter 3

Pore Water Pressure Measurement Devices.....	121	
3.1	Introduction.....	121
3.2	The Effective Stress Principle.....	122
3.3	Soil Suction.....	125
3.4	General Requirements of Water Pressure Measuring Instruments.....	125
3.5	Piezometer Time Lag.....	127
3.6	Calculation of Time Lag.....	135
3.7	Intake Factors.....	136
3.8	The Standpipe Piezometer.....	136
3.9	The Casagrande Porous Tube Piezometer.....	138
3.10	Pressure Gauges.....	143
3.11	Manometers.....	145
3.12	Air and Water Pressures in Partly Saturated Soil.....	145
3.13	High Air Entry Piezometer Tip.....	148
3.14	Hydraulic Piezometer.....	149
3.15	Pneumatic Piezometer.....	151
3.16	Vibrating-Wire Type Piezometer.....	155
3.17	Cone Piezometer.....	158
3.18	Piezometer for Use at a Boundary.....	162
3.19	Piezometer for Use in Earth Fill.....	168
3.20	Coarse Porous Tip Piezometer.....	171
3.21	Negative Pore Water Pressure Measurement.....	173
3.22	Piezometer Installation.....	174
3.23	Piezometer Sealing.....	176
3.24	De-Airing of Piezometers and Piezometer Lines.....	179
3.25	Methods of Recording.....	182

3.26	Winterizing Piezometers.....	185
3.27	Protection of Piezometers.....	187
3.28	Relative Advantages of Different Piezometer Systems.....	189
3.29	Sources of Error.....	190
3.30	The Longevity of Pore Water Pressure Measuring Devices.....	192
3.31	Tensiometers.....	193
3.32	Leakage Detection by Piezometers.....	197
3.33	Seepage Measurement.....	201
3.34	The Differential Piezometer.....	202

Chapter 4

	The Measurement of Total Pressures.....	205
4.1	Introduction.....	205
4.2	Diaphragm Pressure Cell Design Requirements.....	206
4.3	Electrical Earth Pressure Cells.....	211
4.4	Piezoelectric and Piezoresistive Pressure Cells.....	213
4.5	The TRRL Pressure Cell.....	214
4.6	Vibrating-Wire Earth Pressure Cells.....	215
4.7	A Design Approach for Free-Diaphragm Earth Pressure Cells...	218
4.8	Pneumatic/Hydraulic Earth Pressure Cells.....	221
4.9	Installation of Pneumatic/Hydraulic Earth Pressure Cells.....	223
4.10	Installation of Pneumatic/Hydraulic Earth Pressure Cells in Rock or Concrete.....	225
4.11	Measurement of Total Stress on Face of a Diaphragm Wall....	225
4.12	The Action Factor of Hydraulic/Pneumatic Earth Pressure Cells.....	227
4.13	The Carlson Stress Meter.....	228
4.14	Normal and Shear Stress Measurement.....	229
4.15	Indirect Methods of Earth Pressure Measurement.....	234
4.16	Determination of the State of Stress in a Soil Mass.....	236
4.17	<i>In-situ</i> Stresses in Soils.....	237
4.18	<i>In-situ</i> Stress Measurement.....	239
4.19	<i>In-situ</i> Stress Determination by Pressuremeter.....	240
4.20	Earth Pressure Measurement with Hydraulic Piezometers.....	243
4.21	<i>In-situ</i> Stresses in Rocks.....	247
4.22	Rock Pressure Measurement.....	248
4.23	Overcoring.....	251
4.24	Stress Measurement Using Hydraulic Fracturing.....	254
4.25	Measurement of Stress Changes in Rock.....	254
4.26	The Flat-Jack Test.....	255
4.27	Pressuremeter Testing in Rocks.....	256
4.28	The Longevity and Reliability of Earth Pressure Cells.....	257

Chapter 5	
Instruments for Ground Movement Measurement	261
5.1 Introduction	261
5.2 Surface Monuments.....	261
5.3 Levelling Stations.....	263
5.4 Sub-Surface Reference Points.....	266
5.5 Bench Marks.....	267
5.6 Surveying Methods.....	267
5.7 Inverted and Hanging Pendulums.....	278
5.8 Single Point Hydraulic Pneumatic Level Gauges.....	279
5.9 Multi-Point Hydraulic Level Gauges.....	284
5.10 Full Profile Gauges.....	287
5.11 Multi-Point Vertical Tube Settlement Gauges.....	289
5.12 Surface Strain Meters.....	293
5.13 Soil Strain Gauges.....	296
5.14 Inductance Soil Strain Meters.....	299
5.15 Tape and Rod Extensometers.....	300
5.16 Tensioned-Wire Lateral Movement Gauges.....	304
5.17 Vibrating-Wire Extensometers.....	304
5.18 Multiple Rod Extensometers.....	306
5.19 Horizontal Strain Meters.....	307
5.20 Clinometers	309
5.21 Tension Crack Monitoring.....	310
5.22 Slip Plane Detectors.....	312
5.23 Tiltmeters.....	314
5.24 Deflectometers	320
5.25 Inclinometers.....	322
5.26 Factors Affecting the Accuracy of Inclinometers.....	323
5.27 Fixed-In-Place Inclinometers.....	326
5.28 Borehole Deviation Measurement.....	328
5.29 Sliding Micrometer Deformation Measuring Technique.....	330
5.30 Some Special Movement Measuring Instruments.....	334
5.31 Spot-Welded Strain Gauges.....	344
5.32 Longevity and Reliability of Movement Measuring Instruments..	345
5.33 Automatic Displacement and Settlement Plotting.....	347
Chapter 6	
Special Foundation Instruments and Their Uses	351
6.1 General.....	351
6.2 Borehole T.V. Cameras.....	352
6.3 Borehole Periscope.....	353
6.4 Rock Core Orientation Measurement.....	353
6.5 Multiple Shot Survey Instruments.....	355
6.6 Accelerometers	355
6.7 Temperature Sensors.....	363

6.8	Blast Pressure Measurement.....	364
6.9	Pressure Measurements in Silos.....	365
6.10	Special Instrumentation in Highway Engineering.....	368
6.11	Traffic Induced Strains.....	374
6.12	Acoustic Emission Instrumentation.....	376
6.13	Acoustic Emission Monitoring System Design.....	378
6.14	Microseismic Control Networks.....	380
6.15	Ground Vibrations — Principles of Instrumentation.....	381
6.16	Vibration Data Procurement and Processing.....	387
6.17	Ground Vibration Monitoring.....	388
6.18	Examples of Vibration and Blast Monitoring.....	392
6.19	Long Term Load Tests.....	396
6.20	Ground Freezing Instrumentation.....	403
6.21	Radioactive Waste Monitoring.....	409
6.22	Roof Failure Detection.....	410
6.23	Soil Compaction Monitoring.....	411
6.24	Instrumentation in Coal Mines.....	413
6.25	Avalanche Instrumentation.....	425
6.26	Non-Destructive Testing of Rock Bolts.....	431
6.27	Construction Equipment Instrumentation.....	431
6.28	Instrumentation of Plate Bearing Test.....	438
6.29	Continuous Measurement and Recording of Deflection of Structures.....	443
6.30	Pressure Cells for Concrete.....	444
6.31	Other Instruments.....	447

Chapter 7

The Performance of Instrumented Foundations and Foundation Structures.....

		451
7.1	Introduction.....	451
7.2	Foundations.....	451
7.2.1	Spread Foundations.....	452
7.2.2	Mat Foundations.....	454
7.2.3	Oil Tank Foundations.....	459
7.2.4	Settlement-Sensitive Foundations.....	464
7.3	Piles.....	467
7.3.1	Piles under Static Load.....	469
7.3.2	Pile Bending Instrumentation.....	471
7.3.3	Tension Piles.....	472
7.3.4	Lateral Load Testing of Piles.....	473
7.3.5	Ground Displacements During Pile Driving.....	479
7.3.6	Instrumentation of Pile Groups.....	483
7.3.7	Special Instrumentation for Piles.....	484
7.3.8	Instrumentation of Piles During Driving.....	489
7.3.9	Integrity Testing of Piles.....	493

7.4	Instrumentation of Fill Sites.....	494
7.5	Earth Retaining Structures.....	506
7.5.1	Diaphragm Walls.....	506
7.5.2	Bridge Abutments.....	507
7.5.3	Rigid Foundation Walls.....	512
7.5.4	Reinforced Earth Walls.....	513
7.5.5	Cofferdam Instrumentation.....	513
7.6	Strutted Excavations.....	517
7.6.1	Ground Movements near Excavations.....	518
7.6.2	Instrumentation of Trench Excavations.....	523
7.7	Ground Heave and Swelling.....	530
7.7.1	Ground Heave.....	531
7.7.2	Soil Heave/Swelling Monitoring.....	534
7.8	Movements Due to Dewatering.....	544
7.9	Ground Improvement.....	547
7.10	Instrumentation of Road Foundations and Highways.....	559
7.11	Ground Anchors.....	564
7.11.1	Anchored Wall Monitoring.....	567
7.11.2	Anchored Structures.....	569
7.12	Natural Slopes.....	571
7.13	Excavated Slopes.....	576
7.14	Rock Slopes.....	584
7.15	Tunnel Instrumentation.....	590
7.15.1	Buried Culverts.....	605
7.15.2	Cut and Cover Tunnels.....	608
7.15.3	Concrete Lining Behaviour in Pressure Tunnels.....	611
7.15.4	Tunnel Lining Measurements.....	616
7.15.5	Underground Caverns.....	617
7.16	Underground Mining Instrumentation.....	620
7.17	Case Histories of Microseismic Detection.....	626
7.18	Instrumentation of Offshore Structures.....	631
7.18.1	Differences Between Onshore and Offshore Instrumentation....	631
7.18.2	Types of Offshore Foundation Instrumentation.....	633
7.18.3	Instrumentation for Gravity Structures.....	633
7.18.4	Instrumentation for Piled Structures.....	639
7.19	Instrument Use in Embankment Dam Monitoring.....	640
7.19.1	Highway and Railroad Embankments.....	664
7.19.2	Flood Defence Embankments.....	670
7.19.3	General Aspects of Dam Instrumentation.....	678
7.20	Instrumentation at Laboratory Scale.....	684
7.21	General.....	684

Chapter 8	
Planning and Interpretation of Instrumentation Programmes	687
8.1 An Approach to Ground Engineering.....	687
8.2 The Organisation of a Project.....	689
8.3 The Planning of a Field Measurement Programme.....	690
8.4 The Selection of Instruments.....	693
8.5 Installation and Monitoring.....	694
8.6 The Procurement and Reporting of Field Data.....	700
8.7 Accuracy of Measurement.....	702
8.8 Planning of Observations with Respect to Safety and Deterioration.....	710
8.9 The Role of Model Tests in Instrumentation Planning.....	715
8.10 Data Acquisition Systems.....	718
8.11 Measurements During Construction.....	720
8.12 Measurements During Operation.....	721
8.13 The Use of Field Measurements in the Development of Computational Models.....	722
8.13.1 Rigid Permanent Structures.....	722
8.13.2 Piled Raft Foundations.....	728
8.13.3 The Behaviour of a Test Shaft in Rock.....	733
8.13.4 Earth Dams.....	737
8.13.5 Deep Excavations.....	740
8.13.6 Simulation of Room and Pillar Coal Mining.....	749
8.13.7 General.....	756
8.14 An Approach to Instrumentation for Field Scale Research Studies.....	758
8.15 Concluding Remark.....	759
