	Preface	xi
	Acknowledgements	xiii
1	Fundamental Principles	1
	Introduction	1
	Forces and stress	1
	Strain	7
	Determination of strain	13
	Stress-strain relationships and	
	elements of rheology	18
	Fluids in rocks and the importance of	
	effective stresses	24
	Brittle failure	26
	Temperature, time and scale effects	
	on rock strength	34
	Mechanisms of crystal deformation	38
2	Minor fractures – their nomenclature	
	and age relationships	42
	Introduction	42
	Basic fracture types	42
	Fracture surface features	45
	Timing of fracture development	47
	Fracture nomenclature and age	
	relationship criteria	48
	Commentary	59
3	Concordant and discordant intrusions	60
	Introduction	60
	Development of planar intrusions	61
	Cooling of planar intrusions	62
	Emplacement of dykes	64
	Emplacement of sills	76
	Laccoliths	80
	Polygonal fractures	83
	Commentary	87
4	Diapirs, related structures and	
	circular features	89
	Introduction	89
	Section I	
	Diapiric intrusions	89
	Emplacement of salt diapirs and	
	related structures	90
	Section II	
	Major igneous intrusions	102
	Section III	
	Circular features	110
	Impact tectonics	112

5	Faults – nomenclature, classification	123
	Introduction	122
	Fault nomenclature and movement	122
	Determination of direction and sense	123
	of movement	125
	Anderson's dynamics of faulting Seismic faulting and associated	127
	events	128
	Inclined principal stresses	131
	Shear failure on existing planes of	124
	weakness	134
	Commentary	137
6	Strike-slip faults	139
	Introduction	139
	Structures associated with strike-slip	
	faults	141
	Experimental studies	143
	Theoretical analyses	147
	Wrench-fault and indentation	
	tectonics	159
	Commentary	159
