Acknowledgments

Acknowledgments

Because of the length and breadth of subject material in this manual, it was necessary to seek the help of many people. These contributions were gratefully acknowledged. The author particularly wishes to thank the following people for their help in providing data, references, and other information: Frederick L. Pallet, Time A. Taylor, Joyce Taylor, and John S. McLean, my coauthor on the 1971 edition of this manual. I also wish to thank the Madison Land Company for their generous donation of time and effort in the review of the entire manuscript. John S. McLean provided an in-depth review of the manuscript with emphasis on the ground-water aspects of the manual. These people deserve much credit, but none of the blame for any mistakes that may remain.

Table of Contents

Abstract	1
Introduction	3
Purpose and scope	3
Background	5
How to use the manual	8
Why log?	9
Limitations of logging	10
Chapter 1	
How are logs analyzed?	13
Qualitative log analysis	13
Quantitative log analysis	16
Synergistic log analysis	17
Computer analysis of logs	21
Digitizing logs	22
Correcting and calibrating logs	23
Plotting data from logs	24
Chapter 2	
Petrophysics and log response	33
Mineral composition	33
Porosity	34
Particle size, shape, and cementation	35
Formation-resistivity factor	37
Rock structure	38
Chapter 3	
Ground-water flow and log response	41
Well hydraulics	41
Hydraulic conductivity and intrinsic permeability	42
Specific yield and moisture content	45
Chapter 4	
Interstitial fluids and log response	47
Electrical conductivity	47
Temperature	51
Chemical Composition	53

Chapter 5	
Borehole effects	53
Drilling fluids	55
Borehole diameter	55
Well construction	58
Chapter 6	
Geometric effects	61
Volume of investigation	61
Bed-thickness effects	62
Chapter 7	
Logging equipment	65
Probes	65
Cable and winch	67
Control modules	70
Recorders	73
Chapter 8	
Planning the logging program	77
Buying a logger	77
In-house service logging	78
Contract logging	78
Selection of the suite of logs	79
Chapter 9	
Quality control of logs	83
Prelogging contacts	83
Quality control at the well	84
Log headings	88
Chapter 10	
Calibration and standardization of logs	91
Calibration	92
Standardization	98
Test 1—Principles, equipment, and log-analyses techniques	100
Chapter 11	
Electric logging	103
Spontaneous-potential logging	103
Principles and instrumentation	103
Calibration and standardization	105

Volume of investigation	105
Extraneous effects	106
Interpretation and applications	106
Single-point resistance logging	110
Principles and instrumentation	110
Calibration and standardization	113
Volume of investigation	114
Extraneous effects	114
Interpretation and applications	115
Normal-resistivity logging	118
Principles and instrumentation	118
Calibration and standardization	122
Volume of investigation	122
Extraneous effects	124
Interpretation and applications	126
Focused-resistivity logging	128
Principles and instrumentation	128
Calibration and standardization	129
Volume of investigation	129
Extraneous effects	129
Interpretation and applications	131
Lateral-resistivity logging	131
Induction logging	132
Microresistivity logging	134
Dipmeter logging	134
Test 2—Electric logging	137
 Chapter 12	
Nuclear logging	139
Fundamentals of nuclear geophysics	139
Detection of radiation	141
Instrumentation	142
Counting statistics and logging speed	143
The use of radioactive sources in well logging	151
Gamma logging	155
Principles	156
Calibration and standardization	157
Volume of investigation	159
Extraneous effects	159
Interpretation and applications	161
Gamma-spectrometry logging	164
Principles	165
Calibration and standardization	168

Volume of investigation and extraneous effects	169
Interpretation and applications	169
Gamma-gamma logging	173
Principles	175
Calibration and standardization	176
Volume of investigation	178
Extraneous effects	179
Interpretation and applications	181
Neutron logging	183
Principles	184
Calibration and standardization	188
Volume of investigation	192
Extraneous effects	194
Interpretation and applications	198
Other nuclear-logging techniques	202
Neutron-activation logging	202
Neutron-lifetime logging	205
Nuclear magnetic-resonance logging	206
Test 3—Nuclear logging	207

Chapter 13

Acoustic logging	209
Acoustic-velocity logging	209
Principles and instrumentation	209
Calibration and standardization	212
Volume of investigation	213
Extraneous effects	214
Interpretation and applications	214
Acoustic wave-form logging	217
Acoustic-televiwer logging	220
Principles and instrumentation	220
Calibration and standardization	222
Volume of investigation	223
Extraneous effects	223
Interpretation and applications	225

Chapter 14

Caliper logging	231
Principles and instrumentation	231
Calibration and standardization	232
Volume of investigation	234
Extraneous effects	234

Interpretation and applications	234
Test 4—Acoustic and caliper logging	239

Chapter 15

Fluid logging	241
Temperature	241
Principles and instrumentation	242
Calibration and standardization	243
Volume of investigation	244
Extraneous effects	244
Interpretation and applications	245
Conductivity	251
Principles and instrumentation	251
Calibration and standardization	252
Extraneous effects	252
Interpretation and applications	253
Flow	254
Principles and instrumentation	255
Calibration and standardization	258
Extraneous effects	260
Interpretation and applications	262

Chapter 16

Well-construction logging	271
Casing logging	271
Cement and gravel-pack logging	273
Borehole-deviation logging	274
Test 5—Fluid and well-construction logging	276
