

CHEMICAL EQUILIBRIA AND KINETICS IN SOILS

Garrison Sposito

University of California at Berkeley

New York Oxford OXFORD UNIVERSITY PRESS 1994

CONTENTS

1 Chemical Equilibrium and Kinetics 3

- 1.1 Chemical Reactions in Soil 3
- 1.2 The Equilibrium Constant 6
- 1.3 Reaction Rate Laws 12
- 1.4 Temperature Effects 16
- 1.5 Coupled Rate Laws 19 Special Topic 1: Standard States 22 Notes 31 For Further Reading 33 Problems 33

2 Chemical Speciation in Aqueous Solutions 37

- 2.1 Complexation Reactions 37
- 2.2 Oxidation-Reduction Reactions 49
- 2.3 Polymeric Species 60
- 2.4 Multispecies Equilibria 67
 Special Topic 2: Electrochemical Potentials 75
 Notes 84
 For Further Reading 88
 Problems 89

3 Mineral Solubility 93

- 3.1 Dissolution-Precipitation Reactions 93
- 3.2 Activity-Ratio and Predominance Diagrams 102
- 3.3 Mixed Solid Phases 113
- 3.4 Reductive Dissolution Reactions 120

CONTENTS

3.5 Dissolution Reaction Mechanisms 125
 Notes 130
 For Further Reading 133
 Problems 134

4 Surface Reactions 138

- 4.1 Adsorption-Desorption Equilibria 138
- 4.2 Adsorption on Heterogeneous Surfaces 145
- 4.3 Adsorption Relaxation Kinetics 149
- 4.4 Surface Oxidation–Reduction Reactions 159
- 4.5 Transport-Controlled Adsorption Kinetics 166
 Notes 171
 For Further Reading 175

Problems 176

5 Ion Exchange Reactions 181

- 5.1 Ion Exchange as an Adsorption Reaction 181
- 5.2 Binary Ion Exchange Equilibria 187
- 5.3 Multicomponent Ion Exchange Equilibria 195
- 5.4 Ion Exchange Kinetics 203
- 5.5 Heterogeneous Ion Exchange 208
 Notes 214
 For Further Reading 216
 Problems 217

6 Colloidal Processes 222

- 6.1 Flocculation Pathways 222
- 6.2 The von Smoluchowski Rate Law 230
- 6.3 Scaling the von Smoluchowski Rate Law 238
- 6.4 Fuchsian Kinetics 243
- 6.5 The Stability Ratio 249
 Special Topic 3: Cluster Fractals 253
 Notes 257
 For Further Reading 261
 Problems 261

Index 265
