FOREWORD	IX	4 ROTARY DRILLING WITH ROLLING TRICONE BITS	48
PREFACE	XI	4.1 Introduction	48
ACKNOWLEDGEMENTS	XIII	4.2 Mounting and propulsion systems	48
1 ROCK DRILLING METHODS	1	4.3 Power sources	48
1.1 Introduction	1	4.4 Rotation systems	49
1.2 Types of drilling operations used in rock breakage	1	4.5 Pulldown/hoisting systems	50
1.3 Fields of application for the different drilling methods	1	4.6 Mast and pipe changer	51
1.4 Classification of the rocks and their principal physical properties	3	4.7 Control cabin	52
References	7	4.8 System for flushing drill cuttings	52
2 ROTARY PERCUSSIVE DRILLING	8	4.9 Drill string	53
2.1 Introduction	8	4.10 Auxiliary elements	55
2.2 Fundamentals of rotary percussive drilling	8	4.11 Operative practice. Drilling parameters	56
2.3 Top hammer drilling	10	4.12 Penetration rate	59
2.4 Drilling with down the hole hammer	16	4.13 Calculation of drilling costs	61
2.5 Advance systems	18	References	63
2.6 Mounting systems	19	5 ROLLING CONE ROCK BITS	64
2.7 Dust collectors	28	5.1 Rolling cone rock bits	64
2.8 Inclination instruments	30	5.2 Major components and design features	64
2.9 Penetration rate	30	5.3 The metallurgy of rolling cone rock bits	66
2.10 Average penetration rate	33	5.4 Types of rolling cone bits	67
2.11 Calculation of drilling costs	34	5.5 Bit type selection	67
References	35	5.6 Effects of the operating parameters on the rolling cone bits	69
3 ROTARY PERCUSSIVE DRILLING ACCESSORIES	36	5.7 Nozzle selection	69
3.1 Introduction	36	5.8 Evaluation of dull rolling cones	70
3.2 Types of threads	36	5.9 Example of roller tricone bit selection	71
3.3 Shank adaptors	37	5.10 IDAC Codes	71
3.4 Drill steel	38	References	71
3.5 Couplings	40	6 ROTARY DRILLING WITH CUTTING ACTION	72
3.6 Drill bits	41	6.1 Introduction	72
3.7 Calculation of the necessary drilling accessories	43	6.2 Fundamentals of drilling with cutting action	72
3.8 Care and maintenance of the bits	43	6.3 Flushing of drill cuttings	75
3.9 Care and maintenance of drill steel	47	6.4 Cutting tools	75
3.10 Guide for identifying accessory failure and its causes	47	References	76
References	47	7 SPECIAL DRILLING METHODS AND MOUNTING SYSTEMS	77
		7.1 Introduction	77
		7.2 Drilling through overburden	77
		7.3 Shaft sinking	79
		7.4 Raise driving	80

7.5 Jet piercing	83	12.2 Explosive cost	119
7.6 Water-jet drilling	84	12.3 Charge diameter	119
7.7 Drilling ornamental rock	85	12.4 Rock characteristics	119
References	86	12.5 Volume of rock to be blasted	121
8 COMPRESSORS	87	12.6 Atmospheric conditions	121
8.1 Introduction	87	12.7 Presence of water	121
8.2 Types of compressors	87	12.8 Environmental problems	121
8.3 Drive	89	12.9 Fumes	122
8.4 Auxiliary elements	89	12.10 Safety conditions	122
8.5 Calculating pressure drops	90	12.11 Explosive atmospheres	122
References	91	12.12 Supply problems	122
9 THERMOCHEMISTRY OF EXPLOSIVES AND THE DETONATION PROCESS	92	References	122
9.1 Introduction	92	13 BLASTING ACCESSORIES	123
9.2 Deflagration and detonation	92	13.1 Introduction	123
9.3 Detonation process of an explosive	93	13.2 Nonelectric initiation systems	123
9.4 Thermochemistry of the explosives	94	13.3 Electric initiation systems	127
9.5 Heat of explosion	94	13.4 Sources of energy	130
9.6 Oxygen balance	95	13.5 Other accessories	132
9.7 Volume of explosion	95	References	135
9.8 Minimum energy available	96	14 INITIATION AND PRIMING SYSTEMS	136
9.9 Temperature of the explosion	96	14.1 Introduction	136
9.10 Pressure of the explosion	96	14.2 Priming and boosting bulk ANFO-type blasting agents	136
References	97	14.3 Priming cartridge ANFO type blasting agents	138
10 PROPERTIES OF EXPLOSIVES	98	14.4 Priming pumped or poured slurry and emulsion blasting agents	139
10.1 Introduction	98	14.5 Priming cartridge watergel and emulsion blasting agents	140
10.2 Strength and energy	98	14.6 Location of primers	140
10.3 Detonation velocity	101	14.7 Priming conventional cartridge explosives	143
10.4 Density	102	References	143
10.5 Detonation pressure	102	15 MECHANIZED SYSTEMS FOR CHARGING AND DEWATERING BLASTHOLES	144
10.6 Stability	102	15.1 Introduction	144
10.7 Water resistance	102	15.2 Mechanized blasthole charging systems	144
10.8 Sensitivity	102	15.3 Blasthole dewatering systems	152
10.9 Detonation transmission	103	References	153
10.10 Desensitization	104	16 MECHANISMS OF ROCK BREAKAGE	154
10.11 Resistance to low temperatures	104	16.1 Introduction	154
10.12 Fumes	104	16.2 Rock breakage mechanisms	154
References	105	16.3 Transmission of the strain wave through the rock mass	156
11 INDUSTRIAL EXPLOSIVES	106	16.4 Energetic yield of the blastings	157
11.1 Introduction	106	References	159
11.2 Dry blasting agents	106	17 ROCK AND ROCK MASS PROPERTIES AND THEIR INFLUENCE ON THE RESULTS OF BLASTING	160
11.3 Slurries	110	17.1 Introduction	160
11.4 Emulsions	111	17.2 Rock properties	160
11.5 Heavy ANFO	113	17.3 Properties of the rock mass	161
11.6 Gelatin dynamites	115	References	166
11.7 Granular dynamite	115		
11.8 Permissible explosives	116		
11.9 Blackpowders	116		
11.10 Two-component explosives	117		
11.11 Explosives commercialized in Spain	117		
References	117		
12 EXPLOSIVE SELECTION CRITERIA	119		
12.1 Introduction	119		

18 CHARACTERIZATION OF THE ROCK		
MASSES FOR BLAST DESIGNING	167	
18.1 Introduction	167	
18.2 Diamond drilling with core recovery and geomechanic testing	167	
18.3 Characteristics of the joint systems	167	
18.4 Seismic survey	170	
18.5 Geophysical techniques to obtain rock mass data	170	
18.6 Logging of production blastholes	170	
18.7 Characterization of the rock mass during blasthole drilling	171	
18.8 The attempt to correlate drilling indexes with the blasting design parameters	174	
18.9 System of drilling data management in actual time	177	
References	178	
19 CONTROLLABLE PARAMETERS OF BLASTING	179	
19.1 Introduction	179	
19.2 Blasthole diameter	179	
19.3 Height of bench	181	
19.4 Blasthole inclination	181	
19.5 Stemming length	182	
19.6 Subdrilling	182	
19.7 Burden and spacing	183	
19.8 Blasthole patterns	183	
19.9 Geometry of the free face	184	
19.10 Size and shape of the blast	185	
19.11 Available expansion volume	186	
19.12 Charge configuration	186	
19.13 Decoupling of the charges	186	
19.14 Explosives	187	
19.15 Distribution of explosives in the blastholes	187	
19.16 Powder factor	188	
19.17 Initiation and priming	188	
19.18 Delay timing and initiation sequences	188	
19.19 Influence of loading equipment on the design of the blasts	189	
19.20 Specific drilling	189	
19.21 Blasthole deviation	190	
References	190	
20 BENCH BLASTING	191	
20.1 Introduction	191	
20.2 Small diameter bench blasting	191	
20.3 Large diameter blasting	193	
20.4 Bench blasting with horizontal blastholes	195	
20.5 Rip-rap production blasting	195	
20.6 Cast blasting	196	
Appendix 1: Formulas to calculate bench blasting patterns	199	
References	203	
21 BLASTING IN OTHER SURFACE OPERATIONS	205	
21.1 Introduction	205	
21.2 Excavations for highways and railways	205	
21.3 Trench blasting	208	
21.4 Ramp blasting (sinking cut)	210	
21.5 Blasting for ground leveling	212	
21.6 Blastings for foundations	213	
21.7 Mini-hole blasting	214	
21.8 Preblastings	215	
References	216	
22 BLASTING FOR TUNNELS AND DRIFTS	217	
22.1 Introduction	217	
22.2 Advance systems	217	
22.3 Blasting patterns for tunnels	218	
22.4 Types of cuts and calculation of the blasts	219	
22.5 Equipment for marking out drilling patterns	230	
References	230	
23 SHAFT SINKING AND RAISE DRIVING	231	
23.1 Introduction	231	
23.2 Shaft sinking	231	
23.3 Raise driving	232	
References	237	
24 UNDERGROUND PRODUCTION BLASTING IN MINING AND CIVIL ENGINEERING	239	
24.1 Introduction	239	
24.2 Crater retreat method	239	
24.3 Longhole method	243	
24.4 Sublevel stoping with blastholes in fan pattern	245	
24.5 Room and pillar mining	248	
24.6 Cut and fill mining	248	
24.7 Underground chambers in civil engineering projects	249	
References	251	
25 CONTOUR BLASTING	252	
25.1 Introduction	252	
25.2 Mechanisms responsible for overbreak	252	
25.3 The theory of contour blasting	253	
25.4 Types of contour blasts	254	
25.5 The parameters that intervene in a contour blasting	256	
25.6 Tendencies in the field of contour blasting	264	
25.7 Evaluation of the results	267	
25.8 Example	268	
25.9 Extraction of ornamental rock with contour blasting	268	
References	270	
26 UNDERWATER BLASTING	272	
26.1 Introduction	272	
26.2 Methods of execution	272	
26.3 Calculations for charges and drilling patterns	247	
26.4 Charging the blastholes and priming systems	275	
26.5 Types of explosives	276	
26.6 Environmental effects associated with underwater blastings	276	

26.7 Shaped or concussion charges	278	32 OPTIMIZING COSTS OF FRAGMENTATION WITH DRILLING AND BLASTING	323
References	279	32.1 Introduction	323
27 INITIATION SEQUENCE AND DELAY TIMING	281	32.2 Economical aspects of drilling and blasting	323
27.1 Introduction	281	32.3 Model for determining cost optimization	325
27.2 Single-row delayed blast	281	32.4 Predicting the fragmentation	326
27.3 Multi-row sequenced bench blastings	282	32.5 Probabilistic analysis optimization model	331
27.4 Bench blasting sequences for under-ground stopes	284	References	331
27.5 Delay timings	285	33 LAND VIBRATIONS, AIR BLAST AND THEIR CONTROL	333
27.6 Underground blasts in tunnels and drifts	287	33.1 Introduction	333
References	289	33.2 Parameters which affect vibration characteristics	333
28 EVALUATION OF BLAST RESULTS	290	33.3 Characteristics of ground vibrations	337
28.1 Introduction	290	33.4 Air blast characteristics	339
28.2 Fragmentation and swelling of the muckpile	290	33.5 Instrumentation for recording and analyzing vibrations and air blast	340
28.3 Geometry of the muckpile, its height and displacement	293	33.6 Calculators of propagation laws for land and air vibrations	342
28.4 Condition of the remaining mass	294	33.7 Studies of vibration and air blast	346
28.5 Analysis of the bench floor	295	33.8 Damage prevention criteria for buildings	350
28.6 Boulders in the muckpile	295	33.9 Effects of vibrations and air blast on people	357
28.7 Vibrations and airblast	296	33.10 Effects of vibrations on rock masses	358
28.8 Profiles of underground excavations	296	33.11 Effect of vibrations on freshly poured concrete	360
28.9 Conclusions	296	33.12 Recommendations for reducing ground vibration and air blast levels	361
References	296	References	364
29 SECONDARY FRAGMENTATION AND SPECIAL BLASTINGS	299	34 FLYROCKS AND THEIR CONTROL	366
29.1 Introduction	299	34.1 Introduction	366
29.2 Pop shooting	299	34.2 Models to calculate the throw of flyrock	366
29.3 Secondary breakage by mechanical means and special methods	299	34.3 Coverings	368
29.4 Special blastings	302	34.4 Recommendations for carrying out bench blastings	370
References	304	References	370
30 PLANNING THE WORK OF DRILLING AND BLASTING	305	35 SAFETY MEASURES FOR DRILLING AND BLASTING OPERATIONS	371
30.1 Introduction	305	35.1 Introduction	371
30.2 Factors that have influence on the planning of drilling and blasting	305	35.2 Blasthole drilling	371
30.3 Planning the stages of excavation	308	35.3 Blastings	375
References	311	References	381
31 STRUCTURE AND BUILDING DEMOLITION	312	CONVERSION FACTORS	382
31.1 Introduction	312	GENERAL INFORMATION, WEIGHT OF MATERIALS	383
31.2 Drilling diameters and types of explosives	312	GLOSSARY	385
31.3 Demolition of structural elements	313	SUBJECT INDEX	389
31.4 Demolition of structures	316		
31.5 Demolition of buildings	320		
31.6 Demolition of steel structures	322
