Preface

xiii

## Part I BASIC RELATIONSHIPS

### 1. The Task of Soil Physics

### 2. General Physical Characteristics of Soils

A. Introduction	5
B. Soil Physics Defined	6
C. Soil as a Disperse Three-Phase System	6
D. Volume and Mass Relationships of Soil Constituents	8
E. The Soil Profile	12
Sample Problems	14

## Part II THE SOLID PHASE

### 3. Texture, Particle Size Distribution, and Specific Surface

A. Introduction	21
B. Soil Texture	22
C. Nature of Clay	25
D. Soil Classes	28
E. Particle Size Distribution	30

F. Mechanical Analysis	31
G. Specific Surface	34
Sample Problems	37

#### 4. Soil Structure and Aggregation

A. Introduction	40
B. Types of Soil Structure	41
C. Structure of Granular Soils	42
D. Structure of Aggregated Soils	43
E. Characterization of Soil Structure	46
F. Aggregate Stability	49
G. Soil Crusting	51
Sample Problems	52

### Part III THE LIQUID PHASE

#### 5. Soil Water: Content and Potential

A. Introduction	57
B. The Soil-Water Content (Wetness)	58
C. Measurement of Soil Wetness	59
D. Energy State of Soil Water	64
E. Soil-Water Potential	66
F. Quantitative Expression of Soil-Water Potential	73
G. Soil-Moisture Characteristic Curve	75
H. Hysteresis	78
I. Measurement of Soil-Moisture Potential	80
Sample Problems	86

#### 6. Flow of Water in Saturated Soil

A. Introduction	90
B. Darcy's Law	92
C. Gravitational, Pressure, and Total Hydraulic Heads	95
D. Flow in a Vertical Column	97
E. Flux, Flow Velocity, and Tortuosity	99
F. Hydraulic Conductivity, Permeability, and Fluidity	100
G. Measurement of Hydraulic Conductivity of Saturated Soils	103
Sample Problems	104

#### 7. Flow of Water in Unsaturated Soil

A. Introduction	107
B. Comparison of Flow in Unsaturated versus Saturated Soil	107

C. Relation of Conductivity to Suction and Wetness	110
D. General Equation of Unsaturated Flow	113
E. Hydraulic Diffusivity	114
F. Measurement of Unsaturated Hydraulic Conductivity and Diffusivity in the Laboratory	117
G. Measurement of Unsaturated Hydraulic Conductivity of Soil Profiles <i>in Situ</i>	118
H. Vapor Movement	124
Sample Problems	126

### Part IV THE GASEOUS PHASE

#### 8. Soil Air and Aeration

A. Introduction	135
B. Volume Fraction of Soil Air	136
C. Composition of Soil Air	138
D. Convective Flow of Soil Air	139
E. Diffusion of Soil Air	142
F. Soil Respiration and Aeration Requirements	144
G. Measurement of Soil Aeration	147
Sample Problems	150

### Part V COMPOSITE PROPERTIES AND BEHAVIOR

#### 9. Soil Temperature and Heat Flow

A. Introduction	155
B. Modes of Energy Transfer	156
C. Conduction of Heat in Soil	158
D. Volumetric Heat Capacity of Soils	160
E. Thermal Conductivity of Soils	161
F. Thermal Regime of Soil Profiles	167
Sample Problems	172

#### 10. Soil Compaction and Consolidation

A. Introduction	176
B. Soil Compactibility in Relation to Wetness	177
C. Occurrence of Soil Compaction in Agricultural Fields	180
D. Pressures Caused by Machinery	181
E. Consequences of Soil Compaction	188

F. Control of Soil Compaction	189
G. Soil Consolidation	191
Sample Problems	196
<b>11. Tillage and Soil Structure Management</b>	
A. Introduction	200
B. Traditional and Modern Approaches to Tillage	201
C. Problems of Tillage Research	203
D. Operation of Tillage Tools	204
 <b>Part VI THE FIELD-WATER CYCLE AND ITS MANAGEMENT</b>	
<b>12. Infiltration and Surface Runoff</b>	
A. Introduction	211
B. "Infiltration Capacity" or Infiltrability	212
C. Profile Moisture Distribution during Infiltration	215
D. Infiltrability Equations	217
E. Basic Infiltration Theory	219
F. Infiltration into Layered Profiles	224
G. Infiltration into Crust-Topped Soils	226
H. Rain Infiltration	228
I. Surface Runoff	230
Sample Problems	231
<b>13. Internal Drainage and Redistribution Following Infiltration</b>	
A. Introduction	235
B. Internal Drainage in Thoroughly Wetted Profiles	236
C. Redistribution of Soil Moisture in Partially Wetted Profiles	238
D. Analysis of Redistribution Processes	240
E. "Field Capacity"	243
F. Summary of Factors Affecting Field Capacity	247
Sample Problems	248
<b>14. Groundwater Drainage</b>	
A. Introduction	250
B. Flow of Unconfined Groundwater	251

C. Analysis of Falling Water Table	252
D. Equations Pertaining to Flow of Unconfined Groundwater	254
E. Groundwater Drainage	256
F. Factors Influencing Drainage	259
G. Drainage Design Equations	261
Sample Problems	265
<b>15. Evaporation from Bare-Surface Soils</b>	
A. Introduction	268
B. Physical Conditions	269
C. Evaporation in the Presence of a Water Table	271
D. Hazard of Salinization Due to High Water Table	274
E. Evaporation in the Absence of a Water Table (Drying)	275
F. Analysis of the First and Second Stages of Drying	278
G. Reduction of Evaporation from Bare Soils	281
Sample Problems	283
<b>16. Uptake of Soil Moisture by Plants</b>	
A. Introduction	288
B. The Soil-Plant-Atmosphere Continuum	290
C. Basic Aspects of Plant-Water Relations	291
D. Root Uptake, Soil-Water Movement, and Transpiration	293
E. Classical Concepts of Soil-Water Availability to Plants	297
F. Newer Concepts of Soil-Water Availability to Plants	300
G. Irrigation, Water-Use Efficiency, and Water Conservation	301
<b>17. Water Balance and Energy Balance in the Field</b>	
A. Introduction	304
B. Water Balance of the Root Zone	305
C. Evaluation of the Water Balance	308
D. Radiation Exchange in the Field	309
E. Total Energy Balance	311
F. Transport of Heat and Vapor to the Atmosphere	313
G. Advection	315
H. Potential Evapotranspiration (Combination Formulas)	316
Sample Problems	319
<b>Bibliography</b>	321
