Preface	xii		
<b>PART ONE</b>			
<b>GENERAL PALAEONTOLOGICAL CONCEPTS</b>			
<b>1 Principles of palaeontology</b>			
1.1 Introduction	1	2.4 Competition and its effects	41
1.2 Occurrence of invertebrate fossils in Phanerozoic rocks	1	2.5 Summary of palaeontological evolution theory	43
1.3 Divisions of invertebrate palaeontology . . . . .	4	Bibliography	43
Taxonomy	6		
The species concept 6 Nomenclature and identification of fossil species 6 Taxonomic hierarchy 7 Use of statistical methods 9			
Palaeobiology	9		
Palaeoecology 9 Functional morphology, growth and form 15			
Palaeontology	16		
Classification of trace fossils 16 Uses of ichnology 18			
Stratigraphy	19		
Lithostratigraphy 20 Biostratigraphy 20			
Chronostratigraphy 21			
Biogeography	23		
<b>2 Theory of evolution</b>	26		
2.1 Introduction	26		
2.2 Darwin, the species and natural selection	27		
Inheritance and the source of variation	28		
Where does variation come from?	29		
Significance of alleles	30		
Mutation	30		
Spread of mutations through populations	31		
Isolation and species formation	32		
Genetic drift	32		
Natural selection today	33		
Multigene families and molecular drive	33		
2.3 Fossil record and modes of evolution	34		
Microevolution	35		
Macroevolution	36		
Species selection 37 The origins of higher taxa 37 Rates of evolution, adaptive radiations and extinction 39			
<b>3 Origin and early diversification of metazoans</b>	46		
3.1 Introduction	46		
3.2 Earliest metazoans	47		
Precambrian body fossils			
Medusoids 49 Pennatulaceans 49			
Annelids 49 Fossils of unknown affinities 50			
Precambrian trace fossils			
Palaeontology of the Precambrian/Cambrian boundary			
Large body fossils 51 Microfossils 51			
Biological evidence on metazoan relationships			
3.3 Major features of the Phanerozoic record	52		
The diversification of invertebrate life	54		
Changes in species diversity and habitat	55		
Problematic early Palaeozoic fossils	56		
Extinctions	57		
Possible causes of mass extinctions	58		
Bibliography	60		
<b>PART TWO</b>			
<b>INVERTEBRATE PHyla</b>			
<b>4 Sponges, archaeocyathids and stromatoporoids</b>	65		
4.1 Phylum Porifera: sponges	65		
Classification	67		
Class Demospongiae	68		
Class Calcarea	70		
Class Hexactinellida	70		
Geological importance	72		
Sponge reef	72		
4.2 Phylum Archaeocyatha	73		
Soft parts, organisation and ecology	74		
Distribution and stratigraphical use	75		
4.3 Phylum Stromatoporoidea	75		

## CONTENTS

Biological affinities	77	7.6 Ecology and distribution	155
Geological importance	77	Ecology of individual species	155
Bibliography	78	Pedicle attachment 155 Free-lying 156	
<b>5 Cnidarians</b>	<b>80</b>	Cementation 156 Quasi-infaunal 156	
5.1 Introduction	80	Brachiopod assemblages and 'community' ecology	158
5.2 The major characteristics and classes of Phylum Cnidaria	82	Ordovician palaeocommunities 158 Silurian palaeocommunities 158 Devonian brachiopod assemblages 160 Permian reef associations 161 Mesozoic brachiopod associations 162	
5.3 Class Hydrozoa	82		
Order Hydroidea	82		
Orders Milleporina and Stylasterina	83		
5.4 Class Scyphozoa	85		
5.5 Class Anthozoa	85	7.7 Faunal provinces	162
Subclass Ceriantipatharia	85	7.8 Stratigraphical use	163
Subclass Octocorallia	85	Bibliography	163
Subclass Zoantharia: corals	87		
Order Rugosa 88 Order Tabulata 101			
Order Scleractinia 103 Coral reefs 109			
Geological uses of corals 111 Corals as colonies: the limits of zoantharian evolution 113			
Bibliography	114		
<b>6 Bryozoans</b>	<b>117</b>		
6.1 Introduction	117	<b>8 Molluscs</b>	<b>166</b>
6.2 Two examples of living bryozoans	117	8.1 Fundamental organisation	166
<i>Bowerbankia</i>	117	8.2 Classification	168
<i>Smittina</i>	120	8.3 Some aspects of shell morphology and growth	169
6.3 Classification	121	Coiled shell morphology	170
6.4 Morphology and evolution	124	Septation of the shell	171
6.5 Ecology and distribution	127	8.4 Principal fossil groups	172
Shallow-water bryozoans	127	Class Bivalvia	172
Reef-dwelling bryozoans	128		
Deep-water bryozoans	128	<i>Cerastoderma</i> 172 Range of form and structure in bivalves 175 Classification of bivalves 179 Evolutionary history of bivalves 180 Bivalve functional morphology and ecology 181 Ecology and palaeoecology of bivalves 186 Stratigraphical use of bivalves 187	
6.6 Stratigraphical use	129	Class Rostroconchia	187
Bibliography	129	Class Gastropoda	188
<b>7 Brachiopods</b>	<b>130</b>		
7.1 Introduction	130	Introduction and anatomy of gastropods 188	
7.2 Morphology	130	Classification of gastropods 191 Shell structure and morphology of gastropods 191	
Class Articulata	131	Gastropod shell composition 192	
Morphology of three genera 131		Evolution of gastropods 192	
Preservation, study and classification of articulate brachiopods 136 Major features of brachiopod morphology 139 Endopunctuation and pseudopunctuation in brachiopod shells 143		Class Cephalopoda	195
Class Inarticulata	148		
<i>Lingula</i> 148 Taxonomy and evolution of the Inarticulata 150 Shell structure in inarticulates 150		Subclass Nautiloidea and relatives	
7.3 Ontogeny	151	196 Subclass Ammonoidea 202	
7.4 Classification	151	Subclass Coleoidea: dibranachiate cephalopods 215	
7.5 Evolutionary history	154	8.5 Predation and the evolution of molluses	218
		Bibliography	219
		<b>9 Echinoderms</b>	<b>223</b>
		9.1 Introduction	223
		9.2 Classification	223
		9.3 Subphylum Echinzoa	224
		Class Echinoidea	224
		Morphology and life habits of three genera 224 Classification of echinoids	
		230 Subclass Perischoechinoidea	
		231 Subclass Cidaroidea 236 <i>Bothriocidaris</i>	
		237 Subclass Euechinoidea and the	

## CONTENTS

morphological characters of echinoids		<b>11 Arthropods</b>	<b>299</b>
236 Evolution in echinoids 242		11.1 Introduction	299
Class Holothuroidea	245	11.2 Classification and general morphology	299
Class Edrioasteroidea	246	Diversity of arthropod types	299
<b>9.4 Subphylum Asterozoa</b>	247	Features of arthropod organisation	300
Subclass Asteroidea	248	<b>11.3 Phylum Trilobita</b>	302
Subclass Somasteroidea	249	General morphology of trilobites	302
Subclass Ophiuroidea	249	<i>Acaste downingiae</i>	304
Starfish beds	250	Detailed morphology of trilobites	305
<b>9.5 Subphylum Crinozoa</b>	250	Cuticle 306 Cephalon 308 Glabella 308	
Class Crinoidea	250	Cephalic sutures 308 Hypostome 310	
		Eyes 310 Cephalic fringes 313	
Main groups of crinoids 251 Palaeozoic crinoids 251 Mesozoic to Recent crinoids: articulates 255 Ecology of crinoids 256 Formation of crinoidal limestones 258		Enrollment and coaptative structures 315	
<b>9.6 Subphylum Blastozoa</b>	259	The trilobite thorax 317 The trilobite pygidium 317 Appendages of trilobites 318	
Classes Diplopita and Rhombifera: cystoids	259	Trilobite tracks and trails	321
Structural characteristics of cystoids 259		Walking movement in arthropods	
Pore structures of cystoids 259 Classification of cystoids 262 Cystoid ecology 262		321 Different kinds of trilobite trails 323	
Class Blastoidea	263	Life attitudes and habits of trilobites	325
Diversity and function of hydrospires 264		Ecdysis and ontogeny of trilobites	326
Classification and evolution of blastoids 264		Classification of trilobites	328
Ecology and distribution of blastoids 265		Evolution in trilobites	330
<b>9.7 Subphylum Homalozoa</b>	266	General pattern of evolution 330	
<b>9.8 Evolution</b>	268	Microevolution in trilobites 331	
Earliest echinoderms and their radiations	268	Trilobite faunal provinces	333
Evolution of the tube-feet	270	Stratigraphical use of trilobites	335
Why pentamery?	270	<b>11.4 Phylum Chelicerata</b>	335
Convergent evolution and intermediate forms	271	Class Merostomata	335
Bibliography	271	Subclass Xiphosura 335 Subclass Eurypterida 339	
		11.5 Phylum Crustacea	344
		Bibliography	347
<b>10 Graptolites</b>			
10.1 Structure	275	<b>12 Exceptional faunas</b>	<b>351</b>
Order Graptoloidea	275	12.1 Introduction	351
<i>Saetograptus chimaera</i> 275 <i>Diplograptus leptotheca</i> 277		12.2 Burgess Shale fauna	351
Order Dendroidea	278	Burgess Shale arthropods	352
<i>Dendrograptus</i> 278		Other Burgess Shale invertebrates	356
Preservation and study of graptolites	279	Significance of the Burgess Shale faunas	357
Ultrastructure and chemistry of the graptolite periderm	280	12.3 The Upper Cambrian of southern Sweden	358
10.2 Classification	282	12.4 Hunsrückshiefer fauna	359
10.3 Biological affinities	285	12.5 Mazon Creek fauna	361
10.4 Evolution	285	12.6 The Solnhofen lithographic limestone, Bavaria	363
Evolution in the shape of graptolite rhabdosomes	285	Bibliography	364
Evolution of the proximal end in graptoloids	289		
Thecal structure and its evolution	290		
<i>Cladia</i>	293		
10.5 How did graptolites live?	293		
10.6 Faunal provinces	295		
10.7 Stratigraphical use	296		
Bibliography	297		
		<b>Systematic index</b>	367
		<b>General index</b>	375
