Part II Radiogenic Isotope Geochronology and Applications

1 The Rb-Sr Method	75		75
1.1 Geochronology of Rb-Sr System	75	75	75
1.2 Principles of Dating	75	75	75
1.2a Fractionation Elements	75	75	75
1.2b Isotopes	75	75	75
1.2c Rb-Sr Data	75	75	75
1.3 Rb-Sr Isotopes	75	75	75
1.3a Structure of Rb-87	75	75	75
1.3b Rb-87 and Sr-87 Isotopic Composition	75	75	75
1.3c Rb-87 and Sr-87 Isotopic Composition in Earth	75	75	75
1.3d Rb-87 and Sr-87 Isotopic Composition in Planets	75	75	75
1.3e Rb-87 and Sr-87 Isotopic Composition in Meteorites	75	75	75
Preface	xxv		

Contents

Part I Principles of Atomic Physics	1
1 Nuclear Systematics	3
1.1 Discovery of Radioactivity	3
1.2 Internal Structure of Atoms	4
1.2a Nuclear Systematics	5
1.2b Atomic Weights of Elements	5
1.2c Binding Energy of Nucleus	7
1.2d Nuclear Stability and Abundance	7
1.3 Origin of the Elements	12
1.4 Summary	14
References	14
2 Decay Modes of Radionuclides	15
2.1 Beta-Decay	15
2.1a Beta- (Negatron) Decay	15
2.1b Positron Decay	19
2.1c Electron Capture Decay	21
2.1d Branched Beta-Decay	22
2.1e Energy Profiles of Isobaric Sections	23
2.2 Alpha-Decay	24
2.2a Parent-Daughter Relations	24
2.2b Alpha-Recoil Energy	25
2.2c Decay Scheme Diagrams	25
2.3 Spontaneous and Induced Fission	28
2.3a Spontaneous Fission	29
2.3b Induced Fission	29

2.3c	Nuclear Power Reactors	31
2.3d	Nuclear Waste	32
2.4	Summary	33
	References	33
3	Radioactive Decay	34
3.1	Law of Radioactivity	34
3.2	Radiation Detectors	37
3.2a	Geiger–Müller Counters	37
3.2b	Scintillation Counters	38
3.3	Growth of Radioactive Daughters	39
3.3a	Decay to an Unstable Daughter	39
3.3b	Secular Equilibrium	40
3.4	Units of Radioactivity and Dosage	42
3.5	Medical Effects of Ionizing Radiation	43
3.6	Sources of Environmental Radioactivity	46
3.7	Nuclear Reactions	47
3.8	Neutron Activation Analysis	47
3.9	Summary	53
	References	53
4	Geochronometry	55
4.1	Growth of Radiogenic Daughters	55
4.2	Assumptions for Dating	57
4.2a	Closed System	57
4.2b	Decay Constants	58
4.2c	Initial Abundance of Radiogenic Daughters	59
4.2d	Isochrons	59
4.2e	Terminology	60
4.3	Fitting of Isochrons	60
4.3a	Unweighted Regression	61
4.3b	Weighted Regression	61
4.3c	Goodness of Fit	62
4.4	Mass Spectrometry and Isotope Dilution	64
4.4a	Principles of Mass Spectrometry	64
4.4b	Equations of Motion of Ions	66
4.4c	Ion Microprobes	67
4.4d	Tandem-Accelerator Mass Spectrometers	68
4.4e	Isotope Dilution Analysis	68
4.5	Summary	71
	References	71

Part II Radiogenic Isotope Geochronometers 103

5 The Rb-Sr Method 75

5.1	Geochemistry of Rb and Sr	75
5.2	Principles of Dating	76
5.2a	Fractionation Correction	78
5.2b	Interlaboratory Isotope Standards	78
5.2c	Rb-Sr Dates of Minerals	79
5.3	Rb-Sr Isochrons	80
5.3a	Mesozoic Granite Plutons of Nigeria	81
5.3b	Stony and Iron Meteorites	83
5.3c	Martian Meteorites	85
5.3d	Lunar Rocks	88
5.4	Dating Metamorphic Rocks	89
5.4a	Isotopic Homogenization	89
5.4b	Carn Chuinneag Granite, Scotland	93
5.4c	Amitsoq Gneiss, Southwest Greenland	94
5.4d	La Gorce Formation, Wisconsin Range, Antarctica	94
5.5	Dating Sedimentary Rocks	95
5.5a	Geological Timescale	95
5.5b	Glaucconite	96
5.5c	Authigenic Feldspar	98
5.5d	Detrital Minerals	100
5.5e	Bentonite and Tuff	101
5.5f	Shale	102
5.6	Summary	106
	References	107

6 The K-Ar Method 113

6.1	Principles and Methodology	113
6.2	Retention of ^{40}Ar by Minerals	115
6.2a	Idaho Springs Gneiss, Colorado	116
6.2b	Snowbank Stock, Minnesota	117
6.2c	Excess ^{40}Ar	118
6.3	K-Ar Isochrons	120
6.4	Volcanic Rocks of Tertiary Age	121
6.4a	Rate of Motion of the Hawaiian Islands	122
6.4b	Magnetic Reversal Chronology	123
6.4c	Argon from the Mantle	125
6.5	Dating Sedimentary Rocks	126
6.5a	Shale	127

Contents

6.5b	Potassium-Rich Bentonites	128
6.5c	Volcanogenic Minerals in Sedimentary Rocks	129
6.5d	Metasedimentary Rocks	130
6.6	Metamorphic Veil	132
6.6a	Idaho Batholith	132
6.6b	Continental Crust	134
6.7	Precambrian Timescales	134
6.8	Summary	138
	References	138
7	The $^{40}\text{Ar}/^{39}\text{Ar}$ Method	144
7.1	Principles and Methodology	144
7.2	Incremental Heating Technique	147
7.2a	Marble Mountains, California	149
7.2b	Diabase Dikes in Liberia, West Africa	150
7.3	Excess ^{40}Ar	151
7.3a	Kola Peninsula, Russia	152
7.3b	Anorthoclase, Mt. Erebus, Antarctica	152
7.4	Argon Isotope Correlation Diagram	153
7.4a	Portage Lake Volcanics, Michigan	153
7.4b	Lunar Basalt and Orange Glass	155
7.5	Laser Ablation	157
7.5a	Dating Meteorite Impact Craters	158
7.5b	Sanidine Crystals, Yellowstone Park, Wyoming	158
7.5c	Intercalibrations	159
7.6	Sedimentary Rocks	159
7.6a	Loss of ^{39}Ar by Recoil	159
7.6b	Glaucite and Illite	160
7.7	Metasedimentary Rocks	162
7.7a	Meguma Group, Nova Scotia	162
7.7b	Barberton Greenstone Belt, Swaziland	163
7.7c	Dating of Low-K Minerals	164
7.8	Metamorphic Rocks: Broken Hill, N.S.W., Australia	166
7.9	Thermochronometry: Haliburton Highlands, Ontario, Canada	168
7.10	Summary	171
	References	172
8	The K-Ca Method	180
8.1	Principles and Methodology	180
8.1a	Pikes Peak Granite, Colorado	181
8.1b	Lunar Granite	182
8.2	Isotope Geochemistry of Calcium	183
8.2a	Radiogenic ^{40}Ca in Terrestrial Rocks	184

8.2b	Mass-Dependent Isotope Fractionation	185
8.2c	Isotope Anomalies in the Solar Nebula	189
8.3	Summary	190
	References	191
9	The Sm–Nd Method	194
9.1	Geochemistry of Sm and Nd	194
9.2	Principles and Methodology	197
9.2a	Isotope Fractionation and CHUR	197
9.2b	Model Dates Based on CHUR	199
9.2c	Isotope Standards	200
9.2d	Epsilon Notation	201
9.3	Dating by the Sm–Nd Method	202
9.3a	Onverwacht Group, South Africa	202
9.3b	Growth of the Continental Crust	204
9.4	Meteorites and Martian Rocks	207
9.5	Lunar Rocks	209
9.6	Summary	211
	References	211
10	The U–Pb, Th–Pb, and Pb–Pb Methods	214
10.1	Geochemistry of U and Th	214
10.2	Decay of U and Th Isotopes	215
10.3	Principles and Methodology	218
10.4	U, Th–Pb Dates, Boulder Creek Batholith, Colorado	221
10.5	Wetherill's Concordia	223
10.5a	Gain or Loss of U and Pb	225
10.5b	Morton Gneiss, Minnesota	226
10.5c	U–Th–Pb Concordia Diagrams	226
10.6	Alternative Pb Loss Models	227
10.6a	Continuous Diffusion	227
10.6b	Dilatancy Model	228
10.6c	Chemical Weathering	229
10.6d	Cores and Overgrowths	229
10.7	Refinements in Analytical Methods	230
10.7a	Purification of Zircon Grains	230
10.7b	SHRIMP	231
10.7c	LA-ICP-MS	232
10.7d	EMP	232
10.8	Dating Detrital Zircon Grains	233
10.8a	Potsdam Sandstone, New York	233
10.8b	Pontiac Sandstone, Abitibi Belt, Ontario/Quebec	234
10.9	Tera–Wasserburg Concordia	236

10.9a	Lunar Basalt 14053	238
10.9b	Other Applications of Tera–Wasserburg Concordia	239
10.10	U–Pb, Th–Pb, and Pb–Pb Isochrons (Granite Mountains, Wyoming)	240
10.10a	U, Th–Pb Isochrons	240
10.10b	Pb–Pb Isochrons	240
10.11	Pb–Pb Dating of Carbonate Rocks	242
10.11a	Marine Geochemistry of U, Th, and Pb	242
10.11b	Mushandike Limestone, Zimbabwe	243
10.11c	Transvaal Dolomite, South Africa	244
10.12	U–Pb and Th–Pb Isochrons of Carbonate Rocks	245
10.12a	Lucas Formation (Middle Devonian), Ontario	245
10.12b	Zn–Pb Deposits, Tri-State District, United States	247
10.12c	Speleothems of Quaternary Age	248
10.13	Summary	249
	References	250
11	The Common-Lead Method	256
11.1	The Holmes–Houtermans Model	256
11.1a	Decay of U to Pb	257
11.1b	Decay of Th to Pb	258
11.1c	Analytical Methods	258
11.1d	Primeval Pb in Meteorites	259
11.1e	The Age of Meteorites and the Earth	259
11.2	Dating Common Lead	261
11.2a	The Geochron	261
11.2b	Dating Single-Stage Leads	262
11.2c	Lead from Cobalt, Ontario	263
11.2d	Limitations of the Single-Stage Model	264
11.2e	The Stacey–Kramers Model	265
11.2f	Balmat, St Lawrence County, New York	267
11.3	Dating K-Feldspar	268
11.4	Anomalous Leads in Galena	270
11.4a	Two-Stage Model Dates	270
11.4b	Instantaneous Growth of Radiogenic Pb	271
11.4c	Continuous Growth of Radiogenic Pb	271
11.4d	Pb–Pb Isochrons	272
11.4e	Thorogenic Lead	272
11.4f	Unresolved Issues	273
11.5	Lead–Zinc Deposits, Southeastern Missouri	274
11.5a	Lead in the Ore Minerals	275
11.5b	Lead in Pyrite	277
11.5c	Synthesis	278

11.6	Multistage Leads	279
11.7	Summary	280
	References	281
12	The Lu–Hf Method	284
12.1	Geochemistry of Lu and Hf	284
12.2	Principles and Methodology	286
12.3	CHUR and Epsilon	288
12.4	Model Hf Dates Derived from CHUR	289
12.5	Applications of Lu–Hf Dating	290
12.5a	Amitsoq Gneiss, Godthåb Area, West Greenland	291
12.5b	D detrital Zircons, Mt. Narreyer, Western Australia	292
12.6	Summary	294
	References	294
13	The Re–Os Method	297
13.1	Rhenium and Osmium in Terrestrial and Extraterrestrial Rocks	297
13.2	Principles and Methodology	301
13.3	Molybdenite and ^{187}Re – ^{187}Os Isochrons	302
13.3a	Molybdenite	303
13.3b	^{187}Re – ^{187}Os Isochrons	303
13.3c	Chromite	304
13.4	Meteorites and CHUR-Os	305
13.4a	Iron Meteorites	305
13.4b	Chondrites	307
13.4c	CHUR-Os and $\varepsilon(\text{Os})$	308
13.4d	Model Dates	310
13.5	The Cu–Ni Sulfide Ores, Noril'sk, Siberia	310
13.6	Origin of Other Sulfide Ore Deposits	312
13.7	Metallic PGE Minerals	313
13.8	Gold Deposits of the Witwatersrand, South Africa	314
13.8a	Osmiridium	315
13.8b	Gold	315
13.8c	Pyrite	316
13.8d	The Solution to the Problem	316
13.9	The Pt–Os Method	316
13.10	Summary	317
	References	317
14	The La–Ce Method	322
14.1	Geochemistry of La and Ce	323
14.2	Principles and Methodology	324

14.3	La–Ce Isochrons	327
14.3a	Bushveld Complex, South Africa	327
14.3b	Lewisian Gneiss, Scotland	328
14.4	Meteorites and CHUR-Ce	329
14.5	Volcanic Rocks	331
14.6	Cerium in the Oceans	332
14.6a	Ferromanganese Nodules	332
14.6b	Chert	334
14.6c	Model Dates for Chert	336
14.6d	Seawater	336
14.7	Summary	337
	References	338
15	The La–Ba Method	340
15.1	Geochemistry of La and Ba	340
15.2	Principles and Methodology	341
15.3	Amitsoq Gneiss, West Greenland	342
15.4	Mustikkamäki Pegmatite, Finland	343
15.5	Summary	343
	References	343
Part III Geochemistry of Radiogenic Isotopes 345		
16	Mixing Theory	347
16.1	Chemical Compositions of Mixtures	347
16.1a	Two-Component Mixtures	347
16.1b	Sequential Two-Component Mixtures	348
16.1c	Three-Component Mixtures	349
16.2	Isotopic Mixtures of Sr	350
16.3	Isotopic Mixtures of Sr and Nd	352
16.4	Three-Component Isotopic Mixtures	355
16.5	Applications	356
16.5a	North Channel, Lake Huron, Canada	356
16.5b	Detrital Silicate Sediment, Red Sea	357
16.5c	Fictitious Rb–Sr Isochrons	359
16.5d	Potassic Lavas, Toro-Ankole, East Africa	360
16.6	Summary	361
	References	361
17	Origin of Igneous Rocks 363	
17.1	The Plume Theory	363
17.2	Magma Sources in the Mantle	364
17.3	Midocean Ridge Basalt	365

17.3a	Plumes of the Azores	366
17.3b	Undifferentiated Mantle Reservoir of Sr	367
17.4	Basalt and Rhyolite of Iceland	369
17.4a	Iceland and the Reykjanes Ridge	369
17.4b	Lead in Iceland Basalt	370
17.4c	Origin of Rhyolites	373
17.4d	History of the Iceland Plume	374
17.5	The Hawaiian Islands	375
17.5a	Isotopic Mixtures of Sr, Nd, and Pb	376
17.5b	Hafnium in Basalt of Oahu	377
17.5c	Osmium in Hawaiian Basalt	379
17.6	HIMU Magma Sources of Polynesia	380
17.7	Subduction Zones	382
17.7a	Mariana Island Arc	383
17.7b	Andes of South America	385
17.7c	Ignimbrites	387
17.8	Continental Flood Basalt	389
17.8a	Columbia River Basalt, United States	389
17.8b	Paraná Basalt, Brazil	392
17.9	Alkali-Rich Lavas	394
17.9a	Central Italy	394
17.9b	Leucite Hills, Wyoming, United States	395
17.10	Origin of Granite	399
17.10a	Batholiths of California	402
17.10b	Genetic Classification of Granites	403
17.11	Summary	405
	References	406
18	Water and Sediment	412
18.1	Strontium in Streams	412
18.1a	Rivers, Precambrian Shield, Canada	413
18.1b	Groundwater, Precambrian Shield, Canada	416
18.2	Sediment in Streams	419
18.2a	Murray River, N.S.W., Australia	419
18.2b	Fraser River, British Columbia, Canada	423
18.3	Zaire and Amazon Rivers	426
18.3a	Strontium and Neodymium in Water and Sediment	427
18.3b	Confluence at Manaus, Brazil	428
18.3c	Model Dates of Sediment, Amazon River	429
18.3d	Lead Isotopes, Zaire and Amazon	431
18.3e	Implications for Petrogenesis	432
18.4	Summary	433
	References	433

19 The Oceans	436
19.1 Strontium in the Phanerozoic Oceans	436
19.1a Present-Day Seawater	436
19.1b Phanerozoic Carbonates	438
19.1c Mixing Models	441
19.1d Sr Chronometry (Cenozoic Era)	444
19.1e The Cambrian “Explosion”	446
19.2 Strontium in the Precambrian Oceans	447
19.2a Late Proterozoic Carbonates	448
19.2b Snowball Earth Glaciations	449
19.2c Early Proterozoic and Archean Carbonates	450
19.3 Neodymium in the Oceans	451
19.3a Continental Runoff	451
19.3b Mixing of Nd in the Baltic Sea	453
19.3c Present-Day Seawater	455
19.3d Ferromanganese Nodules and Crusts	457
19.3e Water–Rock Interaction (Ophiolites)	461
19.4 Lead in the Oceans	463
19.4a Sorption of Pb ²⁺ by Oxyhydroxide Particles	464
19.4b Aerosols and Eolian Dust	465
19.4c Seawater and Snow	466
19.4d Ferromanganese Crusts	469
19.5 Osmium in Continental Runoff	470
19.5a Rivers	470
19.5b Soils	472
19.5c Lacustrine Ferromanganese Deposits	473
19.5d Anthropogenic Contamination	474
19.6 Osmium in the Oceans	475
19.6a Seawater	475
19.6b Meteoritic Dust	477
19.6c Ferromanganese Deposits	477
19.6d Isotopic Evolution during Cenozoic Era	478
19.7 Hafnium in the Oceans	480
19.7a Terrestrial Hf–Nd Array	480
19.7b Rivers and Seawater	481
19.7c Recent Ferromanganese Nodules	482
19.7d Secular Variations	484
19.8 Summary	486
