

Proceedings of the
27th International Geological Congress
Moscow 4-14 August 1984

Volume 20

MATHEMATICAL GEOLOGY AND GEOLOGICAL INFORMATION

Professor N. A. BOGDANOV
General Secretary of the
Organizing Committee

WVNU SCIENCE PRESS

Utrecht, The Netherlands
1984

CONTENTS

Preface	v
Objectives of mathematical geology E.H.T. Whitten	1
The principles of the mathematical simulation and the closeness-difference measure construction of the petrogenetical processes V.N. Bondarenko	17
Commingleing model and its criterion: Gul'shad layered intrusion (Nearbalkash region) A.B. Vistelius	35
Extending Markov models to two and three dimensions J.W. Harbaugh and Lin Cunshan	57
Concept mathematical models for the magmatic phenomena M.A. Romanova	63
Models for induced cyclic sedimentation W. Schwarzacher	85
Methodology of grains succession analysis in granite H. Thiergärtner	105
Geological forecasting as the problem of classification D.A. Rodionov	129
The boolean algebra methods in the metallogenic investigations S.V. Sirotinskaia	141

Complete simulation of the tonnage, shape and grade of a Saskatchewan uranium deposit, methodology and problems M. David, M. Dagbert, G. Sergerie and F. Cupcic	157
Interval estimations in the geological investigations R.I. Kogan	187
Discrete probability distributions for mineral deposits in cells F.P. Agterberg	205
Methodology and evaluation methods for solid mineral resources by means of a computer G.R. Bekzhanov, A.N. Bugaets and V.L. Los'	227
The development and utilization of resource data files for resource assessment within geoscience organizations J.L. Cook-Clark and A.L. Clark	245
Achievements of the GEOINFORM scientific-technical information system J. Hruska and S. Tesakov	261
Russian national version of multilingual thesaurus of geology Z.D. Moskalenko, A.N. Olejnikov and V.M. Dolgopolov	273
Jurassic of the USSR: composition and correlation with the standard scale G.Ya. Krymgolts and M.S. Mesezhnikov	287
