

SEDIMENTARY ROCKS

THIRD EDITION

F. J. PETTIJOHN

The Johns Hopkins University, Baltimore

HARPER INTERNATIONAL EDITION

HARPER & ROW, PUBLISHERS

New York, Evanston, San Francisco, and London

CONTENTS

PREFACE **xi**

1
INTRODUCTION **1**

Definitions	1
History of Sedimentology	2
Economic Value of Sediments	8
References	9
<i>Textbooks and General References</i>	10
<i>Laboratory and Field Manuals</i>	10
<i>Sedimentary Petrography</i>	11
<i>Sedimentation and Stratigraphy</i>	11
<i>Processes, Physical and Chemical</i>	11
<i>Sedimentary Environments, Ancient and Modern</i>	11
<i>Sedimentary Structures</i>	12
<i>Periodicals and Serials</i>	12

2
NATURE AND ORIGIN OF SEDIMENTARY ROCKS **13**

Introduction	13
Fabric	15
Composition	16
Classification	17
Total Volume and Mass of Sediment	19
Relative Abundance of the Common Sediments	21
References	22

3
THE TEXTURE OF SEDIMENTS **25**

Particle Size of Detrital Rocks	25
<i>Concept of Size</i>	25
<i>Size Terms</i>	27
<i>Classification of Sedimentary Aggregates</i>	31
<i>Grain Size Distributions</i>	34
<i>Grade scales</i>	34
<i>Representation of size</i>	

<i>frequency distributions</i>	36
<i>Characteristics of size frequency distributions</i>	38
<i>Mathematical nature of size frequency distributions</i>	40
Grain Size Distributions and Causal Factors	40
<i>Grain size and provenance</i>	41
<i>Grain size and transportation</i>	45
<i>Grain size and depositional processes</i>	48
Grain Size Distributions and Environmental Analysis	50
Summary	51
Shape and Roundness	52
<i>Shape (Form)</i>	52
<i>Roundness</i>	56
Surface Textures	61
<i>Polish versus Frost</i>	61
<i>Microrelief</i>	62
Fabric and Framework Geometry	64
<i>Fabric</i>	64
<i>Definitions and Concepts</i>	65
<i>Fabric Elements and Analysis</i>	65
<i>Symmetry Concepts and Fabric Types</i>	67
<i>Fabric of Sediments</i>	68
<i>Gravel fabric</i>	68
<i>Till fabric</i>	69
<i>Sand fabric</i>	69
<i>Fabrics of clays and shales</i>	70
<i>Fabrics of limestones and dolomites</i>	71
<i>Fossil orientation</i>	71
<i>Evaluation of Sedimentary Fabrics</i>	72
<i>Framework Geometry of Detrital Sediments</i>	72
<i>Packing</i>	72
<i>Porosity</i>	76
<i>Permeability</i>	77
Crystalline and Other Endogenous Fabrics	79
<i>Crystalline Textures</i>	80
<i>Crystal elements</i>	80
<i>The fabric of cements</i>	81
<i>Recrystallization fabrics</i>	82
<i>Textures of replacement and paragenesis</i>	82
<i>Fabrics of veins</i>	83
<i>Oolites, Spherulites, and Peloids</i>	83
<i>Oolites and pisolites</i>	83
<i>Spherulites</i>	87
Biogenic Fabrics	87
<i>Composition and Mode of Preservation</i>	88
<i>Petrology of Fossils</i>	89
References	89

INTERNAL ORGANIZATION AND STRUCTURE OF SEDIMENTARY ROCKS **100**

Introduction and Classification	100
Bedding	101

Internal Organization and Structure of Beds	103
Massive Bedding	103
Laminations	104
Internal Organization and Structure	104
Cross-Bedding and Ripple Marks	105
Ripple marks 109 • Ripple bedding 111	
Graded bedding	113
Growth bedding	117
Bedding Plane Markings and Structures	117
Sole Marks	117
Scour and tool marks 117 • Mud crack casts 120	
Load structures 120	
Surface Marks	121
Parting lineation 121 • Rill, swash, and related marks 122 • Rain, hail, and spray pits 122	
Mud cracks 122	
Deformed and Disturbed Bedding	123
Load Casts and Ball-and-Pillow Structures	124
Synsedimentary Folds and Breccias	124
Sandstone Dikes and Sills	126
Convolute Bedding	126
Stromatolites and Other Biogenic Structures	127
Stromatolites	127
Other Biogenic Structures	129
Introduction 129 • Classification 130	
Geological significance 131	
Diagenetic Structures	132
References	132
5	
GEOMETRY OF SEDIMENTARY BODIES	140
Introduction	140
Sandstone Bodies	141
Shoestring Sands	143
Complex Sand Bodies	145
Wedge-shaped (Fan) Sand Bodies	145
Sheet Sands	146
Sand Body Orientation	146
Sandstone Dikes, Sills, and Autointrusions	147
Carbonate Rock Geometry	148
Reefs	149
Mounds and Banks	149
Other Carbonate Bodies	150
Salt Domes, Stocks, and Anticlines	150
Filled Cavities and Sinks	151
Miscellaneous Sedimentary Bodies	152
References	152

GRAVELS, CONGLOMERATES AND BRECCIAS 154

Introduction	154
Modern Gravels	155
Fabrics and Composition of Gravels	157
Texture of Gravels and Conglomerates	157
Composition of Gravels and Conglomerates	161
Structure of Gravels and Conglomerates	162
Basic Differences Between Gravels and Sands	162
Classification of Gravels and Conglomerates	163
Orthoconglomerates	164
Orthoquartzitic Conglomerates	164
Petromict Conglomerates	167
Paraconglomerates (Conglomeratic Mudstone)	170
Laminated Pebbly Mudstone	170
Till and Tillite	171
Textures 172 • Structures of till 175	
Composition 176 • Stratigraphic aspects 176	
Distribution in time and space—examples 179	
Origin and geologic significance 180	
Tilloid ("Gerollton"): Nonglacial Pebbly Mudstones	180
Definitions 180 • Textures, structures, and composition of tilloids 181 • Stratigraphic associations 181 • Distribution in time and space 181 • Origin of tilloids 182	
Diagenesis of Conglomerates	183
Intraformational Conglomerates	183
Breccias	185
Cataclastic Breccia	186
Landslide and Slump Breccias	186
Collapse (Founder) and Solution Breccias	187
Pyroclastic Breccias	187
Impact or Fallback Breccias	187
Pseudoconglomerates and Pseudobreccias	188
References	188
7	
SANDS AND SANDSTONES	195
Introduction	195
Modern Sands	195
Properties of Sandstones	198
The Fabric of Sandstones	198
The Structures of Sandstones	200
The Mineralogy of Sandstones	200
Quartz, opal, and chalcedony 200 • Feldspar 202	
Rock fragments 204 • Micas 205 • "Heavy minerals" 206 • Calcite, dolomite, and siderite 207	
Clay minerals and other silicates 208	
Collophane 208	
Chemical Composition of Sandstones	208

Classification of Sandstones	209
Sandstone Petrography	213
Feldspathic Sandstones and Arkose	213
Definitions 213 • Arkose 213 • Fabric and composition 214 • Varieties and manner of occurrence 216 • Origin and geologic significance 218	
Lithic Sandstones and Subgraywackes	219
Definitions 219 • General description and varieties 219 • Occurrence and significance 222	
Graywackes and Related Rocks	224
Fabric and composition 225 • The matrix problem 227 • The soda problem 229 • Occurrence and geologic significance 230	
Quartz Arenites (Orthoquartzites)	230
Definitions 230 • Fabric and composition 231	
Distribution in time and space 232 • Origin and geologic significance 234	
Miscellaneous Sandstones	235
Greensand 235 • Phosphatic sandstones 236	
Calcareous sandstones 237 • Placer sands 238 • Itacolumite 238	
Diagenesis of Sandstone	238
Cementation	239
Decementation	245
Intrastratal Solution	245
Matrix	246
Fractured and Deformed Grains	246
Petrogenesis of Sandstones	246
References	250
8	
SHALES, ARGILLITES, AND SILTSTONES	260
Introduction	260
Definitions and Terminology	260
Textures and Structures	261
Grain Size and Fabric	261
Fissility	263
Laminations	264
Concretions and Other Structures	265
Mineral Composition of Shales and Argillites	265
The Clay Minerals	266
Composition and structure 266 • Base exchange 268 • Occurrence and origin of clay minerals 268	
Other Minerals of Shales	269
The Average Shale	269
Chemical Composition	270
Color	274
Diagenesis of Shales	275
Compaction	276

Diagenesis	276
Classification and Petrology of Shales	278
Classification	278
Residual Clays	279
Common Shales	281
Red Shales and Mudstones	282
Black (Carbonaceous) Shales	282
Siliceous Shales	284
Calcareous Shales and Marls	285
Miscellaneous Shales	285
Geological Occurrence of Mudstones and Shales	288
In the Modern World	288
In the Ancient World	289
Siltstones and Loess	290
Loess	290
Origin of Silt	291
References	292

9 VOLCANICLASTIC SEDIMENTS 299

Introduction and Definitions	299
Textures and Structures of Volcaniclastic Sediments	300
Composition	304
Petrography of Volcaniclastic Sediments	306
Classification	306
Petrography	306
Vitric tuffs 306 • Crystal tuffs 307 • Lithic tuffs 307 • Tuffaceous sedimentaries 308	
Alteration of Tuffs	308
Origin and Nature of Volcaniclastic Deposits	310
Primary Pyroclastic Sediments	310
Ash falls 310 • Ash flows 310 • Base-surge deposits 313 • Mudflows 313	
Secondary (Reworked) Pyroclastic Sediments	313
Epiclastic Volcanic Sediments	313
References	314

10 LIMESTONES AND DOLOMITES 316

Introduction	316
Definitions	316
Occurrence of Limestones	316
Economic Value of Limestones	317
General References	317
Modern Carbonate Sediments	318
Occurrence and Distribution	318
Shallow-water carbonates 318 • Deep-sea carbonates 319 • Freshwater carbonates 320	
Evaporitic carbonates 320 • Eolian carbonates 320	
Environments of Carbonate Deposition	320

Petrology of Modern Carbonate Sediments	321
Mineralogical and Chemical Composition	323
Carbonate Minerals	323
Silica and Silicates	324
Minor Constituents	325
Chemical Composition	326
Isotopic Composition	329
Textures and Structures of Limestones	330
Introduction	330
Allochems ("Framework" Elements)	330
Oolites 330 • Fossils 330 • Intraclasts 332	
Pellets 333	
Micrite	333
Sparry Calcite ("Spar")	334
Noncarbonate Components	335
Porosity of Carbonate Rocks	335
Bedding and Other Structures of Limestone	337
Hydrodynamic structures 337 • Growth fabrics and structures 338 • Nodular bedding 338	
Stylolites 340	
Classification of Limestone	342
Petrography of Limestones (and Dolomites)	348
Grainstones (Calcarenites and Calcirudites)	348
Boundstones (Reef-Rock)	354
Carbonate Mudstone (Calcilutites and Calcigranulites)	355
Allodapic (Graded) Limestones	357
Tufa, Travertine, and Marl	357
Caliche and Other Evaporitic Carbonates	358
Dolomite	359
Nomenclature 360 • Composition 361 • Textures and structures 361 • Occurrence and associations 364	
Diagenesis of Carbonate Rocks	365
Cements and Cavity Fillings	366
Solution	367
Grain Growth (Aggrading Neomorphism)	368
Grain Diminution (Micritization or Degrading Neomorphism)	368
Compaction	369
Limestone Replacement and the Dolomite Problem	369
Dedolomitization	371
Other Replacements	371
Diagenetic Paragenesis	372
Limestone Facies	372
Stromatolitic (Tidal Flat) Facies	372
Biohermal (Reef and Mound) Facies	373
Cross-Bedded (Winnowed Shelf) Facies	376
Allodapic (Basinal) Limestone Facies	377
Nodular Limestone Facies	376
Chalk (Pelagic) Facies	379

Evaporitic Carbonate Facies	379
Relations Between Facies	380
References	380

11 NONCLASTIC SEDIMENTS (EXCLUDING LIMESTONES) 392

Introduction	392
Chert and Other Siliceous Sediments	393
Definitions and Classification	393
Composition of Cherts	395
Mineralogic composition 395 • Chemical composition 396	
Petrography of Cherts	397
Geologic Occurrences of Cherts and Related Rocks	400
Origin of Chert	402
Silcrete	407
Iron-Bearing Sediments	407
Definitions	407
Mineralogy and Classification	408
Iron oxides 408 • Iron carbonates 409	
Iron silicates 409 • Iron sulfides 411	
Facies of Iron-Bearing Sediments	411
Bedded iron sulfides 411 • Bedded siderite 413	
Bedded iron oxides 414 • Bedded iron silicates 417	
Occurrence and Distribution of Iron-Bearing Sediments	418
Origin of Iron-Bearing Sediments	420
Diagenesis of Iron-Bearing Sediments	425
Glauconite	425
Phosphorites and Other Phosphatic Sediments	427
Introduction	427
Mineralogy and Chemical Composition	428
Petrology	429
Associations and Geologic Occurrence	431
Origin	432
Salines and Other Evaporites (Excluding Carbonates)	434
Definitions and Classifications	434
Modern Evaporites	434
Composition of Evaporites	435
Petrography of Evaporites	436
Occurrence of Evaporites	440
Origin of Evaporites	441
Carbonaceous Sediments	443
Introduction	443
Nature and Form of Organic Residues	444
Classification of Carbonaceous Sediments	445
The Coal Series	446
General characteristics and classification 446	
Chemical composition of coal 447 • Constituents of coal 448 • Occurrence of coal 451 • Origin of coal 451	
Oil Shales, Petroleum, and Natural Gas	452
References	453

12 CONCRETIONS, NODULES, AND OTHER DIAGENETIC SEGREGATIONS 462

Introduction	462
Definitions and Classifications	462
Origin	463
Carbonate Concretions and Nodules	464
Concretions of Sand and Siltstones	464
Kugelsandstein 464 • Imatra stones 465	
Sand crystals 466	
Calcareous Concretions of Shale	466
Septarian Nodules	469
Cone-in-Cone	470
Concretionary Layers and Veins	471
Caliche Nodules and Loess Concretions	472
Siliceous Nodules and Concretions	472
Chert Nodules	472
Geodes	474
Siliceous Connections in Bedded Sulfates	475
Phosphatic Concretions and Nodules	475
Iron-Oxide Nodules and Concretions	476
Pyrite and Marcasite Nodules and Crystal Aggregates	476
Barite Nodules and Rosettes	477
Gypsum Crystals and Crystal Clusters	478
Pseudoconcretions	478
Armored Mud Balls	478
Oncolites	479
Lake Balls	479
References	479

13 PROVENANCE 483

Introduction	483
Definitions and Concepts	484
Minerals and Source Rocks	484
Mineral Stability: In the Soil Profile	486
Mobility of the Oxides	488
Mineral Stability	489
Maturity	491
Mineral Stability: During Transit	493
Mineral Stability: Intrastratal	495
Heavy Mineral Zones	497
Mineral Stability: Theoretical and Other Considerations	499
Reading Provenance History	501
References	503

14 PALEOCURRENTS AND PALEOGEOGRAPHY 506

Introduction	506
Directional Structures and Fabric	508
Cross-Bedding, Ripple Mark and Paleocurrents	508
Sole-Marks and Paleocurrents	509
Fabric and Paleocurrents	511
Scalar Properties and Paleocurrents	512
Downcurrent Size Decline of Clasts	512
Roundness, Shape, and Paleocurrents	515
Compositional Properties and Paleocurrents	517
Bed Thickness, Isopachs, and Paleocurrents	519
Paleocurrents and Time	520
Paleocurrents and Basin Analysis	521
Facies Maps and Paleogeography	522
References	525

15 ENVIRONMENTAL ANALYSIS 530

Introduction	530
Concept of Environment	530
Environmental Parameters	531
Physical Parameters	532
The nature of the depositing medium 532 • The depth of water problem 534 • Current velocity, direction, and stability 536	
Chemical Parameters	537
Oxidation-reduction potential (Eh)	538
Alkalinity-acidity (pH)	539
Salinity	540
Temperature	541
Evaluation and Summary	542
Classification of Environments	543
Facies Models and Environmental Reconstruction	545
Introduction	545
Alluvial Environments	547
Alluvial fans 547 • Braided rivers 548 • Meandering rivers and fining-upward alluvial cycles 550	
Shore-Zone Environments and Cyclic Sequences	552
Prograding Delta and Coarsening-Upward Sequences	552
Interdeltaic Shoreline Environments	554
Barrier beach 554 • Lagoon and tidal marsh 556	
Prograding muddy shorelines 556 • Tidal-flat and tidal sequences 557	
The Carbonate Shelf Complex	558
The carbonate tidal-flat sequence 558 • The sabkha cycle 558 • The reef cycle 558	
Marine Environments	558
Shallow marine 560 • Turbidite ("graded-bedded") facies 560	

Interior Basin Environment 563
 The Glacial Model 564
 References 564

16
SEDIMENTATION AND TECTONICS 571

Introduction 571
 Cratons 572
 Geosynclines 575
 Orogenic Sediments 578
 Flysch 578
 Molasse 580
 Preflysch Facies 582
 The Geosynclinal Cycle 583

Geosynclines and Plate Tectonics 584
 References 585

17
SEDIMENTS AND EARTH HISTORY 588

Introduction 588
 Evolution of Soils 589
 Evolution of Shales 590
 Evolution of the Sandstones 591
 Evolution of the Carbonates 593
 Relative Abundance of the Common
 Sediments and Geologic Time 594
 Rate of Sedimentation 594
 Length of the Day and Lunar Tides 595
 The Question of the Early Atmosphere 596
 Summary and Critique 597
 References 597

INDEX OF NAMES 599

INDEX OF SUBJECTS 614
