
SEDIMENTARY STRUCTURES

SECOND EDITION

J.D. COLLINSON & D.B. THOMPSON

University of Bergen

Senior Lecturer in the Department of
Education at the University of Keele

London
UNWIN HYMAN
Boston Sydney Wellington

Contents

Preface to the second edition	v	5 Depositional structures in muds, mudstones and shales	54
Acknowledgements	vii	5.1 Introduction	54
List of tables	x	5.2 Structures and lamination	55
1 Introduction to the study of sedimentary structures	1	Reference and study list	59
1.1 The nature of this book	1	6 Depositional structures of sands and sandstones	60
1.2 The relationships of sedimentary structures to sedimentology and geology	2	6.1 Ripples and cross lamination	60
1.3 Sedimentary structures in relation to the nature of science and scientific methodology	2	6.2 Aqueous dunes, sandwaves, bars and cross bedding	75
Reference and study list	4	6.3 Aeolian dunes and cross bedding	86
2 Bedding	6	6.4 Flat beds and parallel lamination	100
2.1 The nature of bedding	6	6.5 Undulating smooth surfaces and lamination	102
2.2 The significance of bedding	13	6.6 Hummocky cross stratification	103
Reference and study list	17	6.7 Massive sand beds	104
3 Basic properties of fluids, flows and sediment	19	6.8 Graded beds and the Bouma Sequence	105
3.1 Introduction	19	Reference and study list	106
3.2 Properties of low-viscosity fluids and flows	19	7 Depositional structures in gravels, conglomerates and breccias	111
3.3 Waves	25	7.1 Introduction	111
3.4 Properties of sediments moved by flows	26	7.2 Problems of classification	111
3.5 Erosion	28	7.3 Morphology and general settings of gravel deposition	112
3.6 Modes of sediment transport	30	7.4 Structures and other descriptive features: their mode of formation	114
3.7 Sediment gravity flows	31	7.5 Processes of formation of mass properties and structures	125
3.8 Pyroclastic processes	34	7.6 Uses of structures	126
Reference and study list	34	Reference and study list	128
4 Erosional structures	37	8 Depositional structures of chemical and biological origin	131
4.1 Introduction	37	8.1 Introduction	131
4.2 Sole marks	37	8.2 Chemical precipitation	131
4.3 Small-scale structures on modern and ancient upper surfaces	46	8.3 Precipitation and binding of sediment by organisms	134
4.4 Erosional features in vertical section	47	8.4 Early cementation	140
Reference and study list	52	8.5 Other bedding phenomena in limestones	142
		Reference and study list	143

CONTENTS

9 Structures due to deformation and disturbance 145

9.1 Introduction 145

9.2 Physically induced soft-sediment deformation 145

9.3 Chemically induced disturbance 159

9.4 Biogenic sedimentary structures: trace fossils 166

Reference and study list 182

10 The study of assemblages of structures 186

10.1 Introduction 186

10.2 Collection and presentation of data 186

10.3 Analysis, interpretation and evaluation of data 191

Reference and study list 195

Appendix A Restoration of directional data from tectonically inclined beds 200

Appendix B Collection and preservation of structures from unconsolidated sediments as box cores and lacquer peels 201

Index 202

List of tables

6.1 The classification of aeolian bedforms 89

6.2 Internal dune structures 93

9.1 A morphological classification of some common invertebrate trace fossils 170

10.1 Dip and dip direction of cross bedded foresets in beds with a tectonic dip 187
