I Preparedness for climate change impact on slope safety **I**

K.K.S. Ho, S. Lacasse & L. Picarelli

Abstract	1
1.1 JTC1 initiative on climate change impact on slope safety	2
1.2 Key findings of different countries/regions	3
1.3 Prediction of changing weather pattern	4
1.3.1 Methodology	5
1.3.2 Predictions and uncertainties	6
1.3.3 Potential landslide risk and current climate models	6
1.4 Changing landslide pattern under changing climate	7
1.4.1 Types of landslides	8
1.4.2 Key climate change factors	8
1.4.3 Issues hampering understanding of climate change impact on landslide occurrence	9
1.4.4 What is an extreme event?	9
1.4.5 Extreme weather events	10
1.4.6 Extreme landslide scenarios	10
1.4.7 Approaches to quantify impact of climate change on slope safety	11
1.4.7.1 Mechanics-based models	12
1.4.7.2 Systems-based scenario assessment	12
1.4.7.3 Key findings from scenario-based assessments	13
1.4.7.4 Stress testing	14
1.4.8 Does climate change need to be a priority in landslide risk assessment?	16
1.4.8.1 Safeland project	17
1.4.8.2 CHANGES Project	18
1.5 Landslide risk management	19
1.5.1 Quantifying the uncertainties	19
1.5.2 Insights from scenario-based assessments	20
1.5.3 Managing extreme weather events	21
1.5.4 Institutional issues and addressing the policy gap	22
1.5.5 Application of improved technology and methods	23
1.5.6 National and international cooperation	24

1.5.7	Coordination with flood risk management experts	24
1.5.8	Enhanced communication	25
1.5.9	Formulating strategies for a way forward	25
1.6	Emerging needs	26
1.6.1	Need for more geotechnical research	26
1.6.2	Enhanced emergency preparedness for extreme weather events	27
1.7	Conclusions	27
	Acknowledgements	29

4	Enhancing slope safety preparedness for extreme rainfall and potential climate change impacts in Hong Kong	105
	<i>K.K.S. Ho, H.W. Sun, A.C.W. Wong, C.F. Yam & S.M. Lee</i>	
	Abstract	105
4.1	Introduction	105
4.2	Evolution of slope safety system up to 2008	106
4.3	The severe rainstorm in June 2008	109
4.4	Consideration of extreme rainfall events	112
4.4.1	Climate change and rainfall studies	113
	4.4.1.1 Globally observed changes in extreme rainfall and future projections	113
4.4.2	Observed changes in extreme rainfall over China and future projections	114
4.4.3	Observed changes in extreme rainfall in Hong Kong	115
4.4.4	Downscaling strategy in climate projection	117
4.4.5	Rainfall projections for Hong Kong in the 21st century	118
4.4.6	Recent update of Probable Maximum Precipitation (PMP) estimate for Hong Kong	118
4.4.7	Geological evidence on relationship between landslide activity and climate change	122
4.4.8	Landslide patterns corresponding to extreme rainfall	124
4.4.9	Rainfall-landslide correlations for man-made slopes	124
4.4.10	Rainfall-landslide correlations for natural hillsides	126
4.4.11	Extreme rainfall scenarios	127
4.4.12	Change in landslide portfolio with development of extreme rainfall	129
4.4.13	Assessment of extreme landslide scenarios	129
4.4.14	Impact of Level-1 extreme rainfall	131
4.4.15	Impact of Level-2 extreme rainfall based on 85%/90% PMP ₁₉₉₉	132
4.4.16	Impact of Level-2 extreme rainfall based on transposition of Typhoon Morakot to Hong Kong with climate change effect projected to the end of 21st century	132
4.4.17	Landslide risk due to extreme rainfall and climate change	133
4.4.18	Evaluating the capacity of landslide emergency management system	134
4.5	Adaptation strategies for managing extreme landslide events	135
4.5.1	Promulgate enhanced technical guidance and promote more robust mitigation measures	136
4.5.2	Low-frequency, large-magnitude landslides	137
4.5.3	Systematic implementation of mitigation measures on existing features posing highest risks to community	138
4.5.4	Improving crisis preparedness	138
4.5.5	Enhancing and streamlining landslide emergency services	139
4.5.6	Enhancing landslide warning system	140
4.5.7	Enhancing coordination of Government emergency services	140

4.6	Further work	141
4.6.1	Strengthening and streamlining existing landslide emergency system	141
4.6.2	Need to consider concurrent multiple hazard scenarios	142
4.6.3	New strategy for landslide emergency management under extreme rainfall condition	142
4.7	Other initiatives	143
4.8	Discussion and conclusions	144
	Acknowledgements	146
