Preface v

SESSION 15 Fold Morphology 309
   Introduction 309
   Definitions: a single folded surface 309
   Fold dimensions 311
   Fold shape 313
   Fourier analysis of fold form 314
   Questions 317
   Starred (**) questions 322
   Answers and comments 322
   Wavelength—amplitude analysis 322
   Visual harmonic analysis 326
   Calculation of Fourier coefficients 327
   Axial trace construction 327
   Symmetry of small scale folds 329
   Keywords and definitions 329
   Key references 332

SESSION 16 Fold Orientations: Projection Techniques 333
   Introduction 333
   Fold axis 334
   π-diagrams 334
   β-diagrams 335
   Axial surface 336
   Axial trace 336
   Crest plane trace 336
   Questions 336
   Starred (**) question 339
   Answers and comments 339
   Concluding remarks 344
   Keywords 344
   Key references 344

SESSION 17 Fold Classification 347
   Introduction 347
   Fold classification using layer thickness variations (Ramsay, 1967) 348
   Questions 349
   Starred (**) questions 351
   Answers and comments 354
   Layer thickness variations 354
   Dip isogons 356
   t' equations describing fold shape 357
   Flattened folds 358
   Fold shape in flattened parallel folds 359
### SESSION 18 Fold Sections and Profiles

**Introduction**

Cross section and profile construction

**Questions**

Effects of topographic variation on profile construction methods

The Busk Construction

Fold reconstruction using isogons

Starred (*) questions

Answers and comments

Concluding comments

**Keywords and definitions**

**Key references**

---

### SESSION 19 Fold Mechanisms: 1. Single Layers

**Introduction**

Questions

Starred (*) question

Answers and comments

Wavelength—thickness relationships: theory

Wavelength—thickness relationships: measurement

Dependence of fold shape on viscosity contrast in single layer buckles

High competence contrasts

Low competence contrast

Cuspate-lobate folds

Assessing competence contrasts

Progressive shape changes during folding

**Keywords and definitions**

**Key references**

---

### SESSION 20 Fold Mechanisms: 2. Multilayers

**Introduction**

Questions

Starred (*) question

Answers and comments

Properties of folds in multilayers deduced from the theory of single layer buckling

Change of fold shape with packing distance of competent layers

Fold styles in multilayers

Folds developed independently of gravitational force

Folds developed under the influence of gravitational force

Anisotropy

Geometric development of chevron folds from conjugate kinks

Synchronous development of two kink bands

Mechanisms of nucleation and propagation of conjugate kink folds

Kink band geometry and stress axes

Crenulation cleavage

**Keywords and definitions**

**Key references**

---

### SESSION 21 Strain and Small Scale Structures in Folds

**Introduction**

Questions

Starred (*) questions

---

### CONTENTS

**Fold shape in flattened Class 3 folds**

**Laboratory formed folds**

**Sorby's "fish-hook" folds**

**Keywords and definitions**

**Key references**

---

**SESSION 22 Superposed Folding**

**Introduction**

Questions and starred (*) questions

Answers and comments

The folding of non-parallel surfaces

Superposed shear folds

Fold interference patterns

General discussion of interference patterns

Geometric analysis of superposed folds using projection techniques

**Keywords and definitions**

**Key references**

---

**SESSION 23 Fault Geometry and Morphology**

**Introduction**

Nomenclature of faults

Questions

Starred (*) question

Answers and comments

Determination of the movement direction on a fault surface

Calculation of the movement vector on a fault surface

Internal geometry of ramp-flat thrust sheets

**Keywords and definitions**

**Key references**

---

**SESSION 24 Faults and the Construction of Balanced Cross Sections**

**Introduction**

Questions and starred (*) questions

Answers and comments

Construction of an undeformed template

Line length balancing: Example 1

Line length balancing: Example 2

Calculation of the depth to detachment

Line length balancing in strained rocks

Correction of layer thickness in strained rocks

Concluding comments

**Keywords and definitions**

**Key references**

---

**SESSION 25 Mechanical Analysis of Fractures**

**Introduction**

Force and stress

Stress—strain relationships in a homogeneous, isotropic, elastic body

Questions

Laboratory tests for rock failure

P-wave first motion analysis

Shatter cone geometry

**Keywords and definitions**

**Key references**
