THE PHYSICS OF THE EARTH'S CORE

AN INTRODUCTION

by

PAUL MELCHIOR

Dr. Sc., Director of the Royal Observatory of Belgium, Bruxelles & Professor at the Catholic University, Louvain-la-Neuve

PERGAMON PRESS

Contents

	Intro	oduction		1
	Bibl	iography		4
	Add	itional references		5
1	THE MODEL OF THE EARTH			6
	11	Shape and dimensions of the model		6
	1.2	The rotation of the model of the Earth		9
	1.3	Gravity and pressure inside the Earth		19
	1.4	Seismological model for the internal structure of the Earth		21
	1.5	Stratification of the liquid core		33
	1.6	Topography of the core-mantle interface		38
		Bibliography		41
2	THE	ERMODYNAMICS		44
	2.1	Fundamental thermodynamic relations		44
	2.2	Definitions of fundamental thermodynamic parameters		46
	2.3	Adiabatic gradient of temperature		47
	2.4	The Wiedemann-Franz law		48
	2.5	Measurements of electrical conductivity		49
	2.6	The Grüneisen parameter		52
	2.7	Introduction of the Grüneisen parameter in fundamental relations		56
	2.8	The Clausius Clapeyron Equation		57
	2.9	Lindemann's law of fusion		59
	2.10	Chemical constitution of the liquid core		60
	2.11	The temperature profile inside the Earth		63
	2.12	Two "core paradoxes"		67
	2.13	Transport properties – diffusivity and conductivity		68
	2.14	Heat flow from the core		70
	2.15	Viscosity		14
	2.10	Bibliography		81
2	ну	DRODVNAMICS		84
-	31	Lagrangian and Eulerian descriptions	A. Sar	84
	3.2	Educations of conservation		86
	3.3	Dimensionless characteristic numbers in hydrodynamics		92
	3.4	Helmholtz equation		95
	3.5	Geostrophic flow. Taylor columns		95
	3.6	Classical approximations		99
	3.7	Differential equations of the perturbed pressure in a rotating spheroid	1	102
	3.8	Boundary condition for the reduced pressure	1	109
	3.9	Solution of the Poincaré equation by separation of variables	1	109
	3.10	Greenspan equation in cylindrical coordinates	1	111
	3.11	A Poincaré equation for the velocity field	1	112
	3.12	Stratified fluids, internal gravity waves	1	113
	3.13	Turbulence in hydrodynamics	1	121

	3.14	The boundary layers in hydrodynamics	126
	3.15	Rotating fluid – elementary properties of the viscous	
		Ekman boundary layer	132
	3.16	The rotating vertical cylinder: Stewartson sidewall boundary layers	136
	3.17	Spin-up, Ekman suction	139
	3.18	Thermal instability—the Rayleigh number	140
	3.19	An application of Navier equation and boundary layer theory to the	
		problem of differential rotation speed of the core and mantle of the Earth	142
		Bibliography	149
1	GEO	MAGNETISM	153
	4.1	Fundamental laws of electromaanetism	153
	4.2	Main features of the geomagnetic field	157
	4.3	Penetration of the maanetic field and currents into the	
		lower mantle: skin depth	165
	4.4	Analogy between the magnetic induction equation	
		and the vorticity equation	166
	4.5	Magnetic dimensionless characteristic numbers	167
	4.6	Lorentz force and Maxwell stresses	168
	4.7	Magnetohydrodynamic waves: the Alfvén waves	170
	4.8	Magnetostrophic waves	173
	4.9	The Hartmann number	176
	4.10	Hydromagnetic boundary layers	177
	4.11	Energy budget	185
	4.12	The geodynamo	190
	4.13	Fluid movements in the core	196
	4.14	Electric radius of the core	200
		Bibliography	203
	GEO	PHYSICAL IMPLICATIONS IN THE FARTH'S CORE	209
	SI	Review summary of the different kinds of ways in the care:	207
	5.1	classification and terminology	200
	52	Possible sources of mechanical energy to entertain connection	207
	2.4	in the Farth's core	212
	53	Gravitational potential energy liberated during the formation	
	5.5	of the inner core	214
	54	Some remarks about the boundary layers	215
	5.5	Core-mantle coupling	218
	0.0	Bibliography	229
		and in the second se	222
	App		232
		Correspondence of units currently used in internal geophysics	232
		The Earth	233
		The Earth's core	234
		Thermodynamic properties of the Earth's core	234
		Electromagnetic properties of the Earth's core	233
		Dimensionless numbers in the Earth s core	233
		The Earth's inner core	233
		Differential operators and jundamental formulas	23/
		Toroidal and poloidal vectorial fields	240
